Introduction

Flexera's Software Vulnerability Manager is a software vulnerability and patch management solution that facilitates a customized patch management process. It combines vulnerability and threat intelligence, end point assessment, and patch creation and publishing enable informed and rapid patch management.

Software Vulnerability Manager can assess software vulnerabilities for both Microsoft and non-Microsoft (third-party) product vulnerabilities covering Microsoft Windows, macOS, and Red Hat Enterprise Linux. The results of this assessment are connected to our vulnerability and threat intelligence to allow for effective prioritization. Finally, third party patches may be created and published to remediate endpoints using Microsoft® WSUS (often in conjunction with System Center Configuration Manager), via Microsoft® Intune, VMware® Workspace One, BigFix, or Tanium.

SVM Patch Publisher inherits its current functionalities from the Patch Daemon. SVM Patch Publisher enables you to configure connections to the SVM server and to the supported end point management systems. The tool polls SVM on a configured frequency to look for new patches resulting either from a manual publishing or Patch Automation to publish patches to the specified end point management system.

New Features and Enhancements

- [Multi-Setup Package Support in Vendor Patch Module \(VPM\)](#)
- [Reference: Latest Binary Versions](#)

Multi-Setup Package Support in Vendor Patch Module (VPM)

The Vendor Patch Module (VPM) now supports publishing and deploying multiple setup files within a single package to the Intune portal, simplifying multi-setup application delivery. This enhancement resolves deployment readiness issues, enables successful installations, and extends support across **SVM** and **Patch Publisher**. These setup files are now visible in the **Patch Information** dialog box, giving improved visibility and control over deployments.

Reference: Latest Binary Versions

The following is a list of the latest binary versions available in this release:

- SVM ActiveX Plug-in v7.6.0.29 (No change)
- Single Host Agent v7.6.0.29 (No change)
- SVM Daemon v7.6.0.29 (No change)
- SVM System Center Plugin v7.6.0.29 (No change)
- SVM Patch Publisher v7.28.2019 (To download this installer, [click here](#))

Refer “Enhancements” for changelog.

- SVM Cloud Client Toolkit v5.0.1926 (To download this installer, [click here](#))

This toolkit contains offline utilities such as the Multi-partition Reporting Tool, WSUS Management Tool (also available in SVM Patch Publisher), and Client Data Tool which add value to SVM. This toolkit does not include the Patch Daemon. This toolkit is for SVM Cloud edition only.

Note • On September 23, 2024, digital signing updates were released for SVM Patch Publisher (version 7.22.1546) and SVM Cloud Client Toolkit (version 5.0.1546).

Note • [Flexera SVM Patch Configuration](#) will be deprecated in the future; therefore, you are encouraged to migrate to the new SVM Patch Publisher tool.
