Introduction

Flexera's Software Vulnerability Manager is a software vulnerability and patch management solution that facilitates a customized patch management process. It combines vulnerability and threat intelligence, end point assessment, and patch creation and publishing enable an informed and rapid patch management.

Software Vulnerability Manager can assess software vulnerabilities for both Microsoft and non-Microsoft (third-party) product vulnerabilities covering Microsoft Windows, macOS, and Red Hat Enterprise Linux. The results of this assessment are connected to our vulnerability and threat intelligence to allow for effective prioritization. Finally, third party patches may be created and published to remediate endpoints using Microsoft® WSUS (often in conjunction with System Center Configuration Manager), via Microsoft® Intune or VMware® Workspace One.

New Features and Enhancements

Software Vulnerability Manager (Cloud Edition) includes the following new features and enhancements:

- [Assignment Group Support for Intune in SVM Patch Configuration](#)
- [New Software Vulnerability Manager Client Data Tool](#)

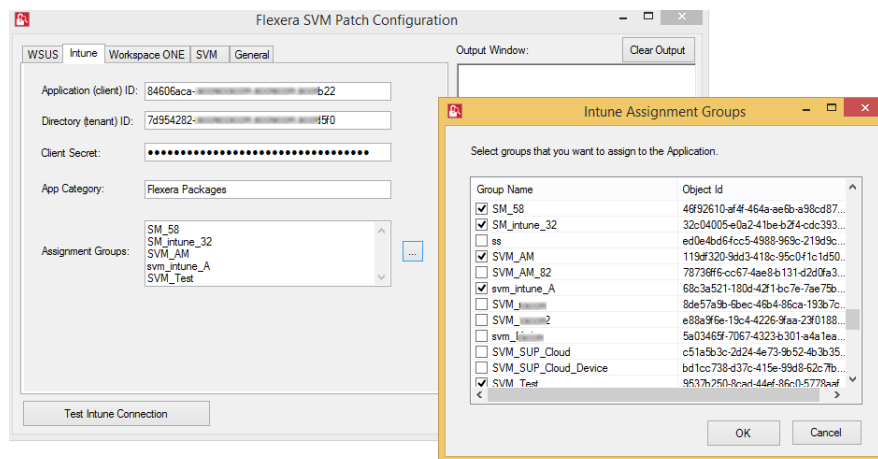

- [Single Sign-On Enhancement](#)
- [Binary Versions](#)

Note • To see the following new features and enhancements in your Software Vulnerability Manager (Cloud Edition) interface, you must refresh your browser's cache (press Ctrl+F5).

Assignment Group Support for Intune in SVM Patch Configuration

With this release, for Intune publishing, you can now choose a group or multiple groups and make assignments for end point deployments in the SVM Patch Configuration (Patch Daemon).

For more information, see [Assignment Groups](#).

New Software Vulnerability Manager Client Data Tool

A new tool - SVM Client Data is added to the SVM Client Toolkit. Upon installing the new version of SVM Client Toolkit, a shortcut for SVM Client Data will be created on the desktop. This will allow you to store your SVM data in a Microsoft SQL database to keep for as long as you wish.

Alongside the SVM Client Data Tool, PowerBI templates have been included. These templates provide a starting point for customizing data trend reports. PowerBI is a part of Microsoft's power platform. To customize the included template, download Power BI Desktop (<https://powerbi.microsoft.com/en-us/downloads/>).

Single Sign-On Enhancement

Software Vulnerability Manager Cloud Edition can now initiate Azure Single Sign-On from SVM login page (via Service Provider) for authentication. You can click on **Use single sign-on** on the SVM login page and then provide your email address to automatically redirect to the configured Identity Provider and initiate login process.

A screenshot of a login interface on a blue background. The word "Login" is at the top left. Below it are two input fields: "Username" and "Password". To the right of the "Password" field is a yellow "Login" button. Below the "Username" field are two links: "Forgot your password?" and "Use single sign-on".

For more information, see [Logging on to Software Vulnerability Manager Cloud Edition Using Single Sign-On](#).

Binary Versions

The following version of the binaries provided are:

- SVM ActiveX Plug-in v7.6.0.15 (no change)
- Single Host Agent v7.6.0.15 (no change)
- SVM Daemon v7.6.0.15 (no change)
- SVM Client Toolkit Installer v5.0.414 (download [SVM Client Toolkit](#)).

Known Issues

The following table lists the known issues in Software Vulnerability Manager (Cloud Edition):

Issue	Description
IOJ-2177891	<p>Applications that are installed to a location other than their default location may not appear.</p> <p>Java is often included with other applications. When vulnerable, the application that installed Java should be patched. Deploying a Java patch will only update/install Java to its standard location and will not patch the instance shipped with a third-party product.</p> <p>To avoid confusion and improper patching attempts, SVM intentionally scans for Java only in standard locations. If you would like to ensure known instances appear in scan results, you may choose to add a custom product in Custom Scan Rules.</p>  <hr/> <p>To add a custom product in Custom Scan Rules:</p> <ol style="list-style-type: none">1. Choose Custom Scan Rules from the Filter Scan Results node under the Scanning menu.2. Click New Custom Scan Rule.3. Enter the name and browse to the file that you wish to have appear in scan results.

Resolved Issues

The following table lists the customer issues that were resolved in Software Vulnerability Manager (Cloud Edition):

Issue	Description
IOJ-2191902	Adobe Digital Editions 4.x showing wrong advisory mapping and criticality status at VPM view.
IOJ-2190077	SVM agent deployment via Intune shows Failed status in Endpoint.
IOJ-2193579	Service Provider initiated Azure Single Sign-On.
IOJ-2184148	Mark End Of Life for products without version rule. For more information, see article .
IOJ-2206211	Mark Adobe Fireworks CS6 status as End Of Life.
