## Introduction

Flexera's Software Vulnerability Manager (formerly called Software Vulnerability Manager 2019) is a vulnerability and patch management software solution that facilitates a customized patch management process. It combines vulnerability intelligence, vulnerability scanning, and patch creation with patch deployment tool Integration to enable targeted, reliable, and cost-efficient patch management.

Vulnerability and patch management are critical components of any security infrastructure because they enable proactive detection and remediation of vulnerabilities before they are actively exploited and your security compromised. With Software Vulnerability Manager, IT operations and security teams are empowered to prevent vulnerability threats from both Microsoft and non-Microsoft (third-party) product vulnerabilities, covering Microsoft Windows, macOS, and Red Hat Enterprise Linux.

Software Vulnerability Manager integrates seamlessly with Microsoft® WSUS and System Center Configuration Manager.

## **New Features and Enhancements**

Software Vulnerability Manager (Cloud Edition) includes the following new features and enhancements:

- New Host/Product Smart Group Filters
- New SPS and VPM Product View
- New Missing MS KB Column Available in the Installation Details View
- Save Silent Parameters for Vendor Patch Subscription
- Enforced Special Characters for the Password
- Binary Versions

Ē

**Note** • To see the following new features and enhancements in your Software Vulnerability Manager (Cloud Edition) interface, you must refresh your browser's cache (press Ctrl+F5).

#### New Host/Product Smart Group Filters

With this update, there are more filters available to provide more flexibility in creating focused smart groups.

Under the Host Smart Groups, there are two new filters **Host** and **Site**. Similarly, for the Product Smart Groups, there are four new filters, **Product**, **Host**, **Site**, and **Vendor**. These filters support options like **contains**, **starts with**, and **equals**.

# New Missing MS KB Column Available in the Installation Details View

Previously for the Installation details grid, missing Microsoft KB data when available overwrote the version column data. With this update, missing KB will be shown in its own separate Missing MS KB column.

### **Enforced Special Characters for the Password**

With this update, passwords will require at least one special character. This will apply to new user setup, password reset, and forgot passwords.

Policy Rules	
Configure the Software Vulnerability Manager password policy for your users.	
Password must be at least 8 characters long.	
Users must be prevented from reusing the password for at least 5 changes.	
Password must contain at least 1 digits.	
Password must contain at least one lower case, one upper case and at least one special chara	acter.
Password must be changed at least every 180 days.	
	Save

### **Binary Versions**

Important • For the current release, binary versions has not changed.

The following are the version of the binaries provided:

Binaries (ActiveX/Agent/Daemon) version: 7.6.0.13

Software Vulnerability Manager Client Toolkit: 3.0.241 (download SVM Client Toolkit).

# **Resolved Issues**

The following table lists the customer issues that were resolved in Software Vulnerability Manager (Cloud Edition):

Issue	Description
IOJ-2119356	Fixed difference in results SPS vs VPM based on architecture.

# **Community Blogs**

Please subscribe to latest news on Software Vulnerability Manager by going to https://community.flexera.com/t5/Software-Vulnerability/bg-p/SoftwareVulnerabilityManagementblog and clicking on subscribe.

## **Product Feedback**

Have a suggestion for how we can improve this product? Please share your feedback with the product team by visiting the Software Vulnerability Manager Forum in the Flexera Community:
