Introduction

Flexera's Software Vulnerability Manager (formerly called Software Vulnerability Manager 2019) is a vulnerability and patch management software solution that facilitates a customized patch management process. It combines vulnerability intelligence, vulnerability scanning, and patch creation with patch deployment tool Integration to enable targeted, reliable, and cost-efficient patch management.

Vulnerability and patch management are critical components of any security infrastructure because they enable proactive detection and remediation of vulnerabilities before they are actively exploited and your security compromised. With Software Vulnerability Manager, IT operations and security teams are empowered to prevent vulnerability threats from both Microsoft and non-Microsoft (third-party) product vulnerabilities, covering Microsoft Windows, macOS, and Red Hat Enterprise Linux.

Software Vulnerability Manager integrates seamlessly with Microsoft® WSUS and System Center Configuration Manager.

New Features and Enhancements

Software Vulnerability Manager (Cloud Edition) includes the following new features and enhancements:

- [Patch Automation](#)
- [Import Bulk File Paths in SVM Patch Wizard](#)

Note • To see the following new features and enhancements in your Software Vulnerability Manager (Cloud Edition) interface, you must refresh your browser's cache (press Ctrl+F5).

Patch Automation

With this release of Software Vulnerability Manager, you can automate publishing of patches. To do so, right click on any SPS template or VPM patch and select **Subscribe to Patch** from the context menu.

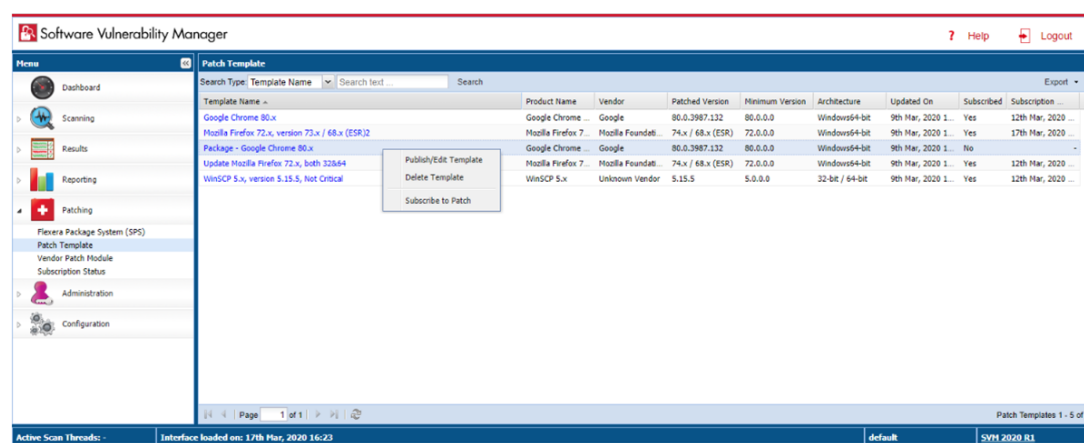

Figure 1: Selecting Subscribe to Patch from the Context Menu

On the **Configure Subscription** dialog box, you can choose to always publish a new patch when a new version becomes available, or you can choose to only automate publishing a new patch when certain criteria are met (recommended).

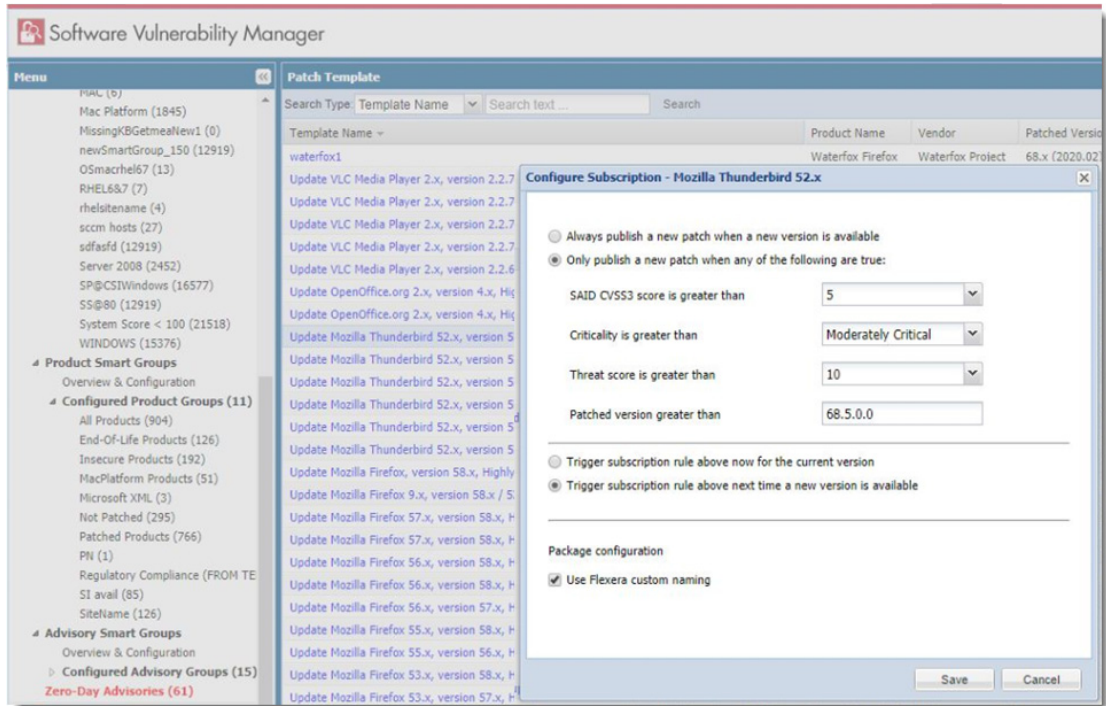

Figure 2: Configure Subscription Dialog Box

Patch automation is delivered via a new version of the Flexera SVM Patch Configuration (Version 2.x) tool, which is part of the Software Vulnerability Manager Client Toolkit. For more information on the toolkit, visit the [SVM Toolkit](#) blog in the Flexera Community.

The SVM Toolkit installer contains updates to the Flexera SVM Patch Configuration tool as well as some optional tools documented in our online community. The SVM Toolkit installer can be downloaded at:

<https://resources.flexera.com/tools/SVM/SVMClientToolkitInstall.msi>

Note • If you are already have the SVM Toolkit installed, the installer will upgrade you to the latest version.

You can see the status and details of patches published automatically on a new page named **Subscription Status**, which is opened by selecting **Subscription Status** on the **Patching** menu.

In an upcoming release, Software Vulnerability Manager will also be introducing an option to get a daily/weekly activity digest via email.

Import Bulk File Paths in SVM Patch Wizard

To help with situations where you wish to include specific file paths for scanning software, you can now import multiple file paths by providing a CSV file during Step 3 of the patch/template creation process (CSIL-9630).

On the **Step 3 of 4: Applicability Criteria - Paths** panel, click **Add Path** to open the **Import Path Applicability Rules for Package** dialog box, and select a local CSV file which contains file paths.

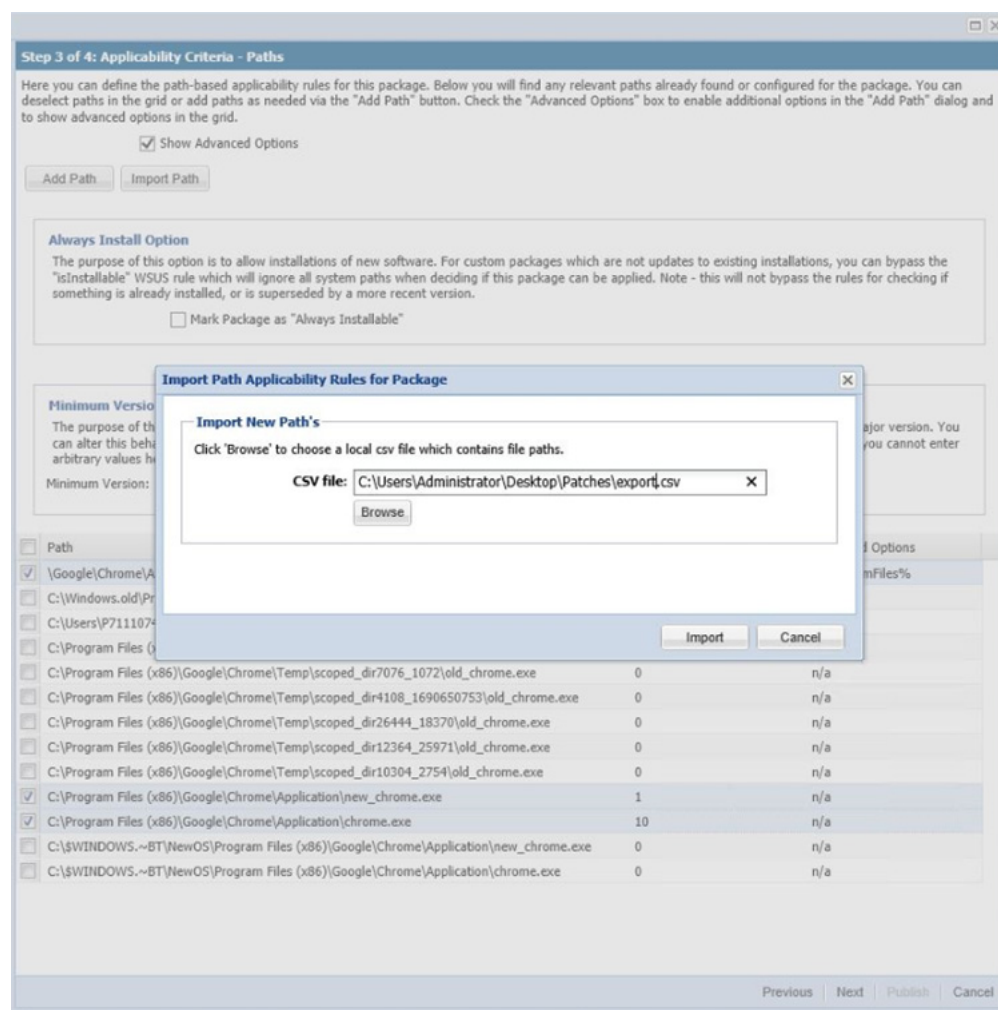

Figure 6: Import Path Applicability Rules for Package Dialog Box

This enables you to target specific file paths or to include file paths discovered in other partitions in order to create a single patch for deployment that covers all desired file paths.

CSV File Format

When creating a CSV file for import, file paths entered in the following formats are acceptable:

C:\Users\Administrator\AppData\Local\Temp\Acme\acinstall\tools\acmeinstall\tools\7z.exe
C:\Program Files\Acme\tools\7z.exe
%ProgramFiles%\Acme\tools\7z.exe

Note • The CSV file does not need to have comma-separated values, but just a list. You don't have to use quotes when there are spaces in a file path. The CSV file can essentially be a text list with just one column. As a single column list of values, simply provide one file path per line (no header row or additional columns should be included).

Resolved Issues

The following table lists the customer issues that were resolved in Software Vulnerability Manager (Cloud Edition):

Issue	Description
IOJ-2096746	VPM packages consuming disk space.
IOJ-2094792	SMS feature doesn't work in smart group notification.
IOJ-2083143	Sorting by criticality column was not working in VPM Grid.
IOJ-2083144	Sorting by CVSS and CVSS2 columns was not working in product smart groups.
IOJ-2083662	Numbers next to KB of Windows products does not add up.
IOJ-2087062	Subscription status incorrect when filtering via smart group.
