Introduction

Flexera’s Software Vulnerability Manager (formerly called Software Vulnerability Manager 2019) is a vulnerability and patch management software solution that facilitates a customized patch management process. It combines vulnerability intelligence, vulnerability scanning, and patch creation with patch deployment tool integration to enable targeted, reliable, and cost-efficient patch management.

Vulnerability and patch management are critical components of any security infrastructure because they enable proactive detection and remediation of vulnerabilities before they are actively exploited and your security compromised. With Software Vulnerability Manager, IT operations and security teams are empowered to prevent vulnerability threats from both Microsoft and non-Microsoft (third-party) product vulnerabilities, covering Microsoft Windows, macOS, and Red Hat Enterprise Linux.

Software Vulnerability Manager integrates seamlessly with Microsoft® WSUS and System Center Configuration Manager.
New Features and Enhancements

Software Vulnerability Manager (Cloud Edition) includes the following new features and enhancements:

- Publish Patches to VMware Workspace ONE
- SPS/ VPM QuickPatch
- Activity Log for Failed Login Attempts
- Binary Versions

Note • To see the following new features and enhancements in your Software Vulnerability Manager (Cloud Edition) interface, you must refresh your browser’s cache (press Ctrl+F5).

Publish Patches to VMware Workspace ONE

Software Vulnerability Manager can now publish SPS and VPM patches to VMware Workspace ONE.

This new capability requires a new version of patch daemon, released as a part of SVM Toolkit that can be downloaded at SVMClientToolkitInstall.msi

To publish patches to Workspace ONE, it will be necessary to configure patch daemon with valid Workspace ONE connection details.

Once the connection to Workspace ONE is configured, you can use either Patch Automation or Create Update Package wizard (ActiveX) to publish SPS and VPM patches to Workspace ONE.
SPS/ VPM QuickPatch

This update of Software Vulnerability Manager introduces QuickPatch. This is a new and quick way for non-IE browsers to publish patches from SVM to an end-point management system with no dependency on ActiveX. QuickPatch publishes patches to end-point management system via Patch Daemon using defaults (no customizations).

Activity Log for Failed Login Attempts

All the failed login attempts will now be logged in the Activity Log.

Binary Versions

The following are the version of the binaries provided:

Binaries (ActiveX/Agent/Daemon) version: 7.6.0.15

Version Updated:

Software Vulnerability Manager Client Toolkit: 5.0.XXX (download SVM Client Toolkit).
Resolved Issues

The following table lists the customer issues that were resolved in Software Vulnerability Manager (Cloud Edition):

<table>
<thead>
<tr>
<th>Issue</th>
