## Introduction

Flexera's Software Vulnerability Manager is a software vulnerability and patch management solution that facilitates a customized patch management process. It combines vulnerability and threat intelligence, end point assessment, and patch creation and publishing enable an informed and rapid patch management.

Software Vulnerability Manager can assess software vulnerabilities for both Microsoft and non-Microsoft (third-party) product vulnerabilities covering Microsoft Windows, macOS, and Red Hat Enterprise Linux. The results of this assessment are connected to our vulnerability and threat intelligence to allow for effective prioritization. Finally, third party patches may be created and published to remediate endpoints using Microsoft® WSUS (often in conjunction with System Center Configuration Manager), via Microsoft® Intune or VMware® Workspace One.

## New Features and Enhancements

Software Vulnerability Manager (Cloud Edition) includes the following new features and enhancements:

- [The “Patch Publisher Connections” View Added in Patching Menu](#)
- [Enhanced Status Column in the Software Suggestions page](#)
- [Binary Versions](#)

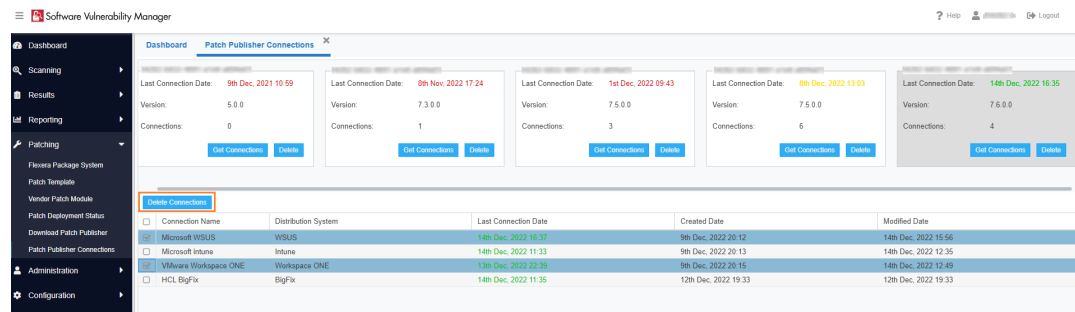

**Note** • To see the following new features and enhancements in your Software Vulnerability Manager (Cloud Edition) interface, you must refresh your browser's cache (press Ctrl+F5).

# The “Patch Publisher Connections” View Added in Patching Menu

With this release, you can now view and delete all Patch Publisher and related connections in the new tab under **Patching > Patch Publisher Connections**. You can also delete independent connections of the selected Patch Publisher.

This feature is available only in SVM New User Interface.

For more information, see [Patch Publisher Connections](#).

# Enhanced Status Column in the Software Suggestions page

With this update, the **Status** column now displays the current status of your software suggestion requests.

For more information, see [Software Suggestions](#).

# Binary Versions

The following version of the binaries provided are:

- SVM ActiveX Plug-in v7.6.0.22 (no change)
- Single Host Agent v7.6.0.22 (no change)
- SVM Daemon v7.6.0.22 (no change)
- SVM System Center Plugin v7.6.0.22 (no change)
- SVM Patch Publisher v7.6.843 (to download, [click here](#))

Refer “Resolved Issues” for changelog.

- SVM Cloud Client Toolkit v5.0.561 (to download, [click here](#)) (no change)

This toolkit contains offline utilities such as the Multi-partition Reporting Tool, WSUS Management Tool and Client Data Tool which add value to SVM. This toolkit does not consist of Patch Daemon. This toolkit is for SVM Cloud edition only.

**Note** • The [Flexera SVM Patch Configuration](#) will be deprecated in the future; therefore, you are encouraged to migrate to the new SVM Patch Publisher tool.

## Resolved Issues

The following table lists the customer issues that were resolved in Software Vulnerability Manager (Cloud Edition):

Issue	Description
<b>IOK-930774</b>	Missing download URL in SPS wizard of Patch Publisher for ungrouped view.
<b>IOK-961456</b>	Packages having large number of paths are not publishing. Updated database data model to hold large data.
<b>IOK-929847</b>	Cleaning up csi_scan_kb table while deleting the hosts.
