Introduction

Flexera's Software Vulnerability Manager is a software vulnerability and patch management solution that facilitates a customized patch management process. It combines vulnerability and threat intelligence, end point assessment, and patch creation and publishing enable an informed and rapid patch management.

Software Vulnerability Manager can assess software vulnerabilities for both Microsoft and non-Microsoft (third-party) product vulnerabilities covering Microsoft Windows, macOS, and Red Hat Enterprise Linux. The results of this assessment are connected to our vulnerability and threat intelligence to allow for effective prioritization. Finally, third party patches may be created and published to remediate endpoints using Microsoft® WSUS (often in conjunction with System Center Configuration Manager), via Microsoft® Intune or VMware® Workspace One.

New Features and Enhancements

Software Vulnerability Manager (Cloud Edition) includes the following new features and enhancements:

- [Detect Log4j Vulnerable Files](#)
- [Binary Versions](#)

Note • To see the following new features and enhancements in your Software Vulnerability Manager (Cloud Edition) interface, you must refresh your browser's cache (press Ctrl+F5).

Detect Log4j Vulnerable Files

With this release, SVM adds enhancement to the host agent and the scanning logic to detect log4j files.

The **SVM Host Agent (v7.6.0.19)** now can detect the log4j jar files installed on a host machine. SVM will identify the version of the detected log4j file and categorize it as Secure, Insecure and EOL, to make you aware of vulnerable log4j versions in your environment.

For more information, see [SVM December Update](#) release blog in our community.

Binary Versions

The following version of the binaries provided are:

- SVM ActiveX Plug-in v7.6.0.19
- Single Host Agent v7.6.0.19
- SVM Daemon v7.6.0.19
- SVM System Center Plugin v7.6.0.19
- SVM Patch Publisher v6.1.617 (to download, [click here](#)) (no change)
- SVM Cloud Client Toolkit v5.0.561 (to download, [click here](#)) (no change)

This toolkit contains offline utilities such as the Multi-partition Reporting Tool, WSUS Management Tool and Client Data Tool which add value to SVM. This toolkit does not consist of Patch Daemon. This toolkit is for SVM Cloud edition only.

Patch Daemon will be deprecated in the future; therefore, you are encouraged to migrate to the new SVM Patch Publisher tool.

- SVM On-Prem Client Toolkit v5.0.547 (to download, [click here](#)) (no change)

This toolkit contains Patch Daemon and offline utilities such as the Multi-partition Reporting Tool, WSUS Management Tool and Client Data Tool which add value to SVM.

Known Issues

This release of Software Vulnerability Manager (Cloud Edition) does not include any known issues.

Resolved Issues

The following table lists the customer issues that were resolved in Software Vulnerability Manager (Cloud Edition):

Issue	Description
IOJ-2234824	Smart Group drop down not showing selected value for a popup.
