

FlexNet Manager Suite

Schema Reference

Legal Information

Document Name: FlexNet Manager Suite 2018 R2 Schema Reference (for on-premises and cloud implementations)

Part Number: FMS-13.1.0-DR02

Product Release Date: September 30, 2018

Copyright Notice

Copyright © 2018 Flexera. All Rights Reserved.

This publication contains proprietary and confidential technology, information and creative works owned by Flexera and its licensors, if any. Any use, copying, publication, distribution, display, modification, or transmission of such publication in whole or in part in any form or by any means without the prior express written permission of Flexera is strictly prohibited. Except where expressly provided by Flexera in writing, possession of this publication shall not be construed to confer any license or rights under any Flexera intellectual property rights, whether by estoppel, implication, or otherwise.

All copies of the technology and related information, if allowed by Flexera, must display this notice of copyright and ownership in full.

FlexNet Manager Suite incorporates software developed by others and redistributed according to license agreements. Copyright notices and licenses for this externally-developed software are provided in the link below.

Intellectual Property

For a list of trademarks and patents that are owned by Flexera, see http://www.flexera.com/intellectual-property. All other brand and product names mentioned in Flexera products, product documentation, and marketing materials are the trademarks and registered trademarks of their respective owners.

Restricted Rights Legend

The Software is commercial computer software. If the user or licensee of the Software is an agency, department, or other entity of the United States Government, the use, duplication, reproduction, release, modification, disclosure, or transfer of the Software, or any related documentation of any kind, including technical data and manuals, is restricted by a license agreement or by the terms of this Agreement in accordance with Federal Acquisition Regulation 12.212 for civilian purposes and Defense Federal Acquisition Regulation Supplement 227.7202 for military purposes. The Software was developed fully at private expense. All other use is prohibited.

Overview

The data underlying FlexNet Manager Suite is arranged in a number of distinct databases. Most frequently these databases live within a single database server, although in very large scale implementations, it is possible to implement them across multiple servers.

The most fundamental distinction is between:

- Data imported from various instances of the FlexNet inventory agent as software and hardware inventory from individual computers within the enterprise (see Inventory Database Schema)
- Data used to calculate license positions, combining the software applications recognized from the imported inventory, the license entitlements collated from purchase records and other sources, structural information about the enterprise itself, and so on (see Compliance Database Schema).

A small set of tables is common to both these databases. These shared tables are documented within each of the above chapters.

In support of this basic structure, there are also the following major aspects:

- Staging tables used to rationalize data being imported into the main compliance database by ComplianceReader.exe (see Compliance Reader Database Schema)
- A separate schema for presenting summarized license information on a once-separate web portal (see License Portal Database Schema).

Each of the chapters covering these schemata has a common structure:

- The chapter header includes a list of different *aspects* of the data described in the chapter. (These aspects are also the lowest level included in the summary table of contents for the entire volume.)
- The chapter header is followed by a reminder of the information structure in each of the database table descriptions.
- Each aspect then has a section header page listing all the individual database tables contained within that aspect.
- Finally, the detailed topics, one for each database table, listing all the properties (columns) in the table and various attributes of each one.

This structure makes it easy to drill down from a high-level understanding of the data structure to an individual table. Conversely, if you know a table name, use the PDF search mechanism in your reader software to locate its description. Similarly, you can also search for individual properties within tables, even when you don't know their provenance.

One final chapter takes a slightly different approach. Rather than documenting an internal schema, it covers the schema used for spreadsheets importing inventory information, and the mapping of those columns to the relevant database tables and column.

This document is not an exhaustive description of the entire database structure. For example, the system makes widespread use of views extracted from these underlying tables for (amongst other reasons) performance

improvements. These views are not documented here. Nor are the mechanisms used in a multi-tenant implementation for partitioning each tenant's data made explicit in this document. However, this is a complete description of all the basic data tables from which all else is derived.

Furthermore, the descriptions of each database table are compiled automatically using the same mechanism that generates the database schemata themselves. This process guarantees complete coverage of all tables at each release.

1

Logical Data Models

In a database schema of this size, it can be hard to get your bearings. To help you understand the territory, this topic contains some logical data models, generally centered around key database objects.

Note: These illustrations are not detailed schema diagrams (such as you could generate using Microsoft SQL Server). Instead, they provide high-level "mud maps" of key objects in the FlexNet Manager Suite system, with some indications of how they relate to one another. These are logical or conceptual models. For details about how individual database tables link to each other, see the detailed descriptions in the following pages.

Overview

The first diagram gives an overview of the major components (database objects) in the system. Because the four kinds of enterprise groups shown across the bottom of the diagram have so many possible links to the other objects, no links for these are included in the overview (more links are visible in the following more specialized diagrams).

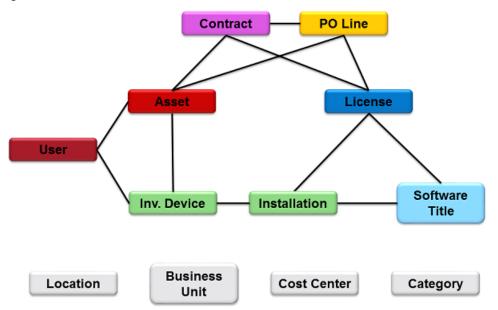

Figure 1: Overview model

The following logical models focus on one of these objects at a time, providing a few of the more important attributes or properties of those key objects in the database, and fleshing out more details of their relationships to other objects.

Asset model

In FlexNet Manager Suite, an asset is an item of hardware (including, but not limited to, computer hardware). Like a physical asset register, these records are kept separate from the inventory records that may contribute to the details about computer hardware. For this reason, you see the close link between the asset object and the inventory device object. Also notice that an asset may be linked to one of each kind of enterprise group (shown in gray across the bottom of the diagram).

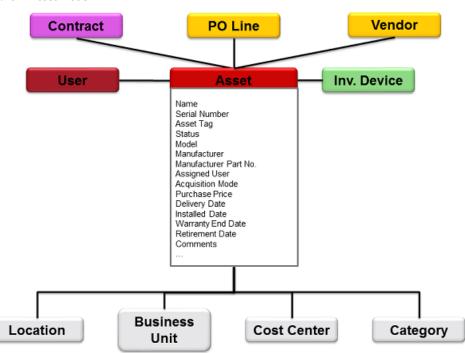

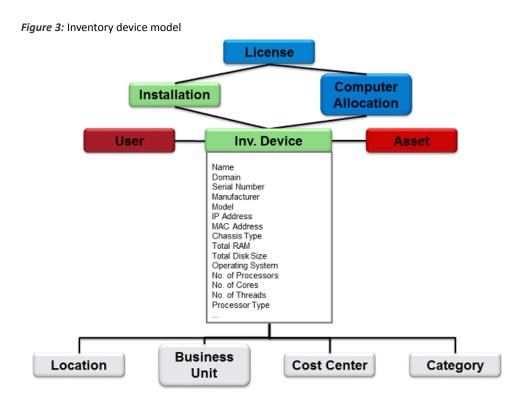

Figure 2: Asset model

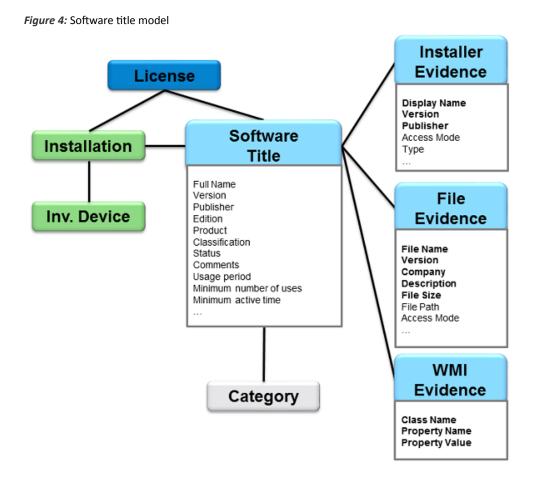

Inventory device model

Inventory devices are records of hardware objects from which hardware and (most often) software inventory has been collected. Even though inventory devices are closely related to assets, they have their own potential links to one of each kind of enterprise group. To avoid double handling, there are settings in the web interface for FlexNet Manager Suite to have the ownership of one track the other. However, it is possible to assign these records separately, so that (for example) you may link an asset to the Illinois state head office for its asset register, but have the inventory device linked to a location in the Itasca local office.

Software title model

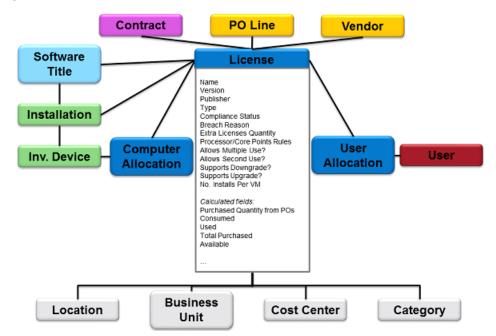

A software title database object models what is called an *application* in the web interface of FlexNet Manager Suite. *Evidence* of various types is whatever may be found on a computer that identifies the application, with the mapping between evidence and application normally supplied through the Application Recognition Library. Applications do not link directly with inventory devices: there is an intermediate installation object that provides this link. Note also that some server-based software has additional evidence types (such as access and usage evidence) that helps to track requirements for CALs.

License model

The license is perhaps the most central object in the data model, since ultimately everything else exists to allow correct calculation of incoming entitlements and consumption of those entitlements within your enterprise. Notice that individual allocations, controlled through the license properties in the web interface, are kept as separate records linking the license record either to an inventory device or a user.

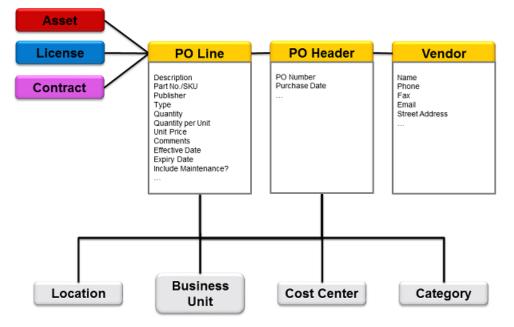

Figure 5: License model

Purchase order model

For historical reasons, the database models a purchase order as a separate header record and one or more line items from that purchase order. In the web interface for FlexNet Manager Suite, purchases are now represented as separate objects (each purchase maps to one PO line in the database), with purchase order headers represented only by a few common values appended to the top of the purchase properties. The common structure for purchases may be used for a variety of objects: software and hardware purchases, as well as renewals of maintenance contracts and the like.

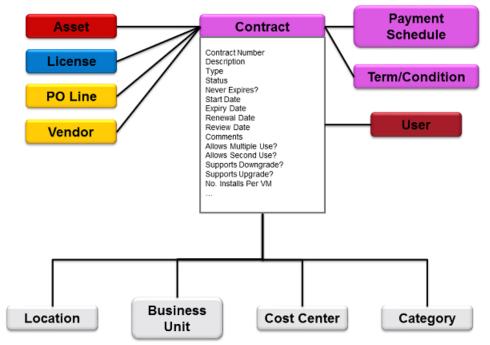

Contract model

Contracts may be used to track any kind of real-world contract, and they are particularly useful for modeling support contracts or maintenance (or in Microsoft terms, Software Assurance). These are also the mechanism for tracking regular payments. Since a contract may include many terms and conditions, these are modeled as separate objects in the database.

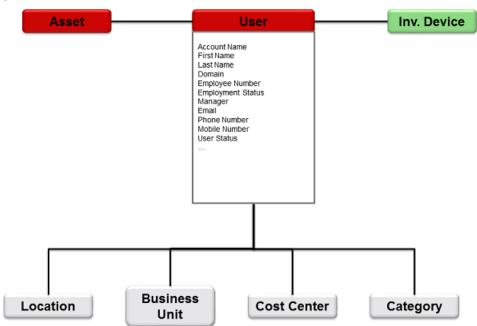

User model

A user is not a person operating the FlexNet Manager Suite system itself (these people are called operators, and are managed separately). A user is a person allowed to use an inventory device, or may be also be linked as the owner of an asset. In earlier incarnations, these were called "end users", if that helps to clarify the distinction from operators.

Figure 8: User model

2

Compliance Database Schema

This chapter describes the schema for the main database underlying FlexNet Manager Suite.

Separately documented is the schema for the inventory tables for inventory gathered by the FlexNet inventory agent, either when installed on 'adopted' devices, or when executing a remote, zero-touch inventory (see Inventory Database Schema).

Some tables from that inventory database are (correctly) duplicated in this compliance database, and these shared tables are also listed toward the end of this chapter.

Information Structure

The following information is provided about database tables. Items appear only when relevant to the database column, and are suppressed where they do not apply. Two of these items (shown bold) are columns in the following pages, and the remainder are displayed within the **Details**.

Item	Comment
Database Column	The name of the column in the SQL table.
Туре	The data type of the contents of the database column.
Size	For types that have a maximum capacity, the upper limit is provided in parentheses.
Кеу	The word "Key" appears when a column is a unique key field within the table. It is possible for several database columns to be part of the key, so that this indicator may appear for several columns in a table.
Generated ID	This indicates that a numeric ID is assigned by the database.
Nullable	If this indicator is present, the database column permits nulls.
Computed	This indicator appears for columns that are automatically computed by the database.

Item	Comment
Default	If a column has a default value declared in the schema, this is specified at the end of the first set of details for the column.
Details	Describes the data stored in the database column, including many of the indicators described above.

BatchProcessing.Common Tables

The complete set of database tables documented here includes:

- BatchProcessExecution table (see BatchProcessExecution Table)
- BatchProcessExecutionData table (see BatchProcessExecutionData Table)
- BatchProcessExecutionDataName table (see BatchProcessExecutionDataName Table)
- BatchProcessSchedule table (see BatchProcessSchedule Table)
- BatchProcessStatus table (see BatchProcessStatus Table)
- BatchProcessType table (see BatchProcessType Table)
- BatchProcessTypeLimit table (see BatchProcessTypeLimit Table)

BatchProcessExecution Table

BatchProcessExecution is a table storing the details of batch processes requested and executed.

Table 1: Database columns for BatchProcessExecution table

Database Column	Details
BatchProcessExecutionID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a batch processor.
GUID	<i>Type:</i> unique identifier. Key
0015	The GUID identifying a batch process execution.
BatchProcessTypeID	<i>Type:</i> integer. Key
	The type of this batch process execution. Foreign key to the BatchProcessType table.
Submitted	<i>Type:</i> datetime
	The date and time at which this batch process execution was submitted.

Database Column	Details
OperatorLogin	<i>Type:</i> text (max 512 characters). Nullable
	The login name of the operator requesting the batch process, NULL indicates a system request.
BeaconID	<i>Type:</i> integer. Key. Nullable
	The ID of the beacon which requested a batch process execution. Foreign key to the Beacon table.
BatchProcessorHostname	<i>Type:</i> text (max 128 characters). Key. Nullable
	The batch processor responsible for the execution of this batch process. A processor by this name may be in the BatchProcessor table, but this is not required.
BatchProcessStatusID	<i>Type:</i> integer
	Status of the batch process execution. Foreign key to the BatchProcessStatus table.
StartTime	<i>Type:</i> datetime. Nullable
	The date and time the batch process execution was started.
FinishTime	<i>Type:</i> datetime. Key. Nullable
	The date and time the batch process execution finished.
Progress	<i>Type:</i> integer
	Percentage indicator of how far through the batch process execution is.
ReturnCode	<i>Type:</i> integer. Nullable
	The return code of the batch process execution.
Output	<i>Type:</i> text. Nullable
	Contains any output reported by a batch process execution.
GroupName	<i>Type:</i> text (max 50 characters). Nullable
	The group name used to partition this batch process. Only relevant for types that require separation by group.
TenantUID	<i>Type:</i> text (max 40 characters). Nullable
	The tenant UID for this batch process. Only relevant for types that require separation by tenant.
RawMessage	<i>Type:</i> text. Nullable
	The raw, serialized message. Used for pending messages to reconstruct the queue when the batch processor restarts.

BatchProcessExecutionData Table

This table stores any extra data needed for a BatchProcessExecution record.

Table 2: Database columns for BatchProcessExecutionData table

Database Column	Details
BatchProcessExecution DataID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this table.
BatchProcessExecutionID	<i>Type:</i> integer. Key The ID of the BatchProcessExecution record this data is asociated with. Foreign key to the BatchProcessExecution table.
BatchProcessExecution DataNameID DataValue	<i>Type:</i> integer. Key An identifier for the data being stored in this row <i>Type:</i> text
	The value being stored in this row

BatchProcessExecutionDataName Table

This table holds a list of the different types of data that can be stored in BatchProcessExecutionData.

Table 3: Database columns for BatchProcessExecution	DataName table
---	----------------

Database Column	Details
BatchProcessExecution DataNameID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this table.
Name	<i>Type:</i> text (max 128 characters). Key Name of the setting.

BatchProcessSchedule Table

BatchProcessSchedule stores the schedule of a batch process.

Table 4: Database columns for BatchProcessSchedule table

Database Column	Details
BatchProcessScheduleID	Type: integer. Key. Generated ID
	A unique identifier for this table.

Database Column	Details
BatchProcessTypeID	<i>Type</i> : integer. Key The process type ID this schedule belongs to. Foreign key to the BatchProcessType table.
TenantUID	<i>Type:</i> text (max 40 characters). Key. Nullable The tenant UID for this batch schedule.
BatchProcessScheduleData	<i>Type:</i> text The Quartz scheduler data
UpdatedBy	<i>Type:</i> text (max 200 characters). Nullable The last operator to update the event.
UpdatedDate	<i>Type:</i> datetime. Nullable The date the event was last updated.
GUID	<i>Type:</i> unique identifier. Key Unique identifier for schedule.
LastRun	<i>Type:</i> datetime. Nullable The datetime this schedule was last executed.
Enabled	<i>Type:</i> boolean The datetime this schedule was last executed.

BatchProcessStatus Table

BatchProcessStatus is a static table listing status values for batch process execution.

Table 5: Database columns for BatchProcessStatus table

Database Column	Details
BatchProcessStatusID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each BatchProcessStatus. Possible values and the corresponding default strings are:
	• 1 = Submitted
	• 2 = Queued
	• 3 = Processing
	• 4 = Success
	• 5 = Error
	• 6 = Duplicate
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing an status of batch process execution. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the status resource string has no translation.

BatchProcessType Table

BatchProcessType is a static table storing the types of batch processes

Table 6: Database columns for BatchProcessType table

Database Column	Details
BatchProcessTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each BatchProcessType. Possible values and the corresponding default strings are:
	• 1 = License reconcile
	• 2 = PO line import
	• 3 = Enterprise group import
	• 4 = User assignment import
	• 5 = Inventory import
	• 6 = Active directory import
	• 7 = Entitlement recommendations recalculation
	• 8 = SAP user recommendations export
	• 9 = Business adapter import
	• 10 = Generate business adapter config
	• 15 = ServiceNow export
	• 16 = FNMEA enterprise groups export
	• 17 = IBM Passport Advantage import
	• 18 = Data Warehouse access rights update
	• 19 = Update license consumption of IBM PVU licenses
	• 20 = Data Warehouse export
	• 21 = Import SAP inventories
	• 22 = Import SAP package license
	• 23 = Inventory import and license reconcile
	• 24 = Recognition data import
	• 25 = Inventory manager compliance import
	• 26 = Compliance import readers only
	• 27 = Compliance import writers only
	• 28 = Recognition data download
	• 29 = Recognition data cleanup

• 30 = IM Data maintenance

Database Column	Details
	• 31 = SAP user and activity information import
	• 32 = Inventory import spreadsheet and license reconcile
	• 33 = FNMP Data maintenance
	• 34 = FNMP software usage history update
	• 35 = Delete activity log history
	• 36 = Baseline import processing
	• 37 = Sync FNMS tenants with Cognos
	• 38 = IM Tenant Data maintenance
	• 30 = Data Warehouse partial export
	• 31 = SAP user and activity information import
	• 32 = Inventory import spreadsheet
	• 33 = FNMP Data maintenance
	• 34 = FlexNet Manager Platform software usage history update
	• 35 = Activity log history delete
	• 36 = Baseline import processing
	• 37 = Sync FNMS tenants with Cognos
	• 38 = IM Tenant Data maintenance
	• 39 = FlexNet Manager Suite dashboard update
	• 40 = FlexNet Manager Suite Precalc update
	• 41 = Generate scoped Oracle LMS archive for logged in operator
TypeName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the batch process type.
ResourceName	<i>Type</i> : text (max 256 characters)
	The unique name of the localizable resource string representing a batch process type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters)
	The text to display if the type resource string has no translation.
StarvedAt	<i>Type</i> : integer. Nullable
	The age, in minutes, after which a task of this type will be given priority over other tasks to avoid starvation.

Database Column	Details
Timeout	<i>Type</i> : integer. Nullable The age, in minutes, after which a task of this type will be regarded as failed if its processor becomes unresponsive.
BatchProcessTypeLimitID	<i>Type:</i> integer. Nullable An optional reference to a limit that will restrict the number of items of this type that can execute at the same time.

BatchProcessTypeLimit Table

BatchProcessTypeLimit is a table storing the limits placed on the parallel execution of tasks within the Batch Processor. A limit is associated with one or more BatchProcessTypes. The limit value is the number of tasks of the associated types that may be executed at any one time.

Note that these limits are applied after the standard parallel execution restrictions are applied. This means that these limits will generally affect a single tenant system. They will take effect only if the limit is applied to types that are allowed to run in parallel for a tenant. For example, if a limit is applied to a types that run the ComplianceReader executable, the Business importer and the ARL import, it may be possible to reach the limit.

In a multi-tenant system, the limits allow the system administrator to define reasonable limits to try to ensure that the Batch scheduler does not overload the hardware it is allotted.

Table 7: Database columns for BatchProcessTypeLimit table

Database Column	Details
BatchProcessTypeLimitID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a BatchProcessTypeLimit.
Name	<i>Type:</i> text (max 128 characters). Key
	The name of this BatchProcessTypeLimit. This name will be used
	internally to reference the limit, and will be shown in the tracing output.
MaxTasks	<i>Type</i> : integer
	The number of tasks associated with this limit that may be executed in parallel by the Batch scheduler. A zero or negative value in this column will cause the limit to be ignored.

BatchProcessing Tables

The complete set of database tables documented here includes:

- BatchProcessor table (see BatchProcessor Table)
- BatchProcessorProcessType table (see BatchProcessorProcessType Table)

BatchProcessor Table

BatchProcessor is a table storing the machines responsible for executing batch processes.

Table 8: Database columns for BatchProcessor table

Database Column	Details
BatchProcessorID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a batch processor.
Hostname	<i>Type:</i> text (max 128 characters). Key The host name of this batch processor.
LastHeartbeat	<i>Type:</i> datetime. Nullable The UTC date and time this batch processor configured.
LastExecution	<i>Type:</i> datetime. Nullable The UTC date and time this batch processor last executed a batch process.

BatchProcessorProcessType Table

This table records the mapping of process types to batch processors.

Table 9: Database columns for BatchProcessorProcessType table

Database Column	Details
BatchProcessorID	<i>Type:</i> integer. Key The ID of the BatchProcessor record this data is asociated with. Foreign key to the BatchProcessor table.
BatchProcessTypeID	<i>Type:</i> integer. Key The ID of the BatchProcessType record this data is asociated with. Foreign key to the BatchProcessorType table.

Compliance.Logic.Administration Tables

The complete set of database tables documented here includes:

- APIServiceAccount table (see APIServiceAccount Table)
- ComplianceConnection table (see ComplianceConnection Table)
- ComplianceConnectionParameter table (see ComplianceConnectionParameter Table)
- ComplianceCultureType table (see ComplianceCultureType Table)

- ComplianceOperator table (see ComplianceOperator Table)
- ComplianceOperatorAudit table (see ComplianceOperatorAudit Table)
- ComplianceOperatorTenant table (see ComplianceOperatorTenant Table)
- ComplianceResourceString table (see ComplianceResourceString Table)
- ComplianceSetting table (see ComplianceSetting Table)
- ComplianceTenantSetting table (see ComplianceTenantSetting Table)
- ConfigurationFile table (see ConfigurationFile Table)
- ConfigurationFileType table (see ConfigurationFileType Table)
- ConnectionType table (see ConnectionType Table)
- Currency table (see Currency Table)
- MasterConfigurationFile table (see MasterConfigurationFile Table)
- OperatorTenantSetting table (see OperatorTenantSetting Table)
- ResourceStringCultureType table (see ResourceStringCultureType Table)
- RightDefinition table (see RightDefinition Table)
- SettingName table (see SettingName Table)
- TimezoneType table (see TimezoneType Table)

APIServiceAccount Table

Stores a collection of external API service accounts.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 10: Database columns for APIServiceAccount table

Database Column	Details
APIServiceAccountID	<i>Type:</i> integer. Key. Generated ID Unique identifier for a API service account.
ComplianceOperatorID	<i>Type:</i> integer. Key. Nullable Reference to a compliance operator.
AccessThreshold	<i>Type:</i> integer. Nullable API access alert threshold

Database Column	Details
AccessCount	<i>Type:</i> integer
	API access count.
LastSync	<i>Type:</i> datetime. Nullable
	Indicates the last datetime this account is synced with FNOOD or validateToken API is called.
Description	<i>Type:</i> text (max 256 characters). Nullable
	Description for this service account.
CreationUser	<i>Type:</i> text (max 256 characters). Nullable
	Created by.
CreationDate	<i>Type:</i> datetime. Nullable
	Creation date.
UpdatedUser	<i>Type:</i> text (max 256 characters). Nullable
	Operator who made the latest change to the currency record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	Updated date

ComplianceConnection Table

The ComplianceConnection table stores details about databases configured for use in compliance imports, such as Microsoft SMS.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 11: Database columns for ComplianceConnection table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a compliance connection.
ConnectionTypeID	<i>Type:</i> integer. Key The compliance connection type. Foreign key to the ConnectionType table.
ConnectionName	<i>Type:</i> text (max 128 characters). Key The internal, unique name of the connection.

Database Column	Details
ConnectionNameDisplayName	<i>Type:</i> text (max 64 characters)
	The name of the connection for display purposes.
UseFnmpDbServerAsSource	<i>Type:</i> boolean
	Use the FNMP database server as the source.
Server	<i>Type:</i> text (max 128 characters). Nullable
	The name of the SQL Server.
UseWindowsAuth	<i>Type:</i> boolean. Nullable
	If this field is set to True, the connection will use Windows authentication
	when connecting to the database. If False, SQL authentication will be used.
Username	<i>Type:</i> text (max 128 characters). Nullable
	The username to use when connecting with SQL authentication.
Password	<i>Type:</i> text. Nullable
	The password to use when connecting with SQL authentication.
DatabaseName	<i>Type:</i> text (max 128 characters). Nullable
	The name of the database to connect to.
ConnectionString	<i>Type:</i> text. Nullable
	The connection string used to connect to a datasource.
LastImportDate	<i>Type:</i> datetime. Nullable
	Date and time when data from this data source was successfully imported
	into the staging area (reader execution). The imported data may not have been applied to the core tables.
LastImportStarted	<i>Type:</i> datetime. Nullable
	Date and time when the import from this data source started.
LastImportEnded	<i>Type:</i> datetime. Nullable
·	Date and time when the import from this data source ended.
LastImportSuccessful	<i>Type:</i> boolean
	Whether or not the last import attempted for this datasource succeeded or
	failed.
SourceType	<i>Type:</i> text (max 256 characters)
	The source database type (one of several predefined values, such as ManageSoft or SMS).
SourceTypeDisplayName	<i>Type:</i> text (max 128 characters)
	A version of the SourceType field, that has been scoped to be specific to this connection.

Database Column	Details
Signature	<i>Type</i> : text (max 128 characters) A connection signature optionally given by the source database. This allows the source database to identify its connection.
PrimaryConnection	<i>Type:</i> boolean. Key Set this to True if this is the primary data source to import from. If computers or users exist in multiple connections, data from the primary connection is always given precedence.
TestConnection	<i>Type:</i> boolean Indicate if this connection is a test connection. If this is set to True writer will not populate target FNMP tables with data in the imported tables from this connection. If this is set to False writer will populate data from this connection as is. Compliance Reader Editor UI sets connection as test so that test data would not accidentally be written to target FNMP tables.
Enabled	<i>Type:</i> boolean Indicate if this connection is enabled. If this is set to False reader will not import data from this connection.
GroupName	<i>Type:</i> text (max 256 characters). Nullable The GroupName represents subgroups of data from the source. For example, for a citrix connection, this stores a farm name. If this is Null, then there is no sub-grouping (import all).
ExpiryPeriod	<i>Type</i> : integer. Nullable The number of days before considering records in ImportedComputer to be out of date and should be considered stale. NULL means use the Compliance Setting value StaleInventoryThreshold. 0 means always include device data regardless of age.
PerformStaleInventory Check	<i>Type:</i> boolean Indicates if this connection needs to have the inventory checked to see if data is considered stale. It is reset to 1 after completing the reader's step of an import.
IsRemote	<i>Type</i> : boolean Is this a remote connection, where the source side of the readers are running on a remote location (an Inventory Beacon)?
ConnectionExID	<i>Type</i> : unique identifier. Key The externally unique identifier for this connection, that can be used by both an Inventory Beacon and the server to track a connection.
BeaconUID	<i>Type</i> : unique identifier. Key. Nullable The unique ID of the beacon where this connection is running.

ComplianceConnectionParameter Table

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 12: Database columns for ComplianceConnectionParameter table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key
	A unique identifier for a compliance connection.
Name	<i>Type:</i> text (max 256 characters). Key
	The name of the compliance connection parameter
Value	<i>Type:</i> text
	The value of the compliance connection parameter
Туре	<i>Type:</i> text (max 64 characters)
	The type of compliance connection parameter

ComplianceCultureType Table

The ComplianceCultureType table holds all the different languages that FlexNet Manager Suite supports.

Table 13: Database columns for ComplianceCultureType table

Database Column	Details
CultureType	<i>Type:</i> text (max 12 characters). Key A unique identifier for a culture type.
DefaultCulture	<i>Type:</i> boolean Indicates whether this language is a default language on the system.
Installed	<i>Type:</i> boolean Indicates whether string for this language are installed.
DisplayName	<i>Type:</i> text (max 80 characters) The display name for this culture.

ComplianceOperator Table

ComplianceOperator stores the list of people (operators) authorized to use FlexNet Manager Suite. Operators need not be end-users of the enterprise.

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the operator.
OperatorLogin	<i>Type:</i> text (max 256 characters). Key
	The login (account name) of the operator. Usually of the form [domain\ account].
OperatorName	<i>Type:</i> text (max 512 characters). Nullable
	The name of the operator.
IsEnabled	<i>Type:</i> boolean
	When False, this operator may not use FlexNet Manager Suite, even if he or she is assigned to roles granting them access.
Email	<i>Type:</i> text (max 200 characters). Nullable
	The operator's email address.
JobTitle	<i>Type:</i> text (max 128 characters). Nullable
	The job title of the end-user.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	An optional link to an end-user in the system. Foreign key to the ComplianceUser table.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
UpdatedUser	<i>Type</i> : text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.
BusinessReportingToken	<i>Type:</i> text (max 256 characters). Nullable
	A token that is issued to an operator to allow them to authenticate with the business reporting framework.

Database Column	Details
TenantID	<i>Type:</i> small integer. Nullable The default tenant that this operator works on. Note that there is no tenant- filtered view on this table.
Global0perator	<i>Type:</i> boolean Allows an operator to access all tenants.
Interactive	<i>Type:</i> boolean Non-interactive accounts are service accounts.
LastLogin	<i>Type:</i> datetime. Nullable Last login datetime.
LastLogout	<i>Type:</i> datetime. Nullable Last logout datetime.

ComplianceOperatorAudit Table

ComplianceOperatorAudit is a multi-tenant table that stores the last login and log out date and time for each operator per tenant

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceOperatorID	<i>Type</i> : integer. Key The operator of the setting. Foreign key to the ComplianceOperator table.
LastLogin	<i>Type:</i> datetime. Nullable Last login datetime.
LastLogout	<i>Type:</i> datetime. Nullable Last logout datetime.
LastActive	<i>Type:</i> datetime. Key. Nullable Last active datetime.
IsActive	<i>Type:</i> boolean. Nullable Indicates whether the operator has been active.

Database Column

Details

IsPermanent

Type: boolean

Indicates whether the operator is permanently active.

ComplianceOperatorTenant Table

ComplianceOperatorTenant stores the list of people (operators) authorized to access a tenant.

Database Column	Details
ComplianceOperatorID	<i>Type</i> : integer. Key The operatorID that the permission will be granted for.
TenantId	<i>Type:</i> small integer. Key
CreationUser	The tenantID that the operator will be granted access for. Type: text (max 128 characters). Nullable
CI PALIDIOSEI	The operator who created the record.
CreationDate	<i>Type:</i> datetime The date the record was created.
IsEnabled	<i>Type:</i> boolean When False, this operator may not use FlexNet Manager Suite, even if he or she is assigned to roles granting them access.

ComplianceResourceString Table

The ComplianceResourceString table holds all the strings that require translation.

Table 17: Database columns for ComplianceResourceString table

Database Column	Details
ResourceString	<i>Type:</i> text (max 256 characters). Key A unique identifier for a string.

ComplianceSetting Table

The ComplianceSetting table holds the settings for the configuration and business rules of the application. With the introduction of SettingName, ComplianceTenantSetting and OperatorTenantSetting tables, if

new global setting is to be added to ComplianceSetting table, the ComplianceSettingID must not overlap with those defined in SettingName table.

Table 18: Database columns for ComplianceSetting table

Database Column	Details
ComplianceSettingID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a setting.
SettingName	<i>Type:</i> text (max 128 characters). Key A primary key for the setting.
SettingValue	<i>Type</i> : text (max 512 characters) The setting that indicates specified behavior.

ComplianceTenantSetting Table

ComplianceTenantSetting is a multi-tenant table that stores configuration and business rules specific to each tenant.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 19: Database columns for ComplianceTenantSetting table

Database Column	Details
SettingNameID	<i>Type</i> : integer. Key ID of the setting name. Foreign key to the SettingName table.
SettingValue	<i>Type:</i> text (max 512 characters). Nullable Value of the setting.

ConfigurationFile Table

The ConfigurationFile table stores configuration files generated from the master configuration files used by FlexNet Manager Suite.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 20: Database columns for ConfigurationFile table

Database Column	Details
ConfigurationFileID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a configuration file.
ConfigurationFileTypeID	<i>Type</i> : integer. Key
	The configuration file type. Foreign key to the ConfigurationFileType
	table.
Name	<i>Type:</i> text (max 100 characters)
	The name of the configuration file.
Revision	<i>Type</i> : integer
	The revision of the configuration file.
XMLFile	<i>Type</i> : text
	The content of the configuration file.

ConfigurationFileType Table

ConfigurationFileType is a static table storing the types of configuration files used by FlexNet Manager Suite.

Database Column	Details
ConfigurationFileTypeID	 Type: integer. Key. Generated ID A unique identifier for each ConfigurationFileType. Possible values and the corresponding default strings are: 1 = SQL Server
	• 2 = Other (the inventory source is another type of data store, like an Excel sheet or MS Access database).
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a configuration file type. Foreign key to the ComplianceResourceString
	table.
DefaultValue	<i>Type</i> : text (max 100 characters) The text to display if the type resource string has no translation.

ConnectionType Table

ConnectionType is a static table storing the types of connection that can be used to import data into FlexNet Manager Suite.

Table 22: Database columns	ns for ConnectionType tal	ole
----------------------------	---------------------------	-----

Database Column	Details
ConnectionTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each ConnectionType. Possible values and the corresponding default strings are: • 1 = SQL Server
	 2 = Other (the inventory source is another type of data store, like an Excel sheet or MS Access database). 5 = PowerShell
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a connection type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

Currency Table

Currency stores a collection of currencies that can be used for money values.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 23: Database columns for Currency table

Database Column	Details
CurrencyID	<i>Type:</i> integer. Key. Generated ID Unique identifier for a currency.
CurrencyName	<i>Type:</i> text (max 256 characters) Name of currency.

Database Column	Details
CurrencyResourceID	<i>Type:</i> text (max 64 characters). Nullable
	The resource string containing the name of this currency to display on the user interface.
CurrencyCode	<i>Type:</i> text (max 32 characters). Key
	Code assigned to currency.
LongPrefix	<i>Type:</i> text (max 32 characters)
	Long prefix to display in front of the money value.
LongSuffix	<i>Type:</i> text (max 32 characters)
	Long suffix to display after the money value.
LongFormat	<i>Type:</i> text (max 80 characters). Nullable
	Long format of the currency. This is a calculated field.
ShortPrefix	<i>Type:</i> text (max 32 characters)
	Short prefix to display in front of the money value.
ShortSuffix	<i>Type:</i> text (max 32 characters)
	Short suffix to display after the money value.
ShortFormat	<i>Type:</i> text (max 80 characters). Nullable
	Short format of the currency. This is a calculated field.
IsActive	<i>Type:</i> boolean. Key
	Indicates whether this currency is enabled.
Comments	<i>Type:</i> text. Nullable
	Operator comments about this currency.
Countries	<i>Type:</i> text (max 2048 characters). Nullable
	A semicolon-separated list of the country codes for countries to which this currency is applicable.
ActivationDate	<i>Type:</i> datetime. Nullable
	Date currency was enabled.
RetirementDate	<i>Type:</i> datetime. Nullable
	Date that currency was retired.
UpdatedUser	<i>Type:</i> text (max 256 characters). Nullable
	Operator who made the latest change to the currency record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	Date that the currency record was changed.

MasterConfigurationFile Table

The MasterConfigurationFile table stores master configuration files used by FlexNet Manager Suite.

Table 24: Database columns for	MasterConfigurationFile table
--------------------------------	-------------------------------

Database Column	Details
MasterConfigurationFileID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a configuration file.
ConfigurationFileTypeID	<i>Type</i> : integer. Key
	The configuration file type. Foreign key to the ConfigurationFileType
	table.
Name	<i>Type</i> : text (max 100 characters)
	The name of the configuration file.
Revision	<i>Type:</i> integer
	The revision of the configuration file.
XMLFile	<i>Type:</i> text
	The content of the configuration file.

OperatorTenantSetting Table

OperatorTenantSetting is a multi-tenant table that stores configuration and preferences for each operator per tenant

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 25: Database columns for OperatorTenantSetting table

Database Column	Details
OperatorTenantSettingID	<i>Type</i> : integer. Key. Generated ID Unique identifier of an operator tenant setting, this is a primary key.
ComplianceOperatorID	<i>Type</i> : integer. Key The operator of the setting. Foreign key to the ComplianceOperator table.
SettingNameID	<i>Type:</i> integer. Key ID of the setting name. Foreign key to the SettingName table.

Database Column	Details
SettingValue	<i>Type:</i> text (max 512 characters). Nullable
	Value of the setting.

ResourceStringCultureType Table

The ResourceStringCultureType table holds all translations of all the resource strings.

Table 26: Database columns for ResourceStringCultureTy
--

Database Column	Details
ResourceString	<i>Type</i> : text (max 256 characters). Key A unique identifier for a resource string. Foreign key to the ComplianceResourceString table.
CultureType	<i>Type:</i> text (max 12 characters). Key A unique identifier for a culture type. Foreign key to the ComplianceCultureType table.
ResourceValue	<i>Type</i> : text (max 1000 characters) A translated resource string.

RightDefinition Table

RightDefinition defines additional access rights that supplement the built-in rights.

Database Column	Details
RightDefinitionID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a right definition.
ResourceName	<i>Type:</i> text (max 16 characters). Key
	Resource (such as inventory, usage tracking, and so on) that access right relates to. Foreign key to the Resource table.
ActionClassName	<i>Type:</i> text (max 16 characters). Key
	Action class (such as modify, read, and so on) of access right. Foreign key to the ActionClass table.
ParentFeature	<i>Type:</i> text (max 50 characters)
	The product feature to which this access right applies.

Database Column	Details
Title	<i>Type:</i> text (max 1000 characters)
	Default value for access right title.
TitleResourceString	<i>Type:</i> text (max 256 characters). Key. Nullable
	The unique name of the localizable resource string representing an access
	right. Foreign key to the ComplianceResourceString table.
MinAccessType	<i>Type:</i> text (max 50 characters). Nullable
	Minimum access type that allows this right. Possible values include
	NoAccess, ReadOnlyAccess, NormalAccess, AdministratorAccess and
	CustomAccess.
DisplayIndex	<i>Type:</i> integer. Nullable
	Order in which rights are displayed (smaller numbers are displayed first).
	FlexNet Manager Suite
	built-in rights have the value 100.

SettingName Table

SettingName is a static table containing ids of setting names that are referenced by ComplianceTenantSetting and OperatorTenantSetting tables.

Table 28: Database columns for SettingName table

Database Column	Details
SettingNameID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a setting name.
Name	<i>Type:</i> text (max 128 characters). Key Name of the setting.

TimezoneType Table

This table stores a collection of timezonetypes.

Table 29: Database columns for TimezoneType table

Database Column	Details
TimezoneTypeID	<i>Type:</i> integer. Key. Generated ID
	Unique identifier for a TimezoneType.

Database Column	Details
TimezoneID	<i>Type:</i> text (max 128 characters) The .NET representation of the time zone id.
ResourceName	<i>Type:</i> text (max 256 characters). Nullable The unique name of the localizable resource string representing a timezone type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 256 characters) The default display timezone name

Compliance.Logic.Assets Tables

The complete set of database tables documented here includes:

- AcquisitionMode table (see AcquisitionMode Table)
- Asset table (see Asset Table)
- AssetComplianceColumn table (see AssetComplianceColumn Table)
- AssetComplianceStatus table (see AssetComplianceStatus Table)
- AssetContract table (see AssetContract Table)
- AssetPropertyValue table (see AssetPropertyValue Table)
- AssetPurchaseOrder table (see AssetPurchaseOrder Table)
- AssetStatus table (see AssetStatus Table)
- AssetType table (see AssetType Table)
- AssetTypeProperty table (see AssetTypeProperty Table)
- AssetWarrantyType table (see AssetWarrantyType Table)
- DepreciationMethod table (see DepreciationMethod Table)
- EndOfLifeReason table (see EndOfLifeReason Table)
- LeaseEndReason table (see LeaseEndReason Table)

AcquisitionMode Table

AcquisitionMode is a static table listing all the methods by which a company may obtain an asset.

Table 30: Database columns for AcquisitionMode table

Database Column	Details
AcquisitionModeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each AcquisitionMode. Possible values and the corresponding default strings are:
	• 1 = Purchased
	• 2 = Leased
	• 3 = Rented
	• 4 = Loaned.
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an acquisition mode. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the mode resource string has no translation.

Asset Table

The Asset table contains details of all the assets being managed within FlexNet Manager Suite.

Table 31: Database columns for Asset tabl	le
---	----

Database Column	Details
AssetID	<i>Type:</i> integer. Key. Generated ID A unique identifier for an asset.
ParentAssetID	<i>Type:</i> integer. Key. Nullable The parent asset. Foreign key to another asset in this same Asset table.
ShortDescription	<i>Type:</i> text (max 256 characters) A brief description of the asset.
SerialNumber	<i>Type</i> : text (max 150 characters). Key. Nullable The serial number of the asset.

Database Column	Details
AssetTypeID	<i>Type:</i> integer. Key
	The asset type. Foreign key to the AssetType table.
AssetTag	<i>Type</i> : text (max 256 characters). Nullable
	A user-defined asset tag for a particular asset. This may be a barcode number.
AssetStatusID	<i>Type:</i> integer. Key
	The status of the asset. Defaults to Purchased. Foreign key to the
	AssetStatus table.
PurchasePrice	<i>Type</i> : currency. Nullable
	The purchase price of the asset.
PurchasePriceRateID	<i>Type</i> : integer. Nullable
	The currency rate to apply to the purchase price of the asset. Foreign key to
	the CurrencyRate table.
AcquisitionModeID	<i>Type</i> : integer. Nullable
	The method of acquisition used for the asset. Defaults to Purchased.
	Foreign key to the AcquisitionMode table.
PrimaryPurchaseOrderNo	<i>Type:</i> text (max 50 characters). Nullable
	The purchase order number which was used to purchase the asset.
PrimaryPurchaseOrderDate	<i>Type:</i> datetime. Nullable
	The date the primary purchase order was made.
VendorID	<i>Type:</i> integer. Key. Nullable
	The vendor from whom the asset was purchased. Foreign key to the Vendor
	table.
Manufacturer	<i>Type</i> : text (max 200 characters). Nullable
	The manufacturer of the asset.
ManufacturerPartNo	<i>Type:</i> text (max 100 characters). Nullable
	The manufacturer's part number for this asset.
ModelNo	<i>Type:</i> text (max 200 characters). Nullable
	The model number of the asset.
DeliveryDate	<i>Type:</i> datetime. Nullable
	The date the asset was received.

Database Column	Details
AssetWarrantyTypeID	<i>Type:</i> integer The type of warranty for the asset. Defaults to None. Foreign key to the AssetWarrantyType table.
WarrantyExpirationDate	<i>Type:</i> datetime. Nullable The date the warranty expires.
InstallationDate	<i>Type:</i> datetime. Nullable The date the asset was installed.
RetirementDate	<i>Type:</i> datetime. Nullable The date the asset was retired.
DisposalDate	<i>Type:</i> datetime. Nullable The date the asset was disposed of.
DeletionDate	<i>Type:</i> datetime. Nullable The date the asset was deleted.
InventoryDate	<i>Type:</i> datetime. Nullable The date the asset last had inventory reported.
InventoryAgent	<i>Type:</i> text (max 64 characters). Nullable The name of the person or tool that performed the last inventory.
InventoryDateManual	<i>Type:</i> datetime. Nullable The date the asset last had inventory updated (entered) manually.
InventoryAgentManual	<i>Type:</i> text (max 64 characters). Nullable The name of the person or tool that performed the last manual inventory.
RequestNo	<i>Type:</i> text (max 60 characters). Nullable The request number for the asset.
PartNo	<i>Type:</i> text (max 100 characters). Nullable The vendor's part number for this asset.
IsLeased	<i>Type:</i> boolean Flag to indicate if this asset is leased. This field is no longer in use in FlexNet Manager Suite.
LeaseNo	<i>Type:</i> text (max 60 characters). Nullable The contract number of the lease agreement for this asset.
LeaseName	<i>Type:</i> text (max 100 characters). Nullable A contract name of the lease agreement for this asset.

Database Column	Details
LeaseStartDate	<i>Type:</i> datetime. Nullable
	The start date of the lease for this asset.
LeaseEndDate	<i>Type:</i> datetime. Nullable
	The end date of the lease for this asset.
LeaseTerminationDate	<i>Type:</i> datetime. Nullable
	The date that the lease for this asset is terminated.
LeaseEndReasonID	<i>Type:</i> integer
	The reason for the end of lease for this asset.
LeasePrice	<i>Type:</i> currency. Nullable
	The purchase price of the lease for this individual asset.
LeasePriceRateID	<i>Type:</i> integer. Nullable
	The purchase price of the lease currency rate for this individual asset.
LeasePeriodicPayment	<i>Type</i> : currency. Nullable
	The price of periodic payments associated with this contract.
LeasePeriodicPayment	<i>Type:</i> integer. Nullable
RateID	The price of periodic payments currency rate associated with this contract.
LeasePeriodTypeID	<i>Type</i> : integer
	The frequency with which the lease payments are applicable.
LeaseBuyoutCost	<i>Type</i> : currency. Nullable
	The buyout cost of the lease for this asset.
LeaseBuyoutCostRateID	<i>Type</i> : integer. Nullable
	The buyout cost of the lease currency rate associated for this asset.
LeaseComments	<i>Type:</i> text. Nullable
	Comments recorded about the lease for this asset. This field is no longer in use in FlexNet Manager Suite.
AssignToUserID	<i>Type:</i> integer. Key. Nullable
	The end-user the asset has been assigned to. Foreign key to the ComplianceUser table.
Comments	<i>Type:</i> text. Nullable
	Comments entered about the asset.
ChargeBackPrice	<i>Type</i> : currency. Nullable
	Amount to be charged back for the use of this asset. No calculations based on this charge and the frequency will be provided.

Database Column	Details
ChargeBackPriceRateID	<i>Type:</i> integer. Nullable
	The currency rate to be applied to the charge back value of the asset. Foreign key to the CurrencyRate table.
ChargeBackPeriodTypeID	<i>Type:</i> integer
	The frequency with which the charge back price is charged. Defaults to None. Foreign key to the PeriodType table.
EndOfLifeRecipient	<i>Type:</i> text (max 128 characters). Nullable
	The person or organization who received the asset when it was disposed of.
EndOfLifeReasonID	<i>Type:</i> integer
	The reason the asset was disposed of. Foreign key to the EndOfLifeReason table.
ResalePrice	<i>Type:</i> currency. Nullable
	The amount the asset was sold for.
ResalePriceRateID	<i>Type:</i> integer. Nullable
	The currency rate to be applied to the resale price of the asset. Foreign key to the CurrencyRate table.
CreationUser	Type: text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type</i> : datetime
	The date the record was created.
UpdatedUser	<i>Type</i> : text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type</i> : datetime. Nullable
	The date the record was last updated.
LocationID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any enterprise location associated with this asset. Foreign key to the GroupEx table.
BusinessUnitID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any corporate unit in the enterprise associated with this asset. Foreign key to the GroupEx table.
CostCenterID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any cost center in the enterprise associated with this asset. Foreign key to the GroupEx table.

Database Column	Details
CategoryID	<i>Type:</i> text (max 128 characters). Key. Nullable Any enterprise category associated with this asset. Foreign key to the
	GroupEx table.
DepreciationCurrentValue	<i>Type</i> : currency. Nullable
	The current value of the asset, after depreciation has been applied.
DepreciationCurrent	<i>Type:</i> integer. Nullable
ValueRateID	The currency rate to be applied to the depreciation current value of the asset. Foreign key to the CurrencyRate table.
DepreciationResidualValue	<i>Type:</i> currency. Nullable
	The residual value of the asset (value when fully depreciated).
DepreciationResidual	<i>Type:</i> integer. Nullable
ValueRateID	The currency rate to be applied to the residual value of the asset. Foreign key to the CurrencyRate table.
DepreciationMethodID	<i>Type:</i> integer. Nullable
	The depreciation method (straight line or residual value). Foreign key to the DepreciationMethod table.
DepreciationPeriod	<i>Type:</i> integer
	The depreciation period (in years), for customers to use for straight line depreciation.
DepreciationRate	<i>Type:</i> decimal. Nullable
	The annual depreciation rate (as a percentage - like 50% per year), for customers to use for residual value depreciation. Stored as a value between 0 (for 0%) and 1 (for 100%).
WrittenOffValue	<i>Type</i> : currency. Nullable
	The written-off value is the value of the asset at the time of retirement/ disposal.
WrittenOffValueRateID	<i>Type:</i> integer. Nullable
	The currency rate to be applied to the written-off value of the asset. Foreign key to the CurrencyRate table.

AssetComplianceColumn Table

The AssetComplianceColumn table lists the columns (or aspects of the asset record) for which compliance changes can be tracked.

Table 32: Database columns for AssetComplianceColumn table

Database Column	Details
AssetComplianceColumnID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each AssetComplianceColumn. Possible values and the corresponding default strings are:
	• 1 = Operating System
	• 2 = Service Pack
	• 3 = Number of Processors
	• 4 = Processor Type
	• 5 = Max Clock Speed
	• 6 = Total Memory
	• 7 = Chassis Type
	• 8 = Number of Hard Drives
	• 9 = Total Disk Size
	• 10 = Number of Network Cards
	• 11 = Number of Display Adapters
	• 12 = IP Address
	• 13 = MAC Address
	• 14 = Host
	• 15 = Number of Cores
	• 16 = Number of Threads.
ColumnNameResourceName	<i>Type:</i> text (max 256 characters). Nullable
	The unique name of the localizable resource string representing a compliance-tracked column. Foreign key to the ComplianceResourceString table.
ColumnName	<i>Type:</i> text (max 128 characters). Key The text to display if the column resource string has no translation.
IsColumnNumeric	<i>Type:</i> boolean Indicates whether the column is numeric (True) or a string (False).

Database Column	Details
ComplianceAction	<i>Type:</i> integer Bitwise value to indicate what type of action to track change on.
TrackComplianceBitwise Value	<i>Type:</i> integer Bitwise value indicating which asset types compliance tracking is turned on for.

AssetComplianceStatus Table

AssetComplianceStatus is a static table listing possible asset compliance states, such as compliant, new, changed, or ignored.

Database Column	Details
AssetComplianceStatusID	<pre>Type: integer. Key. Generated ID A unique identifier for each AssetComplianceStatus. Possible values and the corresponding default strings are: • 1 = New • 2 = Compliant • 3 = Changed • 4 = Ignore.</pre>
StatusResourceName StatusDefaultValue	Type: text (max 256 characters). Key The unique name of the localizable resource string representing an asset compliance status. Foreign key to the ComplianceResourceString table. Type: text (max 100 characters) The text to display if the status resource string has no translation.

AssetContract Table

The AssetContract table links assets to related contracts.

Table 34: Database columns for AssetContract table

Database Column	Details
AssetContractID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this record.
ContractID	<i>Type:</i> integer. Key The contract linked to the asset. Foreign key to the Contract table.
AssetID	<i>Type</i> : integer. Key The asset linked to the contract. Foreign key to the Asset table.

AssetPropertyValue Table

For each asset, AssetPropertyValue stores the values for the custom properties defined in AssetTypeProperty.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 35: Database columns for AssetPropertyValue table

Database Column	Details
AssetPropertyValueID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for this record.
AssetTypePropertyID	<i>Type:</i> integer. Key
	The property whose value is being stored. The type of the asset should match the type that the property is associated with. Foreign key to the AssetTypeProperty table.
AssetID	<i>Type:</i> integer. Key
	The asset associated with the property value. Foreign key to the Asset table.
PropertyValue	<i>Type:</i> text (max 4000 characters)
	The value of the property for the specified Asset.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.

Database Column	Details
UpdatedUser	<i>Type</i> : text (max 128 characters). Nullable The operator who last updated the record.
UpdatedDate	<i>Type</i> : datetime. Nullable The date the record was last updated.

AssetPurchaseOrder Table

The AssetPurchaseOrder table links assets to related purchase order lines.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 36: Database columns for AssetPurchaseOrder table

Database Column	Details
AssetID	<i>Type:</i> integer. Key The asset linked to a purchase order. Foreign key to the Asset table.
PurchaseOrderDetailID	<i>Type:</i> integer. Key The purchase order line linked to an asset. Foreign key to the PurchaseOrderDetail table.

AssetStatus Table

AssetStatus is a static table storing a list of possible asset states, such as purchased, in storage, installed, retired, disposed and other.

Table 37: Database columns for AssetStatus table

Database Column	Details
AssetStatusID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each AssetStatus. Possible values and the corresponding default strings are:
	• 1 = Purchased
	• 2 = In Storage
	• 3 = Installed
	• 4 = Retired
	• 5 = Disposed
	• 6 = Other.
StatusResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing an asset status. Foreign key to the ComplianceResourceString table.
StatusDefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the status resource string has no translation.

AssetType Table

AssetType stores the collection of the types of assets that can be created in FlexNet Manager Suite.

Table 38: Database columns for AssetType table

Database Column	Details
AssetTypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each AssetType. Possible values and the corresponding default strings are:
	• 1 = Workstation
	• 2 = Server
	• 3 = Monitor
	• 4 = Desk
	• 5 = Chair
	• 6 = Printer
	• 7 = Router
	• 8 = Switch
	• 9 = Telephone
	• 10 = Cell phone
	• 11 = Laptop.
	• 12 = Mobile Device.
AssetTypeResourceName	<i>Type:</i> text (max 256 characters). Nullable
	The unique name of the localizable resource string representing a document type. Foreign key to the ComplianceResourceString table.
AssetTypeName	<i>Type:</i> text (max 64 characters). Key
	The text to display if the type resource string has no translation.
XMLFile	<i>Type:</i> text. Nullable
	The layout of the property dialog for this type of asset, stored in XML format.
ParentAssetTypeID	<i>Type:</i> integer. Nullable An asset type which is a parent of this asset type. Foreign key to the same
	AssetType table.
ManagedType	<i>Type:</i> boolean. Key Set this field to True if this type of asset is directly managed by FlexNet
	Manager Suite (for example, laptops, servers and workstations).
BitwiseValue	<i>Type:</i> integer
	The bitwise value of the asset type. This value is used when tracking compliance changes for assets linked to computers.

AssetTypeProperty Table

AssetTypeProperty defines extra custom properties for all assets.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
AssetTypePropertyID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a property of an asset type.
PropertyName	<i>Type:</i> text (max 256 characters). Key
	The name of the property.
AssetTypeID	<i>Type:</i> integer. Key. Nullable
	Asset type with which this property is associated. Foreign key to the
	AssetType table.
HardwareClassName	<i>Type:</i> text (max 256 characters). Nullable
	The WMI class name associated with this property. This field applies for
	hardware properties that are mapped to hardware inventory tables.
HardwarePropertyName	<i>Type:</i> text (max 256 characters)
	The WMI property name associated with this property. This field applies for
	hardware properties that are mapped to hardware inventory tables.
CustomPropertyDisplayX	<i>Type:</i> integer. Nullable
MLID	Foreign key to a record in the CustomPropertyDisplayXML table,
	describing how to show the property on a property dialog.

AssetWarrantyType Table

AssetWarrantyType is a static table listing all the types of warranties.

Table 40: Database columns for AssetWarrantyType table

Database Column	Details
AssetWarrantyTypeID	 <i>Type:</i> integer. Key. Generated ID A unique identifier for each AssetWarrantyType. Possible values and the corresponding default strings are: 1 = None 2 = One year on site
WarrantyTypeResourceName	 3 = Three years on site. <i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing an asset warranty type. Foreign key to the ComplianceResourceString table.
WarrantyTypeDefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

DepreciationMethod Table

DepreciationMethod is a static table storing the collection of available depreciation methods.

Database Column	Details
DepreciationMethodID	 Type: integer. Key. Generated ID A unique identifier for each DepreciationMethod. Possible values and the corresponding default strings are: 1 = Straight line 2 = Residual value.
ResourceName	<i>Type</i> : text (max 50 characters). Key The unique name of the localizable resource string representing a depreciation method. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the method resource string has no translation.

EndOfLifeReason Table

EndOfLifeReason is a static table storing the collection of all reasons for disposing of an asset.

Table 42: Database columns for EndOfLifeReason table	Table 42: Databa	ase columns for	r EndOfLifeReason	table
--	------------------	-----------------	-------------------	-------

Database Column	Details
EndOfLifeReasonID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each EndOfLifeReason. Possible values and the corresponding default strings are:
	 1 = [empty string]
	• 2 = Lost
	• 3 = Stolen
	• 4 = Disposed
	• 5 = Sold
	• 6 = Donated
	• 7 = Broken.
ResourceName	<i>Type:</i> text (max 50 characters). Key
	The unique name of the localizable resource string representing an end-of- life reason. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the reason resource string has no translation.

LeaseEndReason Table

LeaseEndReason is a static table listing all the reasons that a company terminates a lease.

Table 43: Database columns for LeaseEndReason table

Database Column	Details
LeaseEndReasonID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for each LeaseEndReason. Possible values and the corresponding default strings are:
	 1 = [empty string]
	• 2 = Lease Ended - Asset Returned
	• 3 = Early Termination - Asset Returned
	• 4 = Buyout
	• 5 = Early Buyout
	• 6 = Trade.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a lease-end reason. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the reason resource string has no translation.

Compliance.Logic.Beacon Tables

The complete set of database tables documented here includes:

- ActiveDirectoryComputer table (see ActiveDirectoryComputer Table)
- ActiveDirectoryDomain table (see ActiveDirectoryDomain Table)
- ActiveDirectoryGroup table (see ActiveDirectoryGroup Table)
- ActiveDirectoryMember table (see ActiveDirectoryMember Table)
- ActiveDirectoryUser table (see ActiveDirectoryUser Table)
- AdministrationAccount table (see AdministrationAccount Table)
- AppVPackageMapping table (see AppVPackageMapping Table)
- AvailablePackage table (see AvailablePackage Table)
- AvailablePackageType table (see AvailablePackageType Table)
- BaselineImport table (see BaselineImport Table)
- Beacon table (see Beacon Table)
- BeaconActivityStatus table (see BeaconActivityStatus Table)

- BeaconAdministrationAccount table (see BeaconAdministrationAccount Table)
- BeaconAgentEvent table (see BeaconAgentEvent Table)
- BeaconDiscoveryStatus table (see BeaconDiscoveryStatus Table)
- BeaconDiscoveryTaskSummaryStatus table (see BeaconDiscoveryTaskSummaryStatus Table)
- BeaconDownloadedPolicy table (see BeaconDownloadedPolicy Table)
- BeaconExecutionStatusType table (see BeaconExecutionStatusType Table)
- BeaconFilter table (see BeaconFilter Table)
- BeaconIssueStatus table (see BeaconIssueStatus Table)
- BeaconIssueStatusType table (see BeaconIssueStatusType Table)
- BeaconPolicy table (see BeaconPolicy Table)
- BeaconPolicyPropertyValue table (see BeaconPolicyPropertyValue Table)
- BeaconPropertyValue table (see BeaconPropertyValue Table)
- BeaconRule table (see BeaconRule Table)
- BeaconRuleAction table (see BeaconRuleAction Table)
- BeaconRuleActionPropertyValue table (see BeaconRuleActionPropertyValue Table)
- BeaconRuleBeaconTargetMapping table (see BeaconRuleBeaconTargetMapping Table)
- BeaconSiteSubnetMapping table (see BeaconSiteSubnetMapping Table)
- BeaconTarget table (see BeaconTarget Table)
- BeaconTargetAgentEvent table (see BeaconTargetAgentEvent Table)
- BeaconTargetDiscoveredDeviceMapping table (see BeaconTargetDiscoveredDeviceMapping Table)
- BeaconTargetPropertyValue table (see BeaconTargetPropertyValue Table)
- BeaconTargetSiteMapping table (see BeaconTargetSiteMapping Table)
- BeaconTargetSiteSubnetMapping table (see BeaconTargetSiteSubnetMapping Table)
- BeaconUpgradeMode table (see BeaconUpgradeMode Table)
- BeaconUpgradeStatus table (see BeaconUpgradeStatus Table)
- BeaconWebServerStatus table (see BeaconWebServerStatus Table)
- DiscoveredDeviceDiscoveredBy table (see DiscoveredDeviceDiscoveredBy Table)
- DiscoveredDeviceDiscoveryStatus table (see DiscoveredDeviceDiscoveryStatus Table)
- DiscoveredDeviceInventoryStatus table (see DiscoveredDeviceInventoryStatus Table)
- DiscoveredDeviceTaskDetailedError table (see DiscoveredDeviceTaskDetailedError Table)

- DiscoveredDeviceTaskStatus table (see DiscoveredDeviceTaskStatus Table)
- DiscoveredDeviceTaskStatusHistory table (see DiscoveredDeviceTaskStatusHistory Table)
- DiscoveredDeviceTaskType table (see DiscoveredDeviceTaskType Table)
- ErrorCategory table (see ErrorCategory Table)
- FNMEAAgent table (see FNMEAAgent Table)
- IncomingBaseline table (see IncomingBaseline Table)
- ReconcileSoftwareLicenseReconcileExemptionReason table (see ReconcileSoftwareLicenseReconcileExemptionReason Table)
- RuleDiscoveryActionSummary table (see RuleDiscoveryActionSummary Table)
- RuleInventoryActionSummary table (see RuleInventoryActionSummary Table)
- SoftwareLicenseReconcileExemptionReasonData table (see SoftwareLicenseReconcileExemptionReasonData Table)
- StatusCodeCategory table (see StatusCodeCategory Table)
- UIAlignmentType table (see UIAlignmentType Table)
- UIFieldType table (see UIFieldType Table)
- UIInsertType table (see UIInsertType Table)
- UIItem table (see UIItem Table)
- UIItemTargetSubType table (see UIItemTargetSubType Table)

ActiveDirectoryComputer Table

The ActiveDirectoryComputer table stores the active directory data for computers.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 44: Database columns for ActiveDirectoryComputer table

Database Column	Details
ActiveDirectoryComputerID	<i>Type:</i> integer. Key. Generated ID Auto-generated Active Directory computer ID
GUID	<i>Type:</i> unique identifier. Key The GUID of the computer.

Database Column	Details
ComputerName	<i>Type:</i> text (max 64 characters) The computer name.
ActiveDirectoryDomainID	<i>Type:</i> integer. Key Foreign key to the ActiveDirectoryDomain table
SID	<i>Type:</i> text (max 256 characters). Key. Nullable The SID of the computer.

ActiveDirectoryDomain Table

The ActiveDirectoryDomain table stores the active directory domains.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 45: Database columns for ActiveDirectoryDomain table

Database Column	Details
ActiveDirectoryDomainID	<i>Type:</i> integer. Key. Generated ID Auto-generated Active Directory Domain ID
QualifiedName	<i>Type:</i> text (max 100 characters). Key The fully qualified domain name
FlatName	<i>Type</i> : text (max 32 characters) The domain flat name

ActiveDirectoryGroup Table

The ActiveDirectoryGroup table stores the active directory data.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 46: Database columns for ActiveDirectoryGroup table

Database Column	Details
ActiveDirectoryGroupID	<i>Type:</i> integer. Key. Generated ID Auto-generated Active Directory Group ID
GUID	<i>Type:</i> unique identifier. Key The GUID of the AD group.
SID	<i>Type</i> : text (max 256 characters). Key. Nullable
Name	The SID of the AD group. <i>Type:</i> text (max 128 characters). Nullable
ActiveDirectoryDomainID	The AD group name
ACTIVEDTI ECCOLYDOMATHID	Foreign key to the ActiveDirectoryDomain table

ActiveDirectoryMember Table

The ActiveDirectoryMember table stores the active directory data for AD member objects.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 47: Database columns for ActiveDirectoryMember table

Database Column	Details
GUID	<i>Type:</i> unique identifier. Key The GUID of the member object.
ParentGroupGUID	<i>Type:</i> unique identifier. Key The parent AD group GUID.

ActiveDirectoryUser Table

The ActiveDirectoryUser table stores the active directory data for users.

Table 48: Database columns for ActiveDirectoryUser table

Database Column	Details
ActiveDirectoryUserID	<i>Type:</i> integer. Key. Generated ID Auto-generated Active Directory user ID
GUID	<i>Type:</i> unique identifier. Key The GUID of the user.
SAMAccountName	<i>Type:</i> text (max 20 characters). Key The user name.
ActiveDirectoryDomainID	<i>Type:</i> integer. Key Foreign key to the ActiveDirectoryDomain table
Sid	<i>Type:</i> text (max 256 characters). Key. Nullable The SID of the user.

AdministrationAccount Table

Records the complete set of administration accounts configured on inventory beacons.

Table 49: Database columns for AdministrationAccount table

Database Column	Details
AccountID	<i>Type:</i> integer. Key. Generated ID Unique id for the account.
AccountName	<i>Type:</i> text (max 256 characters). Key The logical name of the account.

AppVPackageMapping Table

The AppVPackageMapping table is a table that maps App-V 4.6 packages to installer evidence.

Table 50: Database columns for AppVPackageMapping table

Database Column	Details
AppVPackageMappingID	<i>Type:</i> integer. Key. Generated ID
	Auto-generated App-V 4.6 package mapping ID.
PackageName	<i>Type:</i> text (max 256 characters). Key The App-V 4.6 package name.
PackageVersion	<i>Type:</i> text (max 128 characters). Key
Fackagever ston	The App-V 4.6 package version.
DisplayName	<i>Type</i> : text (max 256 characters)
	The display name of the software as reported by the installer evidence.
Version	<i>Type</i> : text (max 72 characters)
	The version of the software as reported by the installer evidence.
Publisher	<i>Type</i> : text (max 200 characters)
	The publisher of the software as reported by the installer evidence.

AvailablePackage Table

Packages which are available to beacons.

Table 51: Database columns for Available	Package table
--	---------------

Database Column	Details
AvailablePackageID	<i>Type:</i> integer. Key. Generated ID The ID of the available package.
FullName	<i>Type:</i> text (max 256 characters). Key The full path of the package within the repository.
Version	<i>Type:</i> text (max 32 characters). Key The version of the package.
AvailablePackageTypeID	<i>Type</i> : integer. Key The type of the package. Foreign key to the AvailablePackageType table.

Database Column	Details
RelativeURLToOSD	<i>Type:</i> text (max 256 characters) The relative URL to the OSD of the package for use in inventory agent policy.
UseInAgentPolicy	<i>Type:</i> boolean Whether the package should be added to policy for inventory agents.
Build	<i>Type</i> : text (max 8 characters). Key The build number of the package, necessary for choosing between patched versions of the same release.
WebUIRelativeURL	<i>Type</i> : text (max 256 characters). Nullable The relative URL to download the package from WebUI

AvailablePackageType Table

Table 52: Database columns for AvailablePackageType table
--

Database Column	Details
AvailablePackageTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each AvailablePackageType. Possible values are:
	• 1 = Adoption
	• 2 = Upgrade
	• 3 = Inventory agent plugin
	• 4 = Software
	• 5 = Other
	• 6 = Inventory beacon upgrade
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a purchase
	order line item type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.

BaselineImport Table

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
BaselineImportID	<i>Type:</i> integer. Key. Generated ID The baseline import ID
Туре	<i>Type:</i> text (max 16 characters) The baseline type
Date	<i>Type:</i> datetime The date of the baseline import
PurchaseOrderID	<i>Type:</i> integer. Key. Nullable The purchase order for the baseline import
ComplianceOperatorID	<i>Type:</i> integer. Key The compliance operator who performed the baseline import

Table 53: Database columns for BaselineImport table

Beacon Table

The Beacon table contains beacon definition.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 54: Database columns for Beacon table

Database Column	Details
BeaconID	<i>Type:</i> integer. Key. Generated ID Unqiue ID assigned to each beacon.
BeaconUID	<i>Type:</i> unique identifier. Key Unique string ID of the beacon.
BeaconName	<i>Type:</i> text (max 64 characters) Name of the beacon.

Database Column	Details
BeaconDescription	<i>Type:</i> text (max 256 characters). Nullable
	Description of the beacon.
BeaconStatus	<i>Type:</i> boolean
	Boolean indicating to include or exclude Beacon.
LastKnownActivityTime	<i>Type:</i> datetime. Nullable
	Last known time that communication has been received from the beacon.
ActivityStatusID	<i>Type</i> : integer
	Last known activity status reported by the beacon.
PolicyDownloadedTime	<i>Type:</i> datetime. Nullable
	Policy downloaded time
CurrentPolicyRevisionNo	<i>Type:</i> integer. Nullable
	Last downloaded policy revision number
BeaconLocation	<i>Type:</i> text (max 256 characters). Nullable
	Location field for Beacon.
PrimaryParentUID	<i>Type:</i> unique identifier. Nullable
	The parent of the Beacon. For the core Beacon, the PrimaryParentUID is NULL.
BeaconPassword	<i>Type:</i> text (max 64 characters). Nullable
	The password used by the beacon to authenticate with.
HTTPAccessData	<i>Type:</i> text. Nullable
	The HTTPEndPointStatus object, used for storing a summary of how to access the sahres on this beacon.
UpgradeModeID	<i>Type:</i> integer
	The upgrade mode selected for this beacon.
UpgradeStatusID	<i>Type</i> : integer
	The latest information reported by a beacon about any upgrade activity or changes.
LastKnownPolicy	<i>Type:</i> datetime. Nullable
	The last known time that the beacon has communicated with the server.
Version	<i>Type:</i> text (max 50 characters). Nullable
	Version of installed beacon on the server
WebServerStatusID	<i>Type:</i> integer
	The last known time that the beacon has communicated with the server.

Database Column	Details
UpgradeStatusTime	<i>Type</i> : datetime. Nullable
	The time the last upgrade status was reported.
AvailablePackageID	<i>Type:</i> integer. Key. Nullable
	If the beacon upgrade mode is set to specific version, then this stored the
	specific package to upgrade to.
ParentServerURL	<i>Type:</i> text. Nullable
	The parent to which this beacon will communicate with.
DownloadURL	<i>Type:</i> text. Nullable
	The download URL of the parent.
UploadURL	<i>Type:</i> text. Nullable
	The upload URL of the parent.

BeaconActivityStatus Table

BeaconActivityStatus is a static table listing all of the states of a beacon.

Table 55: Database columns for BeaconActivityStatus table

Database Column	Details
BeaconActivityStatusID	<i>Type:</i> integer. Key. Generated ID
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing the BeaconActivityStatus record. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the state resource string has no translation.

BeaconAdministrationAccount Table

Records an administration account discovered on an inventory beacon.

Table 56: Database columns for BeaconAdministrationAccount table

Database Column	Details
AccountID	<i>Type</i> : integer. Key Unique id for the account.
ServerUID	<i>Type</i> : unique identifier. Key Identifies the distribution server which discovered the account.

BeaconAgentEvent Table

The BeaconAgentEvent table contains a list of events that can be included in agent schedules.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 57: Database columns for BeaconAgentEvent table

Database Column	Details
BeaconAgentEventID	<i>Type:</i> integer. Key. Generated ID Unqiue ID assigned to each beacon agent event.
EventName	<i>Type:</i> text (max 256 characters). Key Event name.
EventUID	<i>Type:</i> unique identifier. Key Event uid.
Value	<i>Type:</i> text An XML representation of the agent event data.

BeaconDiscoveryStatus Table

Discovery and remote execution status of Beacon

Database Column	Details
BeaconDiscoveryStatusID	<i>Type:</i> integer. Key. Generated ID
	The ID of the beacon discovery status.
ServerUID	<i>Type:</i> unique identifier. Key
	The inventory beacon that has run the task.
State	<i>Type:</i> text (max 256 characters)
	State of the discovery/execution - Running/Finished.
StartDateTime	<i>Type:</i> datetime
	Execution start time.
Duration	<i>Type:</i> integer
	Duration in Seconds of the discovery execution.
DiscoveredCount	<i>Type:</i> integer
	Total number of devices discovered.
ExecutionSuccess	<i>Type:</i> integer
	Total number successful remote executions.
ExecutionFailure	<i>Type:</i> integer
	Total number failed remote executions.

Table 58: Database columns for BeaconDiscoveryStatus table

BeaconDiscoveryTaskSummaryStatus Table

Task summary list for a particular beacon

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 59: Database columns for BeaconDiscoveryTaskSummaryStatus table

Database Column	Details
TaskSummaryStatusID	<i>Type:</i> integer. Key. Generated ID The ID of the device status.
BeaconDiscoveryStatusID	<i>Type:</i> integer. Key The beacon discovery status table which this refers to.

Database Column	Details
TaskTypeID	<i>Type</i> : integer The type of task which was run.
SuccessCount	<i>Type</i> : integer Success count in this particular execution.
FailureCount	<i>Type</i> : integer Failure count in this particular execution.

BeaconDownloadedPolicy Table

The BeaconDownloadedPolicy table contains policies downloaded by inventory beacons.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 60: Database columns for BeaconDownloadedPolicy table

Database Column	Details
BeaconDownloadedPolicyID	<i>Type:</i> integer. Key. Generated ID The ID of the downloaded beacon policy.
RevisionNumber	<i>Type:</i> integer. Key The revision number of this policy.
PolicyXML	<i>Type:</i> XML The beacon policy xml downloaded by inventory beacons.

BeaconExecutionStatusType Table

BeaconExecutionStatusType is a static table listing possible beacon status values.

Database Column	Details
BeaconExecutionStatus	<i>Type:</i> integer. Key. Generated ID
TypeID	A unique identifier for each BeaconExecutionStatusType. Possible values and the corresponding default strings are:
	• 1 = Unknown
	• 2 = Started
	• 3 = Not configured
	• 4 = Running
	• 5 = Finished
	• 6 = Stopped
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a batch process type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.

Table 61: Database columns for BeaconExecutionStatusType table

BeaconFilter Table

The BeaconFilter table contains target filters.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 62: Database columns for BeaconFilter table

Database Column	Details
BeaconFilterID	<i>Type</i> : integer. Key. Generated ID Unqiue ID automatically assigned to each beacon target filters.
BeaconTargetID	<i>Type</i> : integer. Key Target this filter refers to.
Include	<i>Type:</i> boolean Boolean string indicating to include or exclude filter value.

Database Column	Details
IsLinked	<i>Type</i> : boolean Boolean indicating if the filter is linked to site/subnet/device or an independent filter.
Value	<i>Type:</i> text (max 256 characters) Filter value.
FilterType	<i>Type</i> : text (max 64 characters) Filter type set for this filter.

BeaconIssueStatus Table

Records beacon issue detail information.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 63: Database columns for BeaconIssueStatus table

Database Column	Details
BeaconIssueStatusID	<i>Type:</i> integer. Key. Generated ID
	Unique id for the BeaconIssueStatus.
BeaconID	<i>Type:</i> integer. Key
	Beacon that this issue status relates to
BeaconIssueStatusTypeID	<i>Type:</i> integer. Key
	Issue type
IsActive	<i>Type</i> : boolean
	Policy downloaded time
IssueDetail	<i>Type:</i> text. Nullable
	Detail information about the issue

BeaconIssueStatusType Table

BeaconIssueStatusType is a static table listing possible beacon alerts.

Table 64: Database columns for BeaconIssueStatusType table

Database Column	Details
BeaconIssueStatusTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each BeaconIssueStatusType. Possible values and the corresponding default strings are: • 0 = Unknown
	• 1 = Policy load
	• 2 = Policy download
	• 3 = Discovery execution
	• 4 = Action execution
	• 5 = Self hosted web server
	• 6 = Service exit
	• 7 = Package download
	• 8 = Active Directory import
	• 9 = SAP Inventory import
	• 10 = SAP recommendation set download
	• 11 = Beacon self upgrade
	• 12 = Beacon Parent Configuration
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a batch process type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.

BeaconPolicy Table

The BeaconPolicy table contains the beacon policy.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 65: Database columns for BeaconPolicy table

Database Column	Details
BeaconPolicyID	<i>Type:</i> integer. Key. Generated ID
	The ID of the beacon policy.
RevisionNumber	<i>Type</i> : integer
	The revision number of this policy.
AgentScheduleData	<i>Type:</i> text. Nullable
	The Schedule object, used for storing the global schedule for managed devices.
CreationDate	<i>Type:</i> datetime
	Date and time when the policy was created.
LastChangedOn	<i>Type:</i> datetime. Nullable
	Date and time that the policy was last modified.
ApprovedBeaconPackageID	<i>Type:</i> integer. Key. Nullable
	The beacon upgrade package that has been approved by the customer. NULL indicates to stay always on the latest.
LastDiscoveryFull	<i>Type:</i> datetime. Nullable
ExportTime	The last time a discovery export was generated.
LastDiscoveryFull	<i>Type:</i> integer. Nullable
ExportVersion	The revision number of the last full discovery export.
LastTargetRefreshTime	<i>Type:</i> datetime. Nullable
	The last time special internal targets were recalculated and refreshed.

BeaconPolicyPropertyValue Table

The BeaconPolicyPropertyValue table contains beacon policy property value elements.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 66: Database columns for BeaconPolicyPropertyValue table

Database Column	Details
BeaconPolicyPropertyID	<i>Type:</i> integer. Key. Generated ID Unqiue ID assigned to each beacon policy property.

Database Column	Details
KeyName	<i>Type:</i> text (max 256 characters). Key Property Key.
Value	<i>Type</i> : text (max 256 characters) Property Value.

BeaconPropertyValue Table

The BeaconPropertyValue table contains beacon property value elements.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 67: Database columns for BeaconPropertyValue table

Database Column	Details
BeaconPropertyID	<i>Type:</i> integer. Key. Generated ID Unqiue ID assigned to each beacon property.
BeaconID	<i>Type:</i> integer. Key Beacon this property refers to.
KeyName	<i>Type:</i> text (max 256 characters). Key Property Key.
Value	<i>Type</i> : text (max 256 characters) Property Value.

BeaconRule Table

The BeaconRule table contains the details of beacon rules.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 68: Database columns for BeaconRule table

Database Column	Details	
BeaconRuleID	<i>Type:</i> integer. Key. Generated ID	
	The ID of the beacon rule.	
BeaconRuleActionID	<i>Type:</i> integer. Key	
	The reference of Action from the beacon rule.	
RuleName	<i>Type:</i> text (max 128 characters)	
	The name of the rule.	
RulePriority	<i>Type:</i> small integer	
	Beacon rules are prioritised according to the rule priority. Higher priority	
	takes presedence over lower priorities.	
MaximumAge	<i>Type:</i> integer. Nullable	
	Maximum age of the rule before it is re-scheduled.	
ExternalID	<i>Type:</i> unique identifier. Key	
	The ID that exists externally.	
BeaconScheduleData	<i>Type:</i> text	
	The Schedule object.	
Include	<i>Type:</i> boolean	
	Boolean string indicating to include or exclude rule.	
Internal	<i>Type:</i> boolean	
	Is this rule used internally, or managed by the user.	
NameResourceName	<i>Type:</i> text (max 256 characters). Nullable	
	Resource for translation of Name column. Foreign key to	
	ComplianceResourceString table.	

BeaconRuleAction Table

The BeaconRuleAction table contains beacon rule action.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 69: Database columns for BeaconRuleAction table

Database Column	Details
BeaconRuleActionID	<i>Type</i> : integer. Key. Generated ID Unique ID automatically assigned to each beacon actions.
Name	<i>Type:</i> text (max 100 characters). Key Name of Action.
Description	<i>Type:</i> text (max 256 characters). Nullable Description of Action.
NameResourceName	<i>Type:</i> text (max 256 characters). Nullable Resource for translation of Name column. Foreign key to the ComplianceResourceString table.
DescriptionResourceName	<i>Type</i> : text (max 256 characters). Nullable Resource for translation of Description column. Foreign key to the ComplianceResourceString table.
Internal	<i>Type:</i> boolean Is this action used internally, or managed by the user.

BeaconRuleActionPropertyValue Table

The BeaconRuleActionPropertyValue table contains beacon action property value elements.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 70: Database columns for BeaconRuleActionPropertyValue table

Database Column	Details
BeaconRuleAction PropertyID	<i>Type:</i> integer. Key. Generated ID Unqiue ID assigned to each beacon action property.
BeaconRuleActionID	<i>Type:</i> integer. Key Beacon action this property refers to.
KeyName	<i>Type:</i> text (max 256 characters). Key Property Key.

Database Column	Details
Value	<i>Type</i> : text Property Value.

BeaconRuleBeaconTargetMapping Table

Table that maps targets to rule.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 71: Database columns for BeaconRuleBeaconTargetMapping table

Database Column	Details
BeaconRuleID	<i>Type:</i> integer. Key Foreign key to the BeaconRule table.
BeaconTargetID	<i>Type:</i> integer. Key Foreign key to the BeaconTarget table.

BeaconSiteSubnetMapping Table

Table that maps site to Beacons.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 72: Database columns for BeaconSiteSubnetMapping table

Database Column	Details
BeaconID	<i>Type:</i> integer. Key Foreign key to the Beacon table.
SubnetID	<i>Type:</i> integer. Key Foreign key to the SiteSubnet table.

BeaconTarget Table

The BeaconTarget table contains beacon rule targets.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 73: Database columns for	r BeaconTarget table
--------------------------------	----------------------

Database Column	Details
BeaconTargetID	<i>Type:</i> integer. Key. Generated ID Unqiue ID automatically assigned to each beacon targets.
Name	<i>Type</i> : text (max 100 characters). Key Name identifying the target.
Description	<i>Type</i> : text (max 256 characters). Nullable Name identifying the target.
Internal	<i>Type</i> : boolean. Key Is this target used internally, or managed by the user.
Visible	<i>Type</i> : boolean Can this target be displayed to the user for selection etc. This does not apply to the actual Targets page.

BeaconTargetAgentEvent Table

Table that maps agent events to targets.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 74: Database columns for BeaconTargetAgentEvent table

Database Column	Details
BeaconTargetID	<i>Type:</i> integer. Key Foreign key to the BeaconTarge; table.
BeaconAgentEventUID	<i>Type:</i> unique identifier. Key Foreign key to the BeaconAgentEvent table.

BeaconTargetDiscoveredDeviceMapping Table

Table that maps site to targets.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 75: Database columns for BeaconTargetDiscoveredDeviceMapping table

Database Column	Details
BeaconTargetID	<i>Type:</i> integer. Key Foreign key to the BeaconTarget table.
DeviceID	<i>Type:</i> integer. Key Foreign key to the DiscoveredDevice table.
Include	<i>Type:</i> boolean Boolean string indicating to include or exclude Device.

BeaconTargetPropertyValue Table

The BeaconTargetPropertyValue table contains beacon target property value elements.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 76: Database columns for BeaconTargetPropertyValue table

Database Column	Details
BeaconTargetPropertyID	<i>Type:</i> integer. Key. Generated ID Unqiue ID assigned to each beacon target property.
BeaconTargetID	<i>Type:</i> integer. Key Beacon target this property refers to.
KeyName	<i>Type:</i> text (max 256 characters). Key Property Key.
Value	<i>Type:</i> text (max 4000 characters) Property Value.

BeaconTargetSiteMapping Table

Table that maps site to targets.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 77: Database columns for BeaconTargetSiteMapping table

Database Column	Details
BeaconTargetID	<i>Type:</i> integer. Key Foreign key to the BeaconTarget table.
SiteID	<i>Type:</i> integer. Key Foreign key to the Site table.
Include	<i>Type</i> : boolean Boolean string indicating to include or exclude Device.

BeaconTargetSiteSubnetMapping Table

Table that maps site to targets.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 78: Database columns for BeaconTargetSiteSubnetMapping table

Database Column	Details
BeaconTargetID	<i>Type:</i> integer. Key Foreign key to the BeaconTarget table.
SubnetID	<i>Type:</i> integer. Key Foreign key to the SiteSubnet table.
Include	<i>Type:</i> boolean Boolean string indicating to include or exclude Device.

BeaconUpgradeMode Table

BeaconUpgradeMode is a static table listing all of the styles of upgrade that a beacon can follow.

Table 79: Database columns for BeaconUpgradeMode table

Database Column	Details
BeaconUpgradeModeID	<i>Type</i> : integer. Key. Generated ID
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing the BeaconUpgradeMode record. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the state resource string has no translation.

BeaconUpgradeStatus Table

BeaconUpgradeStatus is a static table listing all of the upgrade states that a beacon can be in.

Table 80: Database columns for BeaconUpgradeStatus table

Database Column	Details
BeaconUpgradeStatusID	<i>Type</i> : integer. Key. Generated ID
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing the BeaconUpgradeStatus record. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 256 characters) The text to display if the state resource string has no translation.

BeaconWebServerStatus Table

BeaconWebServerStatus is a static table listing all of the states of the beacons web server.

Table 81: Database columns for	or BeaconWebServerStatus table
--------------------------------	--------------------------------

Database Column	Details
BeaconWebServerStatusID	<i>Type</i> : integer. Key. Generated ID

Database Column	Details
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing the BeaconWebServerStatus record. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters)
	The text to display if the state resource string has no translation.

DiscoveredDeviceDiscoveredBy Table

By which inventory beacon was this device discovered? Sometimes useful when other identifying features are duplicated, and when the distribution server should do something to the device.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Details
<i>Type</i> : integer. Key
The id of the device discovered.
<i>Type</i> : unique identifier. Key
The inventory beacon that discovered it.
<i>Type:</i> integer. Key. Nullable
The RuleID executed on the beacon that discovered the device.
<i>Type</i> : boolean. Nullable
Does the distribution server have administrative privileges for the device?
<i>Type</i> : datetime
The date and time that the distribution server last reported its discovery of
this device.
<i>Type:</i> integer. Key. Nullable
Account that can administer the device.
<i>Type</i> : integer. Key. Nullable
Account that can administer the device, overridden by the user.

Table 82: Database columns for DiscoveredDeviceDiscoveredBy table

DiscoveredDeviceDiscoveryStatus Table

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
DeviceID	<i>Type:</i> integer. Key
TaskTypeID	<i>Type</i> : integer. Key
BeaconRuleID	<i>Type:</i> integer. Key Rule that executed this task.
BeaconPolicyRevision Number	<i>Type:</i> integer The beacon policy revision number where rule is found
SessionUID	<i>Type:</i> unique identifier. Nullable
DiscoveryDate	<i>Type:</i> datetime. Nullable
RuleDiscoveryAction SummaryID	<i>Type:</i> integer Rule discovery summary.
BeaconUID	<i>Type:</i> unique identifier. Key. Nullable The inventory beacon that ran the task.

 Table 83: Database columns for DiscoveredDeviceDiscoveryStatus table

DiscoveredDeviceInventoryStatus Table

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 84: Database columns for DiscoveredDeviceInventoryStatus table

Database Column	Details
DeviceID	<i>Type:</i> integer. Key
TaskTypeID	<i>Type</i> : integer. Key
BeaconRuleID	<i>Type</i> : integer. Key. Nullable Rule that executed this task.

Database Column	Details
BeaconPolicyRevision Number	<i>Type:</i> integer. Nullable The beacon policy revision number where rule is found
SessionUID	<i>Type:</i> unique identifier. Nullable
InventoryDate	<i>Type:</i> datetime. Nullable
RuleInventoryAction	<i>Type:</i> integer
SummaryID	Rule action summary.
BeaconUID	<i>Type:</i> unique identifier. Key. Nullable
	The inventory beacon that ran the task.

DiscoveredDeviceTaskDetailedError Table

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 85: Database columns for DiscoveredDeviceTaskDetailedError table

Database Column	Details
DiscoveredDeviceTask DetailedErrorID	<i>Type:</i> integer. Key. Generated ID The ID of the discovered device error.
DiscoveredDeviceTask StatusHistoryID	<i>Type:</i> integer. Key Discovered device task status.
Status	<i>Type:</i> text (max 256 characters). Key The status code of task.
DetailedStatus	<i>Type:</i> text. Nullable The detailed error status.

DiscoveredDeviceTaskStatus Table

Records any task status information for DiscoveredDevice.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 86: Database columns for DiscoveredDeviceTaskStatus table

Database Column	Details
DiscoveredDeviceTask	<i>Type:</i> integer. Key. Generated ID
StatusID	The ID of the discovered device task.
DeviceID	<i>Type:</i> integer. Key
	Device identity number.
TaskTypeID	<i>Type:</i> integer. Key
	The type of task which was run on the device.
BeaconUID	<i>Type:</i> unique identifier. Key. Nullable
	The inventory beacon that has run the task.
BeaconRuleID	<i>Type:</i> integer. Key. Nullable
	Rule that executed this task.
Success	<i>Type:</i> boolean. Key
	Status of the task. It can be Success OR Failed
Credential	<i>Type:</i> text (max 256 characters). Nullable
	The credential name for the task performed.
Status	<i>Type:</i> text (max 256 characters)
	The status code of task.
DetailedStatus	<i>Type:</i> text. Nullable
	The detailed error status.
StartDateTime	<i>Type</i> : datetime
	Date and time the task was started.
BeaconPolicyRevision	<i>Type:</i> integer. Nullable
Number	The beacon policy revision number where rule is found
SessionUID	<i>Type:</i> unique identifier. Nullable
	An identifier TaskExecutionStatus table
IsSkipTask	<i>Type:</i> boolean
	Determines whether the task status is a skip task
IsDiscoveryTask	<i>Type:</i> boolean
	Determines whether the task status is a discovery task

DiscoveredDeviceTaskStatusHistory Table

Records any task status information for DiscoveredDevice.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
DiscoveredDeviceTask	<i>Type</i> : integer. Key. Generated ID
StatusHistoryID	The ID of the discovered device task.
DeviceID	<i>Type:</i> integer. Key
	Device identity number.
TaskTypeID	<i>Type:</i> integer. Key
	The type of task which was run on the device.
SessionUID	<i>Type</i> : unique identifier. Key
	An identifier TaskExecutionStatus table
BeaconUID	<i>Type</i> : unique identifier. Key
	The inventory beacon that has run the task.
BeaconRuleID	<i>Type:</i> integer. Key. Nullable
	Rule that executed this task.
Success	<i>Type</i> : boolean. Key
	Status of the task. It can be Success OR Failed
Credential	<i>Type:</i> text (max 256 characters). Nullable
	The credential name for the task performed.
Status	<i>Type</i> : text (max 256 characters)
	The status code of task.
DetailedStatus	<i>Type:</i> text. Nullable
	The detailed error status.
StartDateTime	<i>Type:</i> datetime
	Date and time the task was started.
BeaconPolicyRevision	<i>Type:</i> integer. Nullable
Number	The beacon policy revision number where rule is found

 Table 87: Database columns for DiscoveredDeviceTaskStatusHistory table

Database Column	Details
IsSkipTask	<i>Type:</i> boolean. Key Determines whether the task status is a skip task
IsDiscoveryTask	<i>Type:</i> boolean. Key Determines whether the task status is a discovery task

DiscoveredDeviceTaskType Table

This table stores the information about different types of tasks executed on a discovered device and their associated IDs.

Table 88: Database columns for DiscoveredDeviceTaskType table

Database Column	Details
TaskTypeID	<i>Type:</i> integer. Key. Generated ID The id for the task.
TaskTypeName	<i>Type:</i> text (max 32 characters). Key The name of the task.

ErrorCategory Table

Reported error category

Table 89: Database column	s for ErrorCategory table
---------------------------	---------------------------

Database Column	Details
ErrorCategoryID	<i>Type:</i> integer. Key. Generated ID The ID of the error category.
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a error category name. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

FNMEAAgent Table

The FNMEAAgent table stores the FNM-EA connection defined in inventory beacons.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 90: Database columns for FNMEAAgent table

Database Column	Details
FNMEAAgentID	<i>Type:</i> integer. Key. Generated ID Auto-generated FNMEA agent connection ID
BeaconID	<i>Type:</i> integer. Key. Nullable Beacon where the FNM-EA agent connection is defined
AgentIdentifier	<i>Type:</i> unique identifier. Key The GUID of the FNM-EA agent defined on inventory beacon.
AgentName	<i>Type:</i> text (max 128 characters) The FNM-EA agent name defined on inventory beacon.
LastReportedLogRotation	<i>Type</i> : datetime. Nullable Date time of the last report log rotation.
LastReportedAgentStatus	<i>Type:</i> datetime. Nullable Date time of the last reported status.

IncomingBaseline Table

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 91: Database columns for IncomingBaseline table

Database Column	Details
Туре	<i>Type</i> : text (max 16 characters). Key The baseline type
Date	<i>Type:</i> datetime. Key The date of the baseline data
ProductPool	<i>Type:</i> text (max 128 characters). Key The license product pool

Database Column	Details
ProductFamily	<i>Type:</i> text (max 256 characters). Key
	The license product family
ProductVersion	<i>Type:</i> text (max 50 characters). Key
	The license product version
EffectiveQuantity	<i>Type</i> : integer
	The effective quantity of the license
UpgradeQuantity	<i>Type</i> : integer
	The upgrade quantity of the license
UpgradeWithMaintenance	<i>Type</i> : integer
Quantity	The upgrade with maintenance quantity of the license
ActiveSAQuantity	<i>Type</i> : integer
	The active software assurance quantity of the license
ExpiringSA0To12Months	<i>Type</i> : integer
	The software assurance quantity expiring within 0-12 months
ExpiringSA12To24Months	<i>Type</i> : integer
	The software assurance quantity expiring within 12-24 months
ExpiringSA24PlusMonths	<i>Type</i> : integer
	The software assurance quantity expiring greater than 24 months

ReconcileSoftwareLicenseReconcileExemptionReason Table

The ReconcileSoftwareLicenseReconcileExemptionReason table stores the staging license reconcile generated exemption reasons.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 92: Database columns for ReconcileSoftwareLicenseReconcileExemptionReason table

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key Foreign key to the SoftwareLicense table

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the ComplianceComputer table
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the ComplianceUser table
SoftwareLicense	<i>Type:</i> integer. Key
ExemptionReasonID	Foreign key to the SoftwareLicenseExemptionReason table
AccessingUserID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the AccessingUser table

RuleDiscoveryActionSummary Table

Summary of the discovery action.

Table 93: Database columns for RuleDiscoveryActionSummary table

Database Column	Details
RuleDiscoveryAction SummaryID	<i>Type:</i> integer. Key. Generated ID The ID of the discovery action summary.
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing a discovery action summary. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters) The text to display if the type resource string has no translation.

RuleInventoryActionSummary Table

Summary of the inventory gathering action.

Table 94: Database columns for RuleInventoryActionSummary table

Database Column	Details
RuleInventoryAction	<i>Type:</i> integer. Key. Generated ID
SummaryID	The ID of the inventory gathering action summary.

Database Column	Details
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a discovery action summary. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

SoftwareLicenseReconcileExemptionReasonData Table

The SoftwareLicenseReconcileExemptionReasonData table stores the exemption reasons generated by the license reconcile.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key
	Foreign key to the SoftwareLicenseSnapshot table
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the ComplianceComputerSnapshot table
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the ComplianceUserSnapshot table
SoftwareLicense	<i>Type:</i> integer. Key
ExemptionReasonID	Foreign key to the SoftwareLicenseExemptionReason table
AccessingUserID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the AccessingUserSnapshot table
LicenseMeasurementID	<i>Type:</i> integer. Key
	The snapshot ID. Foreign key to the LicenseMeasurement table.

Table 95: Database columns for SoftwareLicenseReconcileExemptionReasonData table

StatusCodeCategory Table

Reported error category

Table 96: Database columns for StatusCodeCategory table

Database Column	Details
StatusCodeCategoryID	<i>Type:</i> integer. Key. Generated ID The ID of the error category.
StatusCode	<i>Type:</i> text (max 256 characters). Key Status code.
ErrorCategoryID	<i>Type:</i> integer. Nullable An identifier ErrorCategory table

UIAlignmentType Table

Database Column	Details
UIAlignmentTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each UIAlignmentType. Possible values are:
	• 1 = UseAvailableSpace
	• 2 = ForceLeft
	• 3 = ForceRight
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a insert
	type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters)
	The text to display if the type resource string has no translation.

UIFieldType Table

Table 98: Database columns for UIFieldType table

Database Column	Details
UIFieldTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each UIFieldType. Possible values are:
	• 1 = Tab
	• 2 = Section
	• 3 = Integer
	• 4 = Text box
	• 5 = Text area
	• 6 = Date
	• 7 = Date and time
	• 8 = Combo box
	• 9 = Check box
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a
	connection type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.

UIInsertType Table

Table 99: Database columns for UIInsertType table

Database Column	Details
UIInsertTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each UIInsertType. Possible values are:
	• 1 = Before
	• 2 = After
	• 3 = Start of

Database Column	Details
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing a insert type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters) The text to display if the type resource string has no translation.

Ulltem Table

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
UIItemID	<i>Type:</i> integer. Key. Generated ID
TargetTypeID	<i>Type:</i> integer. Key
	Type of object. Foreign key to the TargetType table.
ItemResourceName	<i>Type:</i> text (max 256 characters). Key
	Name of the item
ItemName	<i>Type:</i> text (max 256 characters)
	Name of the item
UIFieldTypeID	<i>Type:</i> integer. Nullable
	UI field type if the elemet type is of type 'field'. Foreign key to the
	UIFieldType table.
UIInsertTypeID	<i>Type:</i> integer
	Insert type. Foreign key to UIInsertType table.
UIAlignmentTypeID	<i>Type:</i> integer. Nullable
	Alignment type. Foreign key to UIAlignmentType table.
TabName	<i>Type:</i> text (max 80 characters)
	Name of the object to place the UI item.
RelativePositionTo	<i>Type:</i> text (max 80 characters)
	Name of the object to place the UI item.

Table 100: Database columns for UIItem table

Database Column	Details
Position	<i>Type</i> : integer
Width	<i>Type</i> : integer
DataSource	<i>Type</i> : XML. Nullable
	Date source for item of element type 'field' and of field type combo box
SequenceNumber	Type: integer
	Sequence where items to be added into UI
FromTable	<i>Type</i> : text. Nullable
	The name of the database table where the field can be found.
SelectName	<i>Type:</i> text. Nullable
	The name of the field in the database.
WhereClause	<i>Type:</i> text. Nullable
	The SQL "WHERE" statement that limits the information returned.
Required	<i>Type:</i> boolean
	Is the field a mandatory field.
StringLength	Type: integer
	String length.
ReadOnly	<i>Type:</i> boolean
	Is the field a readonly field.

UlltemTargetSubType Table

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 101: Database columns for UIItemTargetSubType table

Database Column	Details
UIItemTargetSubTypeID	<i>Type:</i> integer. Key. Generated ID
UIItemID	<i>Type:</i> integer. Key Type of object. Foreign key to the UIItem table.
TargetSubTypeID	<i>Type:</i> integer. Key object subtype. Foreign key to the various object type tables.

Compliance.Logic.Core Tables

The complete set of database tables documented here includes:

- Activity table (see Activity Table)
- ActivitySource table (see ActivitySource Table)
- ActivityTraceLog table (see ActivityTraceLog Table)
- ActivityType table (see ActivityType Table)
- Alert table (see Alert Table)
- AlertCategory table (see AlertCategory Table)
- AlertTarget table (see AlertTarget Table)
- AlertType table (see AlertType Table)
- AssetContractPaymentSchedule table (see AssetContractPaymentSchedule Table)
- Attribute table (see Attribute Table)
- AvailabilityZone table (see AvailabilityZone Table)
- BusinessImportLogDetail table (see BusinessImportLogDetail Table)
- BusinessImportLogObject table (see BusinessImportLogObject Table)
- BusinessImportLogSummary table (see BusinessImportLogSummary Table)
- BusinessImportResult table (see BusinessImportResult Table)
- CloudServiceInstance table (see CloudServiceInstance Table)
- CloudServiceInstanceMatchingRule table (see CloudServiceInstanceMatchingRule Table)
- CloudServiceInstanceType table (see CloudServiceInstanceType Table)
- CloudServiceProvider table (see CloudServiceProvider Table)
- CloudServiceRegion table (see CloudServiceRegion Table)
- ComplianceComputer table (see ComplianceComputer Table)
- ComplianceComputerConnection table (see ComplianceComputerConnection Table)
- ComplianceComputerContract table (see ComplianceComputerContract Table)
- ComplianceComputerInventorySourceType table (see ComplianceComputerInventorySourceType Table)
- ComplianceComputerPropertyValue table (see ComplianceComputerPropertyValue Table)
- ComplianceComputerRole table (see ComplianceComputerRole Table)
- ComplianceComputerRuleResult table (see ComplianceComputerRuleResult Table)
- ComplianceComputerStatus table (see ComplianceComputerStatus Table)

- ComplianceComputerType table (see ComplianceComputerType Table)
- ComplianceComputerTypeProperty table (see ComplianceComputerTypeProperty Table)
- ComplianceComputerUsage table (see ComplianceComputerUsage Table)
- ComplianceEvent table (see ComplianceEvent Table)
- ComplianceEventAction table (see ComplianceEventAction Table)
- ComplianceEventHistory table (see ComplianceEventHistory Table)
- ComplianceEventState table (see ComplianceEventState Table)
- ComplianceEventType table (see ComplianceEventType Table)
- ComplianceHistory table (see ComplianceHistory Table)
- ComplianceHistoryColumn table (see ComplianceHistoryColumn Table)
- ComplianceHistoryType table (see ComplianceHistoryType Table)
- ComplianceImage table (see ComplianceImage Table)
- ComplianceLicenseUser table (see ComplianceLicenseUser Table)
- CompliancePredefinedSearch table (see CompliancePredefinedSearch Table)
- ComplianceResponsibility table (see ComplianceResponsibility Table)
- ComplianceSavedSearch table (see ComplianceSavedSearch Table)
- ComplianceSchedule table (see ComplianceSchedule Table)
- ComplianceSearchFolder table (see ComplianceSearchFolder Table)
- ComplianceSearchType table (see ComplianceSearchType Table)
- ComplianceSearchTypeColumn table (see ComplianceSearchTypeColumn Table)
- ComplianceSearchTypeRelation table (see ComplianceSearchTypeRelation Table)
- ComplianceTask table (see ComplianceTask Table)
- ComplianceUserPropertyValue table (see ComplianceUserPropertyValue Table)
- ComplianceUserTypeProperty table (see ComplianceUserTypeProperty Table)
- ComputerChassisType table (see ComputerChassisType Table)
- ConsolidatedLicenseUser table (see ConsolidatedLicenseUser Table)
- ConsolidationType table (see ConsolidationType Table)
- Contract table (see Contract Table)
- ContractNote table (see ContractNote Table)
- ContractNotification table (see ContractNotification Table)

- ContractNotificationResponsibility table (see ContractNotificationResponsibility Table)
- ContractProperty table (see ContractProperty Table)
- ContractPropertyValue table (see ContractPropertyValue Table)
- ContractScopingData table (see ContractScopingData Table)
- ContractSecurityUser table (see ContractSecurityUser Table)
- ContractState table (see ContractState Table)
- ContractStatus table (see ContractStatus Table)
- ContractType table (see ContractType Table)
- ContractUseRight table (see ContractUseRight Table)
- ContractUseRightIBM table (see ContractUseRightIBM Table)
- ContractVendor table (see ContractVendor Table)
- CurrencyRate table (see CurrencyRate Table)
- CurrencyRateSnapshot table (see CurrencyRateSnapshot Table)
- CustomPropertyDisplayXML table (see CustomPropertyDisplayXML Table)
- DisplayXML table (see DisplayXML Table)
- Document table (see Document Table)
- DocumentHistory table (see DocumentHistory Table)
- DocumentNote table (see DocumentNote Table)
- DocumentType table (see DocumentType Table)
- Event table (see Event Table)
- EventLogCategory table (see EventLogCategory Table)
- EventLogDetail table (see EventLogDetail Table)
- EventLogLevel table (see EventLogLevel Table)
- EventLogStatus table (see EventLogStatus Table)
- EventLogSummary table (see EventLogSummary Table)
- EventParameter table (see EventParameter Table)
- EventParameterType table (see EventParameterType Table)
- EventSeverity table (see EventSeverity Table)
- EventTarget table (see EventTarget Table)
- EventType table (see EventType Table)

- EventTypeStatus table (see EventTypeStatus Table)
- ILMTPVUCounts table (see ILMTPVUCounts Table)
- ImportResolverErrorResult table (see ImportResolverErrorResult Table)
- ImportResolverType table (see ImportResolverType Table)
- InstalledSoftwareAttribute table (see InstalledSoftwareAttribute Table)
- Instance table (see Instance Table)
- InstanceAttribute table (see InstanceAttribute Table)
- InstanceEnvironment table (see InstanceEnvironment Table)
- InstancePropertyValue table (see InstancePropertyValue Table)
- InstanceRole table (see InstanceRole Table)
- InstanceTenancy table (see InstanceTenancy Table)
- InstanceType table (see InstanceType Table)
- InstanceTypeProperty table (see InstanceTypeProperty Table)
- InstanceUser table (see InstanceUser Table)
- IntervalType table (see IntervalType Table)
- LicenseUser table (see LicenseUser Table)
- LicenseUserConnection table (see LicenseUserConnection Table)
- LicenseUserExcluded table (see LicenseUserExcluded Table)

Activity Table

The Activity table stores errors and events processed by the beacon, devices, rules etc.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 102: Database columns for Activity table

Database Column	Details
ActivityID	<i>Type:</i> integer. Key. Generated ID Synthetic key for this table.
SourceTypeID	<i>Type:</i> integer The source type ID such as Beacon, External and so on
SourceTypeName	<i>Type:</i> text (max 256 characters) The source type name such as Beacon, External and so on
ActivityTypeID	<i>Type:</i> integer. Key Foreign key to the ActivityType table.
ActivityUID	<i>Type:</i> unique identifier. Key UID to uniquely identify the activity.
DateCreated	<i>Type</i> : datetime Time that the activity is created in the database.

ActivitySource Table

ActivitySource is a static table listing all of the Sources that can generate the activity logs.

Database Column	Details
ActivitySourceID	<i>Type</i> : integer. Key. Generated ID
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing the ActivitySource record. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the state resource string has no translation.

ActivityTraceLog Table

The ActivityTraceLog table stores the logs generated by the trace logger for the corresponding activity.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 104: Database columns for ActivityTraceLog table

Database Column	Details
TraceID	<i>Type:</i> integer. Key. Generated ID The unique row identifier.
ActivityUID	<i>Type:</i> unique identifier. Nullable
	The Guid of the activity that trace logger is logging the events for.
DateCreated	<i>Type:</i> datetime. Nullable The date and time when teh event occurred.
LogMessage	<i>Type:</i> text. Nullable The actual message logged by the trace logger.
LogLevel	<i>Type:</i> integer. Nullable The log level that the trace logger is logging to.
EventID	<i>Type:</i> integer. Key. Nullable The unique row identifier in negative form.

ActivityType Table

The ActivityType table stores details about the different types of Activities.

Database Column	Details
ActivityTypeID	<i>Type:</i> integer. Key. Generated ID Synthetic key for this table.
ActivityTypeName	<i>Type:</i> text (max 256 characters). Key A short piece of text representing the Activity Type. Internal use only- not to be displayed to the operator.
ActivityMessageResource	<i>Type:</i> text (max 256 characters) A resource name used to look up a description for this Activity
IsMonitored	<i>Type:</i> boolean Flag that determines whether to track this activity

Alert Table

The Alert table stores alerts and notifications that the system can attach to different objects to be displayed to the operator.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
AlertID	<i>Type:</i> integer. Key. Generated ID
	Synthetic key for this table.
AlertTypeID	<i>Type:</i> integer. Key
	Foreign key to the AlertType table.
Ignored	<i>Type:</i> boolean. Key
	This flag indicates whether this alert has been ignored by an operator. If so, then the IgnoredDate and IgnoredOperator values will be populated.
IgnoredDate	<i>Type:</i> datetime. Nullable
	TIf the alert has been ignored by an operator, then this field shows the date when this was done.
IgnoredOperator	<i>Type:</i> text (max 256 characters). Nullable
	If the alert has been ignored by an operator, then this field shows which
	operator ignored the alert.
CreationDate	<i>Type:</i> datetime
	Date and time (UTC) when alert was created.

Table 106: Database columns for Alert table

AlertCategory Table

The AlertCategory table stores the different catogories of alerts.

Table 107: Database columns for AlertCategory table

Database Column	Details
AlertCategoryID	<i>Type:</i> integer. Key. Generated ID Synthetic key for this table.

Database Column	Details
DefaultName	<i>Type:</i> text (max 128 characters) The default name for this alert category
ResourceName	<i>Type:</i> text (max 128 characters). Key A resource name used to look up a description for this alert category

AlertTarget Table

The AlertTarget table stores the links between alerts and other tables in the database.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
AlertID	<i>Type</i> : integer. Key Link to the Alert table
TargetTypeID	<i>Type:</i> integer. Key A link the the TargetType table. this value specifies which kind of object the alert is linked to.
TargetID	<i>Type:</i> integer. Key used to attach the Alert to its target. The target table depends on the TargetTypeID of the linked AlertType.
FieldName	<i>Type</i> : text. Nullable A semi-colon separated list of view-model names that represent the fields that the alert is attached to. A null value indicates that the alert applies to the overall object as a whole.

Table 108: Database columns for AlertTarget table

AlertType Table

The AlertType table stores details about the different types of alerts.

Table 109: Database columns for AlertType table

Database Column	Details
AlertTypeID	<i>Type:</i> integer. Key. Generated ID Synthetic key for this table.
AlertTypeName	<i>Type:</i> text (max 256 characters). Key A short piece of text representing the Alert Type. Internal use only- not to be displayed to the operator.
AlertMessageResource	<i>Type:</i> text (max 256 characters) A resource name used to look up a description for this alert
AlertCategoryID	<i>Type:</i> integer The category of this type of alert

AssetContractPaymentSchedule Table

AssetContractPaymentSchedule links a payment schedule to an asset, via a link from that asset to a contract.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 110: Database columns for AssetContractPaymentSchedule table

Database Column	Details
AssetContractPayment ScheduleID	<i>Type:</i> integer. Key. Generated ID Unique identifier to represent a link between a payment schedule and an asset. This allows an asset to link multiple times to a payment schedule, each time with its own start and end dates.
AssetContractID	<i>Type:</i> integer. Key Identifies a link between an asset and a contract. Foreign key to the AssetContract table.
PaymentScheduleID	<i>Type:</i> integer. Key Identifies a payment schedule. Foreign key to the PaymentSchedule table.
ActiveStartDate	<i>Type:</i> datetime Start date of the association between the payment schedule and asset.
ActiveEndDate	<i>Type:</i> datetime. Nullable End date of the association between the payment schedule and asset.

Attribute Table

Attribute holds the collection of possible attributes of database instances.

Table 111: Database	columns for	Attribute table
---------------------	-------------	-----------------

Database Column	Details
AttributeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for an attribute.
AttributeName	<i>Type:</i> text (max 256 characters). Key The name of the attribute.

AvailabilityZone Table

AvailabilityZone is a table listing the possible availability zone in a cloud service provider.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 112: Database columns for AvailabilityZone table

Database Column	Details
AvailabilityZoneID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a cloud service availability zone.
Name	<i>Type:</i> text (max 256 characters). Nullable Location of the instance.
IsShared	<i>Type:</i> boolean

BusinessImportLogDetail Table

The BusinessImportLogDetail table stores per record import execution details for a business import execution.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ImportDetailID	<i>Type:</i> integer. Key. Generated ID
	Surrogate ID that uniquely identifies an import execution detail.
ImportID	<i>Type:</i> integer. Key
	Business import ID this execution detail relates to, foreign key to
	BusinessImportLogSummary table.
RecordNumber	<i>Type:</i> integer. Nullable
	Row number of source data in staging table that this execution detail related
	to.
Action	<i>Type:</i> text (max 10 characters). Nullable
	The trace action of the import execution detail.
MGSRecordKey	<i>Type:</i> text (max 50 characters). Nullable
	ID of matching FNMS table record the Record Number is matched against.
ImportObjectID	<i>Type:</i> integer. Key. Nullable
	Import object that this execution detail is related to, foreign key to
	BusinessImportLogObject table.
RecordDescription	<i>Type:</i> text (max 255 characters). Nullable
	Value of the trace field specified in the import element of business adapter xml if any.
Message	<i>Type:</i> text (max 3000 characters). Nullable
	Messages related to this import execution detail.

Table 113: Database columns for BusinessImportLogDetail table

BusinessImportLogObject Table

The BusinessImportLogObject table stores summary data for the execution of individual object imports within a business import execution.

Table 114: Database columns for BusinessImportLogObject table

Database Column	Details
ImportObjectID	<i>Type</i> : integer. Key. Generated ID
	Surrogate ID that uniquely identifies an object in a business import execution.
ImportID	<i>Type:</i> integer. Key
	Business import ID this object belongs, foreign key to BusinessImportLogSummary table.
ObjectName	<i>Type:</i> text (max 50 characters). Nullable
	Name of the business import object.
ObjectType	<i>Type:</i> text (max 50 characters). Nullable
	Type of the business import object.
StartDate	<i>Type:</i> datetime. Nullable
	Date and time when the object began to be imported on FNMS server.
EndDate	<i>Type:</i> datetime. Nullable
	Date and time when import of the object is completed on FNMS server.
Status	<i>Type:</i> integer. Nullable
	Status of object import: 0 - Not completed, 1 - Completed.
Processed	<i>Type:</i> integer. Nullable
	Number of rows from data source that are processed for the object import.
Matched	<i>Type:</i> integer. Nullable
	Number of rows in the staging table that match records in the corresponding FNMS table for the object.
Rejected	<i>Type</i> : integer. Nullable
	Number of rows in the staging table that are rejected for the object import.
Updated	<i>Type:</i> integer. Nullable
	Number of rows in the staging table that are updated for the object import.
Created	<i>Type:</i> integer. Nullable
	Number of rows in the staging table that are created for the object import.
Deleted	<i>Type:</i> integer. Nullable
	Number of rows in the staging table that are deleted for the object import.

BusinessImportLogSummary Table

The BusinessImportLogSummary table stores summary data for each business import execution.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ImportID	<i>Type:</i> integer. Key. Generated ID
	Surrogate ID that uniquely identifies a business import.
ImportName	<i>Type:</i> text (max 255 characters). Nullable
	Import name of the business import.
ImportType	<i>Type:</i> text (max 50 characters). Nullable
	Import type of the business import.
Action	<i>Type:</i> text (max 20 characters). Nullable
	The mode the business import is operating in e.g. Import, Simulation.
StartDate	<i>Type:</i> datetime. Nullable
	Date and time when the business import is started on FNMS server.
EndDate	<i>Type:</i> datetime. Nullable
	Date and time when the business import is completed on FNMS server.
Status	<i>Type:</i> integer. Nullable
	Status of the business import: 0 - Not completed, 1 - Completed.
Processed	<i>Type:</i> integer. Nullable
	Number of rows from data source that are processed for import.
Rejected	<i>Type:</i> integer. Nullable
	Number of rows from data source that are rejected from importing.
SessionUID	<i>Type</i> : unique identifier. Key. Nullable
	Unique task run identifier of the business import, nullable for business
	import initiated on the server.

Table 115: Database columns for BusinessImportLogSummary table

BusinessImportResult Table

The BusinessImportResult table contains the results of all business imports executed on the batch server.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 116: Database columns for BusinessImportResult table

Database Column	Details
BusinessImportResultID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the business import result.
ImportName	<i>Type:</i> text (max 256 characters) The name of the business import.
BeaconID	<i>Type:</i> integer. Key A link to Beacon from which this import was uploaded.
ImportStarted	<i>Type</i> : datetime The time at which the import was executed.
ImportEnded	<i>Type</i> : datetime The time at which the import was completed.
Result	<i>Type</i> : boolean Whether the import succeeded.

CloudServiceInstance Table

CloudServiceInstance stores information for cloud service instances.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 117: Database columns for CloudServiceInstance table

Database Column	Details
CloudServiceInstanceID	<i>Type:</i> big integer. Key. Generated ID A unique identifier for cloud service instance on a computer.
ComplianceComputerID	<i>Type</i> : integer. Key. Nullable The computer where this cloud service instance is linked to. Foreign key to the ComplianceComputer table.

Database Column	Details
HostComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	The instance's host computer. Foreign key to the ComplianceComputer table.
HostID	<i>Type:</i> text (max 256 characters). Nullable
	The ID of the dedicated host instance.
CloudServiceProviderID	<i>Type:</i> integer. Key
	The cloud service provider for this instance. Foreign key to the CloudServiceProvider table.
InstanceCloudID	<i>Type:</i> text (max 256 characters). Key
	The ID of the cloud instance.
CloudServiceInstance	<i>Type:</i> integer. Nullable
TypeID	Cloud instance type defined by provider. Foreign key to the CloudServiceInstanceType table
CloudServiceRegionID	<i>Type:</i> integer. Nullable
	Region of the instance. Foreign key to the CloudServiceRegion table.
AvailabilityZoneID	<i>Type:</i> integer. Nullable
	Location of the instance. Foreign key to the AvailabilityZone table
InstanceTenancyID	<i>Type:</i> integer. Nullable
	Instance tenancy of the instance. Foreign key to the InstanceTenancy table
InstanceAffinity	<i>Type</i> : text (max 256 characters). Nullable
	The affinity setting for the instance on the Dedicated Host.
ImageID	<i>Type:</i> text (max 256 characters). Nullable
	The ID of the image used to launch the instance.
LaunchTime	<i>Type:</i> datetime. Nullable
	The time the cloud instance was launched or the Reserved Instance started.
NetworkID	<i>Type:</i> text (max 256 characters). Nullable
	The ID of the Virtual Private Cloud.
LifecycleMode	<i>Type:</i> text (max 256 characters). Nullable
	The lifecycle state of the instance.
ExpiryTime	<i>Type:</i> datetime. Nullable
	The time when the Reserved Instance expires.

Database Column	Details
InstanceCount	<i>Type</i> : integer. Nullable
	The number of reservations purchased.
OfferingClass	<i>Type:</i> text (max 256 characters). Nullable
	The offering class of the Reserved Instance.
OfferingType	<i>Type:</i> text (max 256 characters). Nullable
	The Reserved Instance offering type.
Scope	<i>Type:</i> text (max 256 characters). Nullable
	The scope of the Reserved Instance.
Account	<i>Type:</i> text (max 256 characters). Nullable
	The Account that is used to create the instance.
CoreCount	<i>Type</i> : integer. Nullable
	The number of core of the instance.
ThreadsPerCore	<i>Type:</i> integer. Nullable
	The number of thread per core of the instance.
VMEnabledStateID	<i>Type:</i> integer. Nullable
	The operational state of the instance. Foreign key to the VMEnabledState table.
MacAddress	<i>Type:</i> text (max 256 characters). Nullable The MAC address of the computer. This may be a comma-separated list if
	there is more than one active network adapter in the system. Do not include
	inactive network adapters and network adapters with invalid MAC addresses.
MatchingRuleID	<i>Type:</i> integer. Nullable
	Matching rule is used to match the instance with an inventory in Compliance
	Computer. Foreign key to the CloudServiceInstanceMatchingRule table.
InventoryDate	<i>Type:</i> datetime. Key. Nullable
	The time the cloud instance was reported.

CloudServiceInstanceMatchingRule Table

The CloudServiceInstanceMatchingRule table contains the list of rules to match cloud service instance with an inventory in ComplianceComputer table.

Database Column	Details
CloudServiceInstance MatchingRuleID	 Type: integer. Key. Generated ID A unique identifier for each CloudServiceInstanceMatchingRule. Possible values and the corresponding default strings are: 1 = Inventory 2 = MACAddress 3 = MGSBI 4 = UI
Name	<i>Type:</i> text (max 256 characters). Key Name of the matching rule for cloud service instance.

Table 118: Database columns for CloudServiceInstanceMatchingRule table

CloudServiceInstanceType Table

CloudServiceInstanceType is a table listing the possible types of a cloud service instance.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 119: Database columns for CloudServiceInstanceType table

Database Column	Details
CloudServiceInstance TypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for a cloud service instance type.
Name	<i>Type:</i> text (max 256 characters). Nullable Cloud instance type defined by cloud service provider.
IsShared	<i>Type:</i> boolean

CloudServiceProvider Table

The CloudServiceProvider table contains the Cloud Service providers for the virtual machines.

Table 120: Database columns for CloudServiceProvider table

Database Column	Details
CloudServiceProviderID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a cloud service provider record.
Name	<i>Type:</i> text (max 256 characters). Key Name of the cloud service provider.
IsShared	<i>Type:</i> boolean

CloudServiceRegion Table

Region is a table listing the possible regions in a cloud service provider.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 121: Database columns for CloudServiceRegion table

Database Column	Details
CloudServiceRegionID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a cloud service region.
Name	<i>Type:</i> text (max 256 characters). Nullable Region of the instance.
IsShared	<i>Type:</i> boolean

ComplianceComputer Table

ComplianceComputer stores information about computers used in the enterprise, including hardware details, inventory source information and computer types.

Table 122: Database columns for ComplianceComputer table

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a ComplianceComputer.
ComplianceComputerTypeID	<i>Type:</i> integer. Key
	A unique identifier for the type of computer. Foreign key to the
	ComplianceComputerType table.
IsComplianceComputer	<i>Type</i> : boolean
TypeIDFromInventory	This is true for records sourced from inventory, where the inventory source
	has specified the value of the ComplianceComputerTypeID. A true value will exclude this record from some processes that infer the type of a record. This
	value is set by the import process.
ComputerName	<i>Type</i> : text (max 256 characters). Key. Nullable
	The name of the computer.
ComplianceDomainID	<i>Type:</i> integer. Key. Nullable
	The domain to which the computer belongs. Foreign key to the
	ComplianceDomain table.
ComplianceComputer	<i>Type</i> : integer. Key
StatusID	The last recorded status for this computer. Foreign key to the
	ComplianceComputerStatus table.
ComplianceComputerRoleID	<i>Type</i> : integer. Key
	The functional role of this computer. Foreign key to the
	ComplianceComputerRole table.
ComplianceComputer	<i>Type</i> : integer. Key
InventorySourceTypeID	Whether this computer has ever been reported in inventory, or has been
	manually created and maintained. Foreign key to the ComplianceComputerInventorySourceType table.
AssetID	<i>Type</i> : integer. Key. Nullable
	When the computer is being managed as an asset, this is a foreign key to the Asset table; and is otherwise null.
OperatingSystem	<i>Type:</i> text (max 128 characters). Nullable
	The operating system of the computer.
ServicePack	Type: text (max 128 characters). Nullable
	The latest service pack reported as installed on the operating system.

Database Column	Details
NumberOfProcessors	<i>Type:</i> integer. Nullable
	The number of processors in the computer.
NumberOfProcessorsDefault	<i>Type:</i> integer. Nullable
	The inventoried number of processors in the computer.
ProcessorType	<i>Type:</i> text (max 256 characters). Nullable
	The type of processor in the computer.
ProcessorTypeDefault	<i>Type:</i> text (max 256 characters). Nullable
	The inventoried type of processor in the computer.
MaxClockSpeed	<i>Type:</i> integer. Nullable
	The maximum clock speed of the fastest processor in the computer in megahertz.
MaxClockSpeedDefault	<i>Type:</i> integer. Nullable
	The inventoried maximum clock speed of the fastest processor in the computer in megahertz.
TotalMemory	<i>Type:</i> big integer. Nullable
	The total RAM in the computer.
ChassisTypeID	<i>Type:</i> integer. Key
	The type of case for the computer, as reported in hardware inventory, defaulting to Unknown if no chassis type is reported. Foreign key to the
	ComputerChassisType table.
AssignedChassisTypeID	<i>Type:</i> integer. Nullable
	The type of case for the computer, as set by an operator. Foreign key to the ComputerChassisType table.
NumberOfHardDrives	<i>Type:</i> integer. Nullable
	The number of hard drives in the computer.
TotalDiskSpace	<i>Type:</i> big integer. Nullable
	The total size of all hard drives in the computer.
NumberOfNetworkCards	<i>Type:</i> integer. Nullable
	The number of network cards in the computer.
NumberOfDisplayAdapters	<i>Type:</i> integer. Nullable
	The number of graphics cards in the computer.
IPAddress	<i>Type:</i> text (max 256 characters). Nullable
	The IP address of the computer.

Database Column	Details
MACAddress	<i>Type:</i> text (max 256 characters). Nullable
	The MAC Addresses of the computer.
Manufacturer	<i>Type:</i> text (max 128 characters). Key. Nullable
	The manufacturer of the computer.
ModelNo	<i>Type</i> : text (max 128 characters). Nullable
	The model number of the computer.
ModelNoDefault	<i>Type</i> : text (max 128 characters). Nullable
	The inventoried model number of the computer.
SerialNo	Type: text (max 100 characters). Key. Nullable
	The serial number of the computer.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	The end-user who last logged onto the computer. Foreign key to the ComplianceUser table.
AssignedUserID	<i>Type:</i> integer. Key. Nullable
	The end-user assigned to this computer by an operator. Foreign key to the ComplianceUser table.
CalculatedUserID	<i>Type:</i> integer. Key. Nullable
	An end-user of this computer, calculated by looking at usage. Foreign key to the ComplianceUser table.
LocationID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any enterprise location associated with this computer. Foreign key to the GroupEx table.
BusinessUnitID	<i>Type</i> : text (max 128 characters). Key. Nullable
	Any corporate unit in the enterprise associated with this computer. Foreign key to the GroupEx table.
CostCenterID	<i>Type</i> : text (max 128 characters). Key. Nullable
	Any cost center in the enterprise associated with this computer. Foreign key to the GroupEx table.
CategoryID	<i>Type</i> : text (max 128 characters). Key. Nullable
	Any enterprise category associated with this computer. Foreign key to the GroupEx table.
InventoryDate	<i>Type</i> : datetime. Key. Nullable
	The date the computer last had inventory reported.

Database Column	Details
HardwareInventoryDate	<i>Type:</i> datetime. Nullable
	The date when the hardware was last reported.
ServicesInventoryDate	<i>Type:</i> datetime. Nullable
	The date when a service was last reported.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The name of the operator who last updated the computer details.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the computer was created.
InventoryAgent	<i>Type:</i> text (max 64 characters). Nullable
	The name of the person or tool that performed the last inventory.
NumberOfCores	<i>Type:</i> integer. Nullable
	The number of cores in the computer.
NumberOfCoresDefault	<i>Type:</i> integer. Nullable
	The inventoried number of cores in the computer.
NumberOfSockets	<i>Type:</i> integer. Nullable
	The number of sockets in the computer.
NumberOfSocketsDefault	<i>Type:</i> integer. Nullable
	The inventoried number of sockets in the computer.
AssetComplianceStatusID	<i>Type:</i> integer. Nullable
	For computers managed as assets, the latest compliance status of the computer. Foreign key to the AssetComplianceStatus table.
PartialNumberOfProcessors	<i>Type:</i> decimal. Nullable
	The fractional processor count available to this computer.
PartialNumberOf	<i>Type:</i> decimal. Nullable
ProcessorsDefault	The inventoried fractional processor count available to this computer.
UntrustedSerialNo	<i>Type:</i> boolean
	Is this computer known to have a serial number from a data source that should not be trusted.

Database Column	Details
ILMTAgentID	<i>Type:</i> big integer. Key. Nullable
	Store the unique ID used by the ILMT agent on this device, if the inventory source is aware of this value.
FNMPComputerUID	<i>Type:</i> unique identifier. Key. Nullable
	The unique identifier generated for the computer from the IM database. This property should only be populated by the ManageSoft inventory adapter.
UUID	<i>Type:</i> unique identifier. Nullable
	The computer's UUID, in the byte order reported in inventory.
HostIdentifyingNumber	<i>Type:</i> text (max 128 characters). Key. Nullable
-	Virtual hosts may have an identifier that is unique only across that hardware model. It is less unique than the true hardware serial number, for example.
HostType	<i>Type:</i> text (max 128 characters). Key. Nullable
	The type (similar to model number) of the host, used for matching.
NumberOfLogicalProcessors	<i>Type:</i> integer. Nullable
	The number of logical processors in the computer.
NumberOfLogical	<i>Type:</i> integer. Nullable
ProcessorsDefault	The inventoried number of logical processors in the computer.
PrimaryComplianceUserID	<i>Type:</i> integer. Key. Nullable
	Primary user of the computer based off the assigned user and calculated user.
MDScheduleGeneratedDate	<i>Type:</i> datetime. Nullable
	The last time the managed device schedule was regenerated.
MDScheduleContainsPVUScan	<i>Type:</i> boolean. Nullable
	Does this managed device include an event in its current schedule for running extra IBM PVU hardware scans.
HostID	<i>Type:</i> text (max 100 characters). Key. Nullable
	Numeric identifier of the current host
FirmwareSerialNumber	<i>Type:</i> text (max 100 characters). Key. Nullable
	Serial number in the system firmware such as BIOS, EEPROM etc.
MachineID	<i>Type:</i> text (max 100 characters). Key. Nullable
	For AIX, it is the System ID. For HP-UX, it is the Machine/Software ID. It is unset for other platforms.

Database Column	Details
CloudServiceProviderID	<i>Type</i> : integer. Key. Nullable The cloud service provider for the virtual machine. Foreign key to the CloudServiceProvider table.

ComplianceComputerConnection Table

ComplianceComputerConnection stores a link between computers in ComplianceComputer which have been reported in inventory, and external IDs that can be used to identify them in their inventory sources. Computers reported in multiple inventory sources will appear multiple times in this table.

🗎 N

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key A unique identifier for the computer. Foreign key to the ComplianceComputer table.
ComplianceConnectionID	<i>Type:</i> integer. Key The inventory source where the computer was reported. Foreign key to the ComplianceConnection table.
ExternalID	<i>Type:</i> big integer The (hopefully unique) identifier for the computer in the external inventory source.

ComplianceComputerContract Table

ComplianceComputerContract stores links between computers and contracts, some of which may influence license compliance.

Database Column	Details
ComplianceComputer	<i>Type:</i> integer. Key. Generated ID
ContractID	A unique identifier for this record.
ContractID	<i>Type:</i> integer. Key
	A unique identifier for a contract linked to a computer. Foreign key to the Contract table.
ComplianceComputerID	<i>Type</i> : integer. Key
	A unique identifier for a computer linked to a contract. Foreign key to the
	ComplianceComputer table.

Table 124: Database columns for ComplianceComputerContract table

ComplianceComputerInventorySourceType Table

ComplianceComputerInventorySourceType is a static table used to define possible computer inventory source values (that is, whether the computer was created manually or reported by the compliance importer).

Database Column	Details
ComplianceComputer InventorySourceTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each ComplianceComputerInventorySourceType. Possible values and the corresponding default strings are:
	 1 = Automatic (computer was recently updated during an inventory import)
	 2 = VM Host (a dummy or "light" computer created using the host inventory of a virtual machine)
	 3 = Manual (computer was created manually by an operator, using FlexNet Manager Suite, and has never been updated by the compliance importer).
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a computer inventory source. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the inventory resource string has no translation.

Table 125: Database columns for ComplianceComputerInventorySourceType table

ComplianceComputerPropertyValue Table

For each computer, ComplianceComputerPropertyValue stores the values for the custom properties defined in ComplianceComputerTypeProperty.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceComputer	<i>Type:</i> integer. Key. Generated ID
PropertyValueID	A unique identifier for a property value.
ComplianceComputerID	<i>Type:</i> integer. Key
	The computer associated with this property value. Foreign key to the ComplianceComputer table
ComplianceComputerType	<i>Type:</i> integer. Key
PropertyID	The property whose value is being stored. The type of the computer should match the type that the property is associated with. Foreign key to the ComplianceComputerTypeProperty table.
PropertyValue	<i>Type:</i> text (max 4000 characters)
	The value of the custom property.
CreationUser	Type: text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
UpdatedUser	Type: text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.

Table 126: Database columns for ComplianceComputerPropertyValue table

ComplianceComputerRole Table

ComplianceComputerRole is a static table listing all the different roles to which computers can be assigned, and which may impact licensing terms.

Database Column	Details
ComplianceComputerRoleID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each ComplianceComputerRole. Possible values and the corresponding default strings are:
	• 1 = Production
	• 2 = Warm Standby / Passive Failover
	• 3 = Hot Standby / Active Failover
	• 4 = Backup / Archive
	• 5 = Test
	• 6 = Training
	• 7 = Cold Standby / Disaster recovery
	• 8 = Development.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a computer role. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the inventory resource string has no translation.
ManageLicenses	<i>Type:</i> boolean
	Set this to True if computers in this role are to be included in compliance calculations, and to False if this role exempts a computer from the license management process. Of the computer roles listed above, only Active computers have their licenses managed.

Table 127: Database columns for ComplianceComputerRole table

ComplianceComputerRuleResult Table

ComplianceComputerRuleResult stores rules results from Inventory Manager.

Database Column	Details
ComplianceComputerRule	<i>Type:</i> integer. Key. Generated ID
ResultID	The identifier for a rule result.
ComplianceComputerID	<i>Type:</i> integer. Key
	The computer associated with this result. Foreign key to the
	ComplianceComputer table
RecognitionRule	<i>Type:</i> text (max 256 characters). Key. Nullable
	The recognition rule.
Revision	<i>Type:</i> integer. Nullable
	The revision number of the recognition rule.
InventoryDate	<i>Type:</i> datetime. Nullable
	The date the recognition rule ran.
Result	<i>Type:</i> text. Nullable
	The result of the recognition rule script.

Table 128: Database columns for ComplianceComputerRuleResult table

ComplianceComputerStatus Table

ComplianceComputerStatus is a static table used to define possible values for the status of computers reported in FlexNet Manager Suite.

Table 129: Database columns for ComplianceComputerStatus table
--

Database Column	Details
ComplianceComputer	<i>Type:</i> integer. Key. Generated ID
StatusID	A unique identifier for each ComplianceComputerStatus. Possible values and the corresponding default strings are:
	• 1 = New (this is the first appearance of this computer in inventory)
	• 2 = Ignored (an operator has marked this computer to be ignored)
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a computer status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the status resource string has no translation.

ComplianceComputerType Table

ComplianceComputerType is a static table listing all types of computers that can be created.

Table 130: Database columns for ComplianceComputerType table

Database Column	Details
ComplianceComputerTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each ComplianceComputerType. Possible values and the corresponding default strings are:
	• 1 = Computer
	• 2 = VM Host
	• 3 = Virtual Machine
	• 4 = Remote Device.
	• 5 = Mobile Device.
	• 6 = VDI Template.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a computer role. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.
XMLFile	<i>Type:</i> text. Nullable
	The layout of the property dialog for this type of computer, stored in XML format.
CanCreate	<i>Type:</i> boolean. Key
	Whether the end-user can manually create computers of this type.
CanEdit	<i>Type:</i> boolean. Key
	Whether the end-user can manually edit computers of this type.

ComplianceComputerTypeProperty Table

ComplianceComputerTypeProperty defines extra custom properties for computers of the specified type.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceComputerType PropertyID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a property.
PropertyName	<i>Type:</i> text (max 256 characters). Key The name of the property.
ComplianceComputerTypeID	<i>Type:</i> integer. Key Computer type with which this property is associated. Foreign key to the ComplianceComputerType table.
CustomPropertyDisplayX MLID	<i>Type:</i> integer. Nullable Foreign key to a record in the CustomPropertyDisplayXML table, describing how to show the property on a property dialog.

Table 131: Database columns for ComplianceComputerTypeProperty table

ComplianceComputerUsage Table

This table links user IDs with computer IDs, allowing ECM to determine who uses a computer most frequently; and this is one factor in determining the assigned user for a computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 132: Database columns for ComplianceComputerUsage table

Database Column	Details
ComplianceComputerUsageID	<i>Type:</i> integer. Key. Generated ID Unique identifier for a ComplianceComputerUsage record.
ComplianceComputerID	<i>Type:</i> integer. Key Foreign key to the ComplianceComputer table.
ComplianceUserID	<i>Type:</i> integer. Key Foreign key to the ComplianceUser table.
DateRecorded	<i>Type:</i> datetime. Key The date and time that the record was inserted.

ComplianceEvent Table

The ComplianceEvent table lists all the 'compliance events' that FlexNet Manager Suite has detected. These are any event, such as the arrival of a new application version or a change in primary application for a license, that should trigger recalculation of linked applications through upgrade and downgrade rights. Depending on license properties, some of these events trigger automatic recalculation, and others trigger a proposal to the operator for manual response. This table records the current state for each event, with a history of state changes available in the ComplianceEventHistory table. Where the compliance event results in changes to the applications linked to a license, further details are recorded in the SoftwareLicenseChangeEvent table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceEventID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for an event.
EventTypeID	<i>Type</i> : integer
	The type of event. Foreign key to the ComplianceEventType table.
Priority	<i>Type</i> : integer. Nullable
	The priority of the event.
Severity	<i>Type</i> : integer. Nullable
	The severity of the event.
EventActionID	<i>Type</i> : integer
	The proposed action for the event. Foreign key to the
	ComplianceEventAction table.
EventStateID	<i>Type</i> : integer
	The current state of the event. Foreign key to the ComplianceEventState
	table.
UpdatedBy	<i>Type</i> : text (max 200 characters)
	The last operator to update the event.
UpdatedDate	<i>Type</i> : datetime
	The date the event was last updated.

Table 133: Database columns for ComplianceEvent table

ComplianceEventAction Table

The ComplianceEventAction table holds the list of possible actions in the handling of 'compliance events'. These are any event, such as the arrival of a new application version or a change in primary application for a license, that should trigger recalculation of linked applications through upgrade and downgrade rights.

Database Column	Details
EventActionID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each ComplianceEventAction. Possible values and the corresponding default strings are:
	 1 = Notification (the event is automatically managed, and the operator is to be advised of the result)
	• 2 = Request for Action (the license is not managed automatically, and the operator receives a suggested action).
EventActionResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an event type. Foreign key to the ComplianceResourceString table.
EventActionDefaultValue	Type: text (max 100 characters)
	The text to display if the type resource string has no translation.

ComplianceEventHistory Table

ComplianceEventHistory stores a history of state changes for each compliance event.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 135: Database columns for ComplianceEventHistory table

Database Column	Details
ComplianceEventHistoryID	<i>Type:</i> integer. Key. Generated ID Unique identifier for an event history record.
ComplianceEventID	<i>Type:</i> integer. Key The event whose history is being recorded. Foreign key to the ComplianceEvent table.

Database Column	Details
UserName	<i>Type:</i> text (max 60 characters)
	The operator who made the change.
HistoryDate	<i>Type</i> : datetime
	The date of the change.
FieldName	<i>Type</i> : text (max 256 characters). Nullable
	The field name that has been updated. Foreign key to the
	ComplianceResourceString table.
OldValue	<i>Type</i> : text (max 500 characters). Nullable
	The value before the change.
NewValue	<i>Type:</i> text (max 500 characters). Nullable
	The value after the change.

ComplianceEventState Table

ComplianceEventState is a static table holding all possible event states.

Table 136: Database	columns for	ComplianceEventState table
---------------------	-------------	----------------------------

Database Column	Details
EventStateID	 Type: integer. Key. Generated ID A unique identifier for each ComplianceEventState. Possible values and the corresponding default strings are: 1 = New (action needs to be taken for this event) 2 = Postponed (no action needs to be taken at this time) 3 = Accepted (the proposed action has been taken for this event) 4 = Rejected (the proposed action will not be taken).
EventStateResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing an event state. Foreign key to the ComplianceResourceString table.
EventStateDefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the state resource string has no translation.

ComplianceEventType Table

ComplianceEventType is a static table that holds all possibles types of event.

Table 137: Database columns for ComplianceEventType table

Database Column	Details
EventTypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each ComplianceEventType. Reserved for future expansion. Possible values and the corresponding default strings are: • 1 = Software License Change.
EventTypeResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing an event type. Foreign key to the ComplianceResourceString table.
EventTypeDefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

ComplianceHistory Table

The ComplianceHistory table records changes to many entities used in FlexNet Manager Suite. This table has a series of ID columns, any one (or sometimes more) of which may be set to associate the history with a particular item. These ID columns no longer have foreign keys to other tables. This allows us to retain history of deleted objects in order to maintain an audit trail (as yet, there is no UI around this information), and also to improve performance when deleting objects.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 138: Database columns for ComplianceHistory table

Database Column	Details
ComplianceHistoryID	<i>Type</i> : big integer. Key. Generated ID Unique identifier for a history record.
AssetID	<i>Type:</i> integer. Key. Nullable ID from the Asset table.
ComplianceComputerID	<i>Type</i> : integer. Key. Nullable ID from the ComplianceComputer table.

Database Column	Details
ContractID	<i>Type:</i> integer. Key. Nullable
	ID from the Contract table.
VendorID	<i>Type:</i> integer. Key. Nullable
	ID from the Vendor table.
VirtualMachineID	<i>Type</i> : integer. Nullable
	ID from the VirtualMachine table.
PurchaseOrderID	<i>Type</i> : integer. Nullable
	ID from the PurchaseOrder table.
PurchaseOrderDetailID	<i>Type</i> : integer. Key. Nullable
	ID from the PurchaseOrderDetail table.
SoftwareLicenseID	<i>Type</i> : integer. Key. Nullable
	ID from the SoftwareLicense table
SoftwareTitleID	<i>Type</i> : integer. Key. Nullable
	ID from the SoftwareTitle table
PaymentScheduleID	<i>Type</i> : integer. Key. Nullable
	ID from the PaymentSchedule table
InstanceID	<i>Type</i> : integer. Key. Nullable
	ID from the Instance table
ComplianceUserID	<i>Type</i> : integer. Key. Nullable
	ID from the ComplianceUser table
ComplianceOperatorID	<i>Type</i> : integer. Nullable
	ID from the ComplianceOperator table
DocumentID	<i>Type</i> : integer. Key. Nullable
	ID from the Document table
DocumentNoteID	<i>Type:</i> integer. Nullable
	ID from the DocumentNote table
ContractNoteID	<i>Type:</i> integer. Nullable
	ID from the ContractNote table
ProjectID	<i>Type:</i> integer. Key. Nullable
	ID from the Project table

Database Column	Details
FieldName	<i>Type:</i> text (max 256 characters). Nullable
	The field name that has been updated. Foreign key to the ComplianceResourceString table.
OldValue	<i>Type:</i> text (max 4000 characters). Nullable
	Typically the value before the change, although at times, when multiple pieces of information are required to identify the action taking place, this field may store other supporting information. For example, when an operator is granted rights to access a contract, this field stores the type of access (such as "Normal" or "Administrator") while the NewValue field stores the name of the contract.
NewValue	<i>Type:</i> text (max 4000 characters). Nullable
	Typically the value after the change, although refer to the above definition of the OldValue column for a description of extenuating circumstances.
NeedsApproval	<i>Type:</i> boolean
	Set this field to True if the change requires approval. Used usually to track changes to computer hardware.
ValuesAreResourceStrings	<i>Type:</i> boolean
	Set this field to True if the old and new values should be looked up as resource strings.
ComplianceHistoryTypeID	<i>Type</i> : integer
	Foreign key to the HistoryType table.
UserName	<i>Type:</i> text (max 60 characters)
	The operator who made the change.
HistoryDate	<i>Type:</i> datetime. Key
	The date of the change.
Comments	<i>Type</i> : text (max 2000 characters). Nullable
	Comments recorded about the change after it was made.

ComplianceHistoryColumn Table

The ComplianceHistoryColumn table lists the fields (columns) for which history details can be recorded.

Table 139: Database columns for ComplianceHistoryColumn table

Database Column	Details
ComplianceHistoryColumnID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a history column.
TableName	<i>Type</i> : text (max 128 characters). Key The name of the database table to which the history-record settings apply. This may have a suffix of .1 or .2. These suffixes are used for grouping purposes. Do not edit this field.
ColumnName	<i>Type:</i> text (max 128 characters). Key A description of the column in the specified TableName for which the history record settings apply. If this row relates to an entire table, the ColumnName will contain the word "History", for example, "Asset History" or "Contract History".
BitwiseValue	<i>Type:</i> integer. Key The bitwise value uniquely identifies each row relating to a single TableName. Typically, a value of 1 indicates that this row relates to an entire table. A value greater than 1 indicates that this row relates to a single field in the table. Do not edit this field.
RecordHistory	<i>Type:</i> boolean Boolean field to indicate if history should be recorded. Set this value to 1 (True) to record history details. Set this value to 0 (False) if no history details should be recorded.

ComplianceHistoryType Table

ComplianceHistoryType is a static table listing all valid types of history records.

Table 140: Database columns for ComplianceHistoryType table

Database Column	Details
ComplianceHistoryTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a history type.

Database Column	Details
ComplianceHistoryType	<i>Type:</i> text (max 100 characters)
Description	A unique identifier for each ComplianceHistoryType. Possible values and the corresponding default strings are:
	• 1 = Insert
	• 2 = Delete
	• 3 = Update
	• 4 = Link
	• 5 = Unlink
	• 6 = Allocated
	• 7 = Unallocated
	• 8 = Assigned
	• 9 = Unassigned
	 10 = Operator unlinked from user due to duplicate login (operator history)
	• 11 = Operator unlinked from user due to duplicate login (user history)
	• 12 = Rights to contract granted
	• 13 = Rights to contract updated
	• 14 = Rights to contract removed
	• 15 = Rights to document granted
	• 16 = Rights to document updated
	• 17 = Rights to document removed
	• 18 = Receives (referring to escalations or alerts)
	• 19 = No longer receives (referring to escalations or alerts)
	• 20 = Assigned responsibility
	• 21 = Unassigned responsibility
	• 22 = Final state of entity when deleted
	• 23 = Rights to contract removed because contract was deleted
	• 24 = Rights to document removed because document was deleted
	 25 = No longer receives (referring to escalations or alerts) because entity deleted

Database Column	Details
	 26 = Unassigned responsibility because entity was deleted 27 = Responsibility type changed.
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a history type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

ComplianceImage Table

The ComplianceImage table stores a collection of images to use on property display dialogs.

Table 141: Database columns for ComplianceImage table

Database Column	Details
ComplianceImageName	<i>Type:</i> text (max 50 characters). Key The name of the image.
ComplianceImageFile	<i>Type</i> : text The binary representation of the image.

ComplianceLicenseUser Table

If external end-users, reported by systems such as SAP and stored in the LicenseUser table, can be matched to existing end-users in the enteprise (stored in the ComplianceUser table), the link between them is recorded in the ComplianceLicenseUser table.

Database Column	Details
LicenseUserID	<i>Type:</i> integer. Key A unique identifier for the external end-user. Foreign key to the LicenseUser table.

Database Column	Details
ComplianceUserID	<i>Type:</i> integer. Key A unique identifier for the end-user in the enterprise. Foreign key to the ComplianceUser table.

CompliancePredefinedSearch Table

The CompliancePredefinedSearch holds a list of the predefined asset and licenses searches available to the operator. Each predefined search has its own grid in the FlexNet Manager Suite UI, and is accessed from a node which is a child of either Licenses or Assets nodes.

Database Column	Details
CompliancePredefined SearchID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each CompliancePredefinedSearch. Possible values and the corresponding default strings are: • 1 = New Inventory
	 2 = Changed Assets 3 = Lease Expiry
	 4 = Warranty Expiry
	• 5 = Missing Computers
	• 6 = License At Risk
	• 7 = License Expiry
	• 8 = License Contract Expiry
	• 9 = License Unused
	• 10 = UnLicensed Apps
	• 11 = UnLicensed Installs
	• 12 = License Group At Risk
	• 13 = License Upgrade Downgrade.
SearchNameResource	<i>Type:</i> text (max 128 characters). Key
	Resource string identifying the predefined search.
SearchNameDefault	<i>Type:</i> text (max 128 characters)
	The name of the predefined search.

Database Column	Details
AmberThreshold	<i>Type</i> : integer Indicates when the amber state should be shown in the related traffic light summary.
RedThreshold	<i>Type:</i> integer Indicates when the red state should be shown in the related traffic light summary.
DateSearch	<i>Type:</i> boolean. Key True indicates that the search is date based. False means count based.
ComplianceSearchType	<i>Type</i> : text (max 128 characters). Key. Nullable Type of search. Matches the name of a row in the ComplianceSearchType table.

ComplianceResponsibility Table

ComplianceResponsibility links end-users to a contract with various responsibility types.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 144: Database columns for ComplianceResponsibility table

Database Column	Details
Compliance	<i>Type</i> : integer. Key. Generated ID
ResponsibilityID	A unique identifier for a record.
ResponsibilityTypeID	<i>Type</i> : integer
	The particular type of responsibility. Foreign key to the
	ResponsibilityType table.
ContractID	<i>Type</i> : integer. Key
	The contract for which this end-user has some responsibility. Foreign key to
	the Contract table.
ComplianceUserID	<i>Type</i> : integer. Key
	The end-user who has this responsibility for (or relationship to) the contract.
	Foreign key to the ComplianceUser table.
Comment	<i>Type</i> : text (max 500 characters). Nullable
	Any operator comments related to the user responsibility.

ComplianceSavedSearch Table

The ComplianceSavedSearch table holds the name of a custom view and any descriptive information about it.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceSavedSearchID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a custom view.
SearchName	<i>Type:</i> text (max 64 characters). Nullable
	The name of the custom view.
Description	<i>Type:</i> text (max 1000 characters). Nullable
	A description of the custom view.
SearchGridLayout	<i>Type:</i> text. Nullable
	The grid layout used in the custom view.
SearchSQL	<i>Type:</i> text. Nullable
	SQL statement that generates the data set for the custom view.
SearchSQLConnection	<i>Type:</i> text (max 500 characters)
	SQL connection to use to execute search SQL: 'Live', 'DataWarehouse', 'QuerySnapshot', 'ExternalFNMEA', or connection string.
SearchMapping	<i>Type:</i> XML. Nullable
	Search query XML to SQL mapping.
SearchXML	<i>Type:</i> XML. Nullable
	Search query XML.
CreatedBy	Type: text (max 128 characters)
	The operator who created the custom view.
CreationDate	<i>Type</i> : datetime
	The date the custom view was created.
ModifiedBy	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last modified the custom view.
ModificationDate	<i>Type</i> : datetime. Nullable
	The date the custom view was last modified.

Table 145: Database columns for ComplianceSavedSearch table

Database Column	Details
ComplianceSearchTypeID	<i>Type:</i> integer. Key The type of the custom view. Foreign key to the ComplianceSearchType table.
ComplianceSearchFolderID	<i>Type</i> : integer. Key The folder in which this custom view is stored. Foreign key to the ComplianceSearchFolder table.
CreatedByOperatorID	<i>Type:</i> integer. Key. Nullable ID of the operator who created the view. Foreign key to the ComplianceOperator table.
RestrictedAccessTypeID	<i>Type:</i> integer. Key Defined access type to the view. Foreign key to the RestrictedAccessType table.
CanDelete	<i>Type:</i> boolean Set this to False for predefined custom views which an operator is not allowed to delete.
CanChangeMasterObject	<i>Type</i> : boolean Set this to False if the this view has a fixed master object.
ComplianceSavedSearch SystemID	<i>Type:</i> integer. Key. Nullable An identifier for a system custom view.
SearchNameResourceName	<i>Type:</i> text (max 256 characters). Nullable The unique name of the localizable resource string representing a column name. Foreign key to the ComplianceResourceString table.
DescriptionResourceName	<i>Type:</i> text (max 256 characters). Nullable The unique name of the localizable resource string representing a column name. Foreign key to the ComplianceResourceString table.
SavedSearchLink	<i>Type:</i> text. Nullable The saved built in report or view link.
SavedSearchFilter	<i>Type:</i> text. Nullable The saved filter for report or view

ComplianceSchedule Table

ComplianceSchedule defines schedules that take place repeatedly at a specified interval.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 146: Database columns for ComplianceSchedule table

Database Column	Details
ComplianceScheduleID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for the schedule.
TermAndConditionID	<i>Type</i> : integer. Key. Nullable
	The term/condition that the schedule is associated with. Foreign key to the TermAndCondition table.
StartDate	<i>Type:</i> datetime
	The date on which this schedule first applies.
EndDate	<i>Type</i> : datetime
	The date on which this schedule ends.
RepeatIntervalTypeID	<i>Type</i> : integer. Key. Nullable
	The type of repeat interval. Foreign key to the IntervalType table.
RepeatInterval	<i>Type:</i> integer. Nullable
	The interval between repeats of this schedule.

ComplianceSearchFolder Table

The ComplianceSearchFolder table identifies a folder for storing a custom search (or view), and tracks the parent-child relationships of folders to establish their hierarchy.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 147: Database columns for ComplianceSearchFolder table

Database Column	Details
ComplianceSearchFolderID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a saved search folder.
Name	<i>Type:</i> text (max 128 characters). Key. Nullable The name of the folder.

Database Column	Details
ParentFolderID	<i>Type:</i> integer. Key. Nullable
	Identifies the parent that contains this folder. Foreign key to another folder in this ComplianceSearchFolder table.
ComplianceSearchTypeID	<i>Type:</i> integer. Key
	The kind of custom view stored in this folder. Foreign key to the ComplianceSearchType table.
Path	<i>Type:</i> text (max 128 characters). Key. Nullable
	The internal path to the folder.
PredefinedSearchesCreated	<i>Type:</i> boolean. Nullable
	Set this field to True to indicate that this folder holds generated searches.
CanDelete	<i>Type:</i> boolean. Nullable
	Set this field to False for predefined folders which operators are not
	allowed to deleted.
CreatedByOperatorID	<i>Type:</i> integer. Key. Nullable
	ID of the operator who created the view. Foreign key to the ComplianceOperator table.
RestrictedAccessTypeID	<i>Type:</i> integer. Key
	Defined access type to the view. Foreign key to the
	RestrictedAccessType table.
ComplianceSearchFolder	<i>Type:</i> integer. Key. Nullable
SystemID	An identifier for a system custom view folder.
NameResourceName	<i>Type:</i> text (max 256 characters). Key. Nullable
	The unique name of the localizable resource string representing a folder name. Foreign key to the ComplianceResourceString table.

ComplianceSearchType Table

ComplianceSearchType is a static table holding the name of the basic objects, such as an asset or license, for which custom views can be created.

Table 148: Database columns for ComplianceSearchType table

Database Column	Details
ComplianceSearchTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a type of compliance search. Possible values, together with the associated names of the object being searched, are:
	• -1 = Custom
	• 1 = Asset
	• 2 = License
	• 3 = Contract
	• 4 = Vendor
	• 5 = PurchaseOrder
	• 6 = SoftwareTitle
	• 7 = User
	• 8 = Computer
	• 13 = PurchaseOrderDetail
	• 14 = VirtualMachine
	• 15 = InstalledSoftware
	• 16 = SoftwareLicenseAllocation
	• 17 = PaymentSchedule
	• 18 = PaymentScheduleDetail
	• 19 = OracleInstance
	• 20 = OracleComponent
	• 21 = Suite
	• 22 = SuiteMember
	• 23 = TermAndCondition
	• 24 = ContractHistoryView
	• 25 = ContractDocumentView
	• 26 = DocumentNote
	• 27 = ComplianceResponsibility
	• 28 = ContractNote
	• 29 = Location

Database Column	Details
	• 30 = CostCenter
	• 31 = CorporateStructure
	• 32 = Category
	• 33 = VendorContact
	• 34 = Cluster
	• 35 = CloudServiceInstance.
TypeName	<i>Type:</i> text (max 64 characters). Key
	The name of the objects being searched.
TypeNameResourceName	<i>Type</i> : text (max 256 characters). Nullable
	The unique name of the localizable resource string representing a type name. Foreign key to the ComplianceResourceString table.
QuerySetup	<i>Type:</i> text. Nullable
	Query pre-calculation statement executed before custom view query.
QueryFilter	<i>Type:</i> text. Nullable
	Query filter template executed before custom view query.
QueryTemplate	<i>Type</i> : text. Nullable
	Query template for this search type.
IsCustom	<i>Type:</i> boolean
	False if the relation is out of the box, false otherwise.

ComplianceSearchTypeColumn Table

The ComplianceSearchTypeColumn table identifies all columns that may be used in custom views.

Database Column	Details
ComplianceSearchType	<i>Type:</i> integer. Key. Generated ID
ColumnID	A unique identifier for a custom view column.

Database Column	Details
ColumnName	<i>Type:</i> text (max 128 characters). Key
	The default value of the display column name.
ColumnNameResourceName	<i>Type:</i> text (max 256 characters). Nullable
	The unique name of the localizable resource string representing a column name. Foreign key to the ComplianceResourceString table.
QuerySetup	<i>Type:</i> text. Nullable
	Query pre-calculation statement executed before the custom view query.
FromTable	<i>Type:</i> text. Nullable
	The name of the database table where the column can be found.
SelectName	<i>Type:</i> text. Nullable
	The name of the column in the database.
JoinClause	<i>Type:</i> text. Nullable
	The SQL join that links other tables to provide the relevant data for this column.
WhereClause	<i>Type:</i> text. Nullable
	The SQL "WHERE" statement that limits the information returned by the custom view.
SelectOptionsSQL	<i>Type:</i> text. Nullable
	The SQL that selects the predefined list that the user can display when filtering on this column.
FilterGroupType	<i>Type:</i> integer. Nullable
	An ID that indicates the kind of value expected in this column, which in turn determines what kinds of filter options (such as Contains, Starts With)
	will be offered for this column. Possible values (and their associated meanings) are:
	• 1 = string
	• 2 = number
	• 3 = list
	• 4 = date
	• 5 = group
	• 6 = money
	• 7 = boolean.

Database Column	Details
DefaultFilterType	<i>Type:</i> integer. Nullable
	The type of field that should be used to search for information in this column. Possible values (and their associated meanings) are the same as for the previous field.
ComplianceSearchTypeID	<i>Type:</i> integer. Key
	The type of that the column is related to. Foreign key to the ComplianceSearchType table.
RequiresSearchTypeID	<i>Type:</i> integer. Nullable
	For special cases, a column may need data from another compliance object as well. Foreign key to the ComplianceSearchType table.
Mandatory	<i>Type:</i> boolean
	Set this field to True if this column must always be returned in the SQL "SELECT" statement.
PrimaryKey	<i>Type:</i> boolean
	Set this field to True if this column is the primary key of the SQL "SELECT" statement.
SelectByDefault	<i>Type:</i> boolean
	Set this field to True if this column should be included (checked) by default when the operator is creating a custom view. If False, the operator may include it manually.
IsCustom	<i>Type</i> : boolean
	False if the relation is out of the box, false otherwise.
LinkAction	<i>Type</i> : text (max 64 characters). Nullable
	The action to be used for the drill through link on this column.
LinkController	<i>Type:</i> text (max 64 characters). Nullable
	The controller to be used for the drill through link on this column.
LinkIndicateOrigin	<i>Type:</i> boolean
	Whether the drill through link on this column contains the report page URL as the origin URL.
LinkFragmentField	<i>Type:</i> text (max 64 characters). Nullable
	The fragment field name to be used for the drill through link on this column.
IsMultiEditEnabled	<i>Type:</i> boolean
	Whether the multiple object drill through is enabled on this object type.

Database Column

Details

MultiEditConditionField Type: text. Nullable

Field on which the multiple object drill through will be evaluated against.

ComplianceSearchTypeRelation Table

The ComplianceSearchTypeRelation table tracks relationships between different objects for which operators can create custom views.

Table 150: Database columns for	ComplianceSearchTypeRelation table
---------------------------------	------------------------------------

Database Column	Details
ComplianceSearchType	<i>Type:</i> integer. Key. Generated ID
RelationID	A unique identifier for a relationship.
RelationName	<i>Type:</i> text (max 256 characters). Key
	The unique internal name of this relation.
DescriptionResourceName	<i>Type:</i> text (max 256 characters). Nullable
	The unique name of the localizable resource string representing a
	relationship name. Foreign key to the ComplianceResourceString table.
DescriptionDefault	<i>Type:</i> text (max 256 characters)
	The default description of the relationship.
FromSearchTypeID	<i>Type:</i> integer. Key
	The ComplianceSearchType that represents the source of the relationship.
ToSearchTypeID	<i>Type:</i> integer. Key
	The ComplianceSearchType that represents the destination of the
	relationship.
ToMany	<i>Type:</i> boolean
	Set this field to True to allow more than one related row in the destination
	table for each row in the source table. If this field is False, rows have a one-
	to-one relationship.
JoinClause	<i>Type:</i> text
	The SQL join clause used to join the source object with a related object.

Database Column	Details
FilterClause	<i>Type:</i> text The SQL filter clause used to filter the source object with a related object.
IsCustom	<i>Type:</i> boolean False if the relation is out of the box, false otherwise.

ComplianceTask Table

ComplianceTask holds a collection of tasks, which are audit responsibilities generated by settings on a TermAndCondition.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 151: Database columns for ComplianceTask table

Database Column	Details
ComplianceTaskID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the task.
ComplianceScheduleID	<i>Type:</i> integer. Key. Nullable The schedule the task is associated with. Foreign key to the ComplianceSchedule table.
TaskDate	<i>Type</i> : datetime. Nullable The date for the task.

ComplianceUserPropertyValue Table

For each end-user, ComplianceUserPropertyValue stores the values for the custom properties defined in ComplianceUserTypeProperty.

Database Column	Details
ComplianceUserProperty	<i>Type</i> : integer. Key. Generated ID
ValueID	A unique identifier for the property value.
ComplianceUserType	<i>Type:</i> integer. Key
PropertyID	The property whose value is being stored. Foreign key to the ComplianceUserTypeProperty table.
ComplianceUserID	<i>Type:</i> integer. Key
	The end-user associated with this property value. Foreign key to the ComplianceUser table.
PropertyValue	<i>Type:</i> text (max 4000 characters)
	The value of the property for the specified ComplianceUser.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.

Table 152: Database columns for ComplianceUserPropertyValue table

ComplianceUserTypeProperty Table

ComplianceUserTypeProperty defines extra custom properties for all end-users.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 153: Database columns for ComplianceUserTypeProperty table

Database Column	Details
ComplianceUserType	<i>Type:</i> integer. Key. Generated ID
PropertyID	A unique identifier for the property.

Database Column	Details
PropertyName	<i>Type:</i> text (max 256 characters). Key The name of the property.
CustomPropertyDisplayX MLID	<i>Type:</i> integer. Nullable Foreign key to a record in the CustomPropertyDisplayXML table, describing how to show the property on a property dialog.

ComputerChassisType Table

ComputerChassisType is a static table listing all possible computer chassis (case) types.

Table 154: Database columns for ComputerChassisType table

Database Column	Details
ChassisTypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each ComputerChassisType. Possible values and the corresponding default strings are:
	• 1 = Other
	• 2 = Unknown
	• 3 = Desktop
	• 4 = Low Profile Desktop
	• 5 = Pizza Box
	• 6 = Mini Tower
	• 7 = Tower
	• 8 = Portable
	• 9 = Laptop
	• 10 = Notebook
	• 11 = Other Hand Held
	• 12 = Docking Station
	• 13 = All in One
	• 14 = Sub Notebook
	• 15 = Space-Saving
	• 16 = Lunch Box
	• 17 = Main System Chassis
	• 18 = Expansion Chassis
	• 19 = Sub-Chassis
	• 20 = Bus Expansion Chassis
	• 21 = Peripheral Chassis
	• 22 = Storage Chassis
	• 23 = Rack Mount Chassis
	• 24 = Sealed-Case PC.
	• 25 = Smart Phone
	• 26 = Tablet

• 26 = Tablet

Database Column	Details
WMIChassisTypeID	<i>Type</i> : integer. Nullable
	The identifier for the chassis type identified in WMI.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a computer role. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 128 characters)
	The text to display if the chassis type resource string has no translation.
IncludeInLicenseRec	<i>Type:</i> boolean
SecondUseDefault	Determines whether or not a second installation of an application on a computer of this chassis type (as well as on a primary computer assigned to the same end-user) may be counted as a legal second use under the Right of Second Use granted by some licenses. Currently, this field is used to group together chassis types that can be treated as "laptops" for this purpose.
SecondUseBitwiseValue	<i>Type:</i> integer Reserved for future use. Do not edit.

ConsolidatedLicenseUser Table

This table stores the data specific to a consolidated license user.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 155: Database columns for ConsolidatedLicenseUser table

Database Column	Details
ConsolidatedLicenseUserID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the consolidated license user.
LicenseUserID	<i>Type:</i> integer Foreign key to the LicenseUser table.
ConsolidatedGroupNumber	<i>Type:</i> integer The unique identifier showing which users are duplicates of one another.
ConsolidatedName	<i>Type:</i> text The name of the consolidated user. If consolidated by rules engine, this column stores the name of the user with the lowest LicenseUserID

Database Column	Details
ConsolidationTypeID	<i>Type:</i> integer

Foreign key to the ConsolidationType table.

ConsolidationType Table

This table stores consolidation type.

Database Column	Details
ConsolidationTypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for the consolidation type.
ResourceName	<i>Type:</i> text (max 256 characters). Key. Nullable A localizable resource string representing a consolidation type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the consolidation type resource string has no translation.

Contract Table

The Contract table contains a list of all the contracts in the system.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 157: Database columns for Contract table

Database Column	Details
ContractID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the contract.
ContractNo	<i>Type:</i> text (max 60 characters) The contract number assigned by the operator.
ContractName	<i>Type:</i> text (max 100 characters) A contract name assigned by the operator.

Database Column	Details
ContractTypeID	<i>Type:</i> integer. Key
	Identifies the type of contract. Foreign key to the ContractType table.
ContractStatusID	<i>Type:</i> integer
	Identifies the status of the contract. Foreign key to the ContractStatus table.
NeverExpires	<i>Type:</i> boolean
	If set to True, this contract never expires. If False, the contract expires at the date specified in the EndDate field.
StartDate	<i>Type:</i> datetime. Nullable
	The start date of the contract.
EndDate	<i>Type:</i> datetime. Nullable
	The end date of the contract.
PreExpiryDate	<i>Type:</i> datetime. Nullable
	The date at which a contract should be reviewed prior to its expiry date.
RenewalDate	<i>Type:</i> datetime. Nullable
	The date at which a contract is due to be renewed.
Price	<i>Type:</i> currency. Nullable
	The price of the contract.
PriceRateID	<i>Type:</i> integer. Nullable
	The currency rate to be applied to the above contract price. Foreign key to the CurrencyRate table.
PeriodTypeID	<i>Type:</i> integer. Nullable
	The frequency with which the period payments are applicable. Foreign key to the PeriodType table.
BuyoutCost	<i>Type:</i> currency. Nullable
	The buyout cost of the contract.
BuyoutCostRateID	<i>Type:</i> integer. Nullable
	The currency rate to be applied to the above buyout cost. Foreign key to the CurrencyRate table.
ManagerID	<i>Type:</i> integer. Key. Nullable
	The person who manages the contract. Foreign key to the ComplianceUser table.

Database Column	Details
Comments	<i>Type:</i> text. Nullable
	Comments recorded about the contract.
PeriodicPayment	<i>Type:</i> currency. Nullable
	The price of periodic payments associated with this contract.
PeriodicPaymentRateID	<i>Type:</i> integer. Nullable
	The currency rate to be applied to the periodic payments figure above. Foreign key to the CurrencyRate table.
VendorID	<i>Type:</i> integer. Key. Nullable
	The vendor with which the contract agreement has been made. Foreign key to the Vendor table.
MasterContractID	<i>Type:</i> integer. Key. Nullable
	The contract that is the master of this contract. Foreign key to another contract in this Contract table.
LocationID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any enterprise location associated with this contract. Foreign key to the GroupEx table.
BusinessUnitID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any enterprise corporate unit associated with this contract. Foreign key to the GroupEx table.
CostCenterID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any enterprise cost center associated with this contract. Foreign key to the GroupEx table.
CategoryID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any category used in this enterprise that is associated with this contract. Foreign key to the GroupEx table.
LicenseDowngradeEnabled	<i>Type:</i> boolean
	If this field is set to True, licenses can inherit downgrade rights from this contract. If False (the default), licenses cannot inherit downgrade rights.
LicenseDowngradeToVersion	<i>Type:</i> boolean
	If this field is set to True, any license inheriting downgrade rights from this contract can cover all previous releases (with the same edition) of the primary application. If False, licenses inheriting downgrade rights may not downgrade to earlier versions.

Database Column	Details
LicenseDowngradeToEdition	<i>Type:</i> boolean If this field is set to True, any license inheriting downgrade rights from this contract can cover all lower editions of this version of the primary application. If False, licenses inheriting downgrade rights may not downgrade to lower editions.
LicenseUpgradeEnabled	<i>Type:</i> boolean If this field is set to True, licenses can inherit upgrade rights from this contract. If False (the default), licenses cannot inherit upgrade rights.
LicenseUpgradeToVersion	<i>Type:</i> boolean If this field is set to True, any license inheriting upgrade rights from this contract can cover all later releases (with the same edition) of the primary application. If False, licenses inheriting upgrade rights may not upgrade to later versions.
LicenseUpgradeUntil ContractExpiry	<i>Type:</i> boolean If this field is set to True, any license inheriting upgrade rights from this contract can cover all later releases (with the same edition) of the primary application, as long as they were released before the expiry date (EndDate) of the contract. If False, licenses inheriting upgrade rights do not take the application release date into consideration.
GrantSecondUseToLicense	<i>Type:</i> boolean If this field is set to True, licenses can inherit the right of second use from this contract. If False (the default), licenses cannot inherit the right of second use.
SecondUsageWorkLaptop	<i>Type:</i> boolean If this field is set to True, any license inheriting from this contract will confer the right of second use on a work laptop. If False, licenses inheriting from this contract will not confer the right of second use.
SecondUsageAtHome	<i>Type:</i> boolean If this field is set to True, any license inheriting from this contract will confer the right of second use on a home computer, for the same end-user as the primary end-user of the license entitlement consumed at work. If False, licenses inheriting from this contract will not confer the right of second use on a home computer.
GrantVirtualInstallsTo License	<i>Type</i> : boolean If this field is set to True, licenses can inherit the virtual machine licensing rights from this contract. If False (the default), licenses cannot inherit virtual machine licensing rights.

Database Column	Details
CoverInstallsOnVirtual Machines	<i>Type:</i> boolean If this field is set to True, any license inheriting virtual machine rights from this contract may be used to account for installations on virtual machines. If False, licenses inheriting virtual machine rights may only account for installations on physical machines.
LimitNumberOfVirtual Installs	<i>Type:</i> boolean If this field is set to True, there is a limit to the number of virtual machine installations that may be covered by any license inheriting virtual machine rights from this contract. If this field is False, one license entitlement may cover any use on virtual machines (typically within one host computer).
NumberOfAllowedVirtual Installs	<i>Type:</i> integer. Nullable If this contracts confers the right for an inheriting license to cover installations on virtual machines, this field specifies how many installations per host are allowed before an additional license entitlement (or point) is consumed.
LimitVirtualInstalls IncludesHost	<i>Type</i> : boolean If this field is True, the host operating system installations are included in the overall count of operating systems on the host when there is a limit on the number of allowed virtual installs for each license. If False, the host operating system is not considered when determining virtual install limits.
UseHostProcessor Information	<i>Type</i> : boolean If virtual installs are allowed, this field controls whether host information is used by an inheriting license when calculating the license points consumed.
GrantLimitPointsToLicense	<i>Type:</i> boolean If this field is set to True, licenses can inherit the right of multiple use from this contract. If False (the default), licenses cannot inherit the right of multiple use.
LimitNumberOf ApplicationsEach LicensePointCovers	<i>Type:</i> boolean If this field is set to True, there is a limit, for any inheriting license, to the number of application installations allowed per license entitlement (or point). If this bit is False (the default), an inheriting license entitles you to any number of installations of software linked to this license on the one computer.
NumberOfApplication InstallsAllowedPer LicensePoint	<i>Type:</i> integer. Nullable Where the previous field is set to True, this column defines the limited number of application installations allowed per entitlement (or point).

Database Column	Details
LimitNumberOfComputers UserLicenseCanBe InstalledOn	<i>Type</i> : boolean If this field is set to True, there is a limit, for an inheriting user-based license, to the number of computers that an end-user can use per entitlement (or point) consumed. If this field is False (the default), a single end-user is entitled to install related software for his/her own use on any number of computers.
NumberOfComputers AllowedPerUserLicense Point	<i>Type:</i> integer. Nullable Where the previous field is set to True, this column defines the limited number of application installations an end-user is allowed per entitlement (or point).
InitialPlatformQuantity	<i>Type:</i> integer. Nullable The number of desktops covered by the Microsoft Enterprise Agreement platform license at the start of the agreement.
PurchaseProgramID	<i>Type:</i> integer. Nullable Identifies the purchase program of contract. Foreign key to the PurchaseProgram table.
MSSelectApplication LevelID	<i>Type:</i> integer. Nullable Identifies the Microsoft Select level for applications. Foreign key to the MSSelectLevel table.
MSSelectSystemLevelID	<i>Type:</i> integer. Nullable Identifies the Microsoft Select level for systems. Foreign key to the MSSelectLevel table.
MSSelectServerLevelID	<i>Type:</i> integer. Nullable Identifies the Microsoft Select level for servers. Foreign key to the MSSelectLevel table.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable The operator who created the record.
CreationDate	<i>Type</i> : datetime The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable The date the record was last updated.
TotalValue	<i>Type</i> : currency. Nullable The total value of the contract.

Database Column	Details
TotalValueRateID	<i>Type:</i> integer. Nullable
	The rate for the total value. Foreign key to the CurrencyRate table.
MonthlyValue	<i>Type:</i> currency. Nullable
	The cost of the contract per month.
MonthlyValueRateID	<i>Type:</i> integer. Nullable
	The rate for the monthly cost. Foreign key to the CurrencyRate table.
ProjectID	<i>Type:</i> integer. Key. Nullable
	A project for the Contract. Foreign key to the Project table.
SecurityTypeID	<i>Type:</i> integer. Nullable
	The type of security to use when determining which operators have access
	to the contract. Foreign key to the SecurityType table.
PreviousContractID	<i>Type:</i> integer. Key. Nullable
	A link to a contract that this contract has replaced. Foreign key to the Contract table.
ContractStateID	<i>Type:</i> integer. Nullable
	The state of the contract. Foreign key to the ContractState table.
LastRenewedDate	<i>Type:</i> datetime. Nullable
	The date when the contract was last renewed.
LicenseConsumptionEnabled	<i>Type:</i> boolean
	If this field is set to True, licenses can inherit consumption rules from this
	contract. If False (the default), licenses cannot inherit consumption rules.
LicenseMobilityEnabled	<i>Type:</i> boolean
	If this field is set to True, licenses can inherit mobility rights from this
	contract. If False (the default), licenses cannot inherit mobility rights.
ProcessorLimitsEnabled	<i>Type:</i> boolean
	If this field is set to True, licenses can inherit rights related to processor limits from this contract. If False (the default), licenses cannot inherit rigts related to processor limits.

ContractNote Table

ContractNote stores a list of notes attached to a contract.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 158: Database columns for ContractNote table

Database Column	Details
ContractNoteID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for the contract note.
ContractID	<i>Type</i> : integer. Key
	The contract that the note is for. Foreign key to the Contract table.
ShortDescription	<i>Type</i> : text (max 100 characters)
	In the user interface, this maps to the contract reference to which the note relates.
LongDescription	<i>Type</i> : text. Nullable
	The content of the note.
CreationUser	<i>Type</i> : text (max 128 characters)
	The operator who created the note.
CreationDate	<i>Type</i> : datetime
	The date of creation of the note.
UpdatedUser	<i>Type</i> : text (max 128 characters)
	The operator who last updated the note.
UpdatedDate	<i>Type</i> : datetime
	The date of the last update to the note.

ContractNotification Table

ContractNotification lists the notifications that need to be sent for a contract.

Table 159: Database columns for ContractNotification table

Database Column	Details
ContractNotificationID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the contract notification.
ContractID	<i>Type:</i> integer. Key The contract this record is associated with. Foreign key to the Contract table.
NotificationInterval	<i>Type:</i> integer Defines how long before the contract notification is sent.
NotificationInterval TypeID	<i>Type:</i> integer Defines the interval type used to work out how long before a contract notification is sent. Foreign key to the IntervalType table.
NotificationTypeID	<i>Type:</i> integer. Key Defines the type of notification (contract renewal or contract expiry). Foreign key to the NotificationType table.

ContractNotificationResponsibility Table

ContractNotificationResponsibility keeps track of which responsibility groups need to be notified for contract expiry or renewals.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ContractNotification ResponsibilityID	<i>Type</i> : integer. Key. Generated ID Unique identifier for contract notification responsibility groups.
ContractID	<i>Type</i> : integer. Key The contract generating notifications. Foreign key to the Contract table.
ResponsibilityTypeID	<i>Type:</i> integer. Key The responsibility type of the end-users receiving notifications about the contract. Foreign key to the ResponsibilityType table.

Table 160: Database columns for ContractNotificationResponsibility table

Database Column	Details
NotificationTypeID	<i>Type</i> : integer. Key

The type of notification (renewal or expiry) that these responsibility groups should receive notifications for. Foreign key to the NotificationType table.

ContractProperty Table

ContractProperty defines extra custom properties for contracts of a specified type.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 161: Database columns for ContractProperty table

Database Column	Details
ContractPropertyID	<i>Type:</i> integer. Key. Generated ID Unique identifier for a contract property.
ContractTypeID	<i>Type:</i> integer. Key The type of contract to which this property may apply. Foreign key to the ContractType table.
PropertyName	<i>Type:</i> text (max 256 characters). Key The name of the custom property. A unique identifier for a resource string. Foreign key to the ComplianceResourceString table.
CustomPropertyDisplayX MLID	<i>Type:</i> integer. Nullable Reference to a record in the CustomPropertyDisplayXML table, describing how to show the property on a property dialog.

ContractPropertyValue Table

For each contract, ContractPropertyValue stores the values for the custom properties defined in ContractProperty.

Table 162: Database columns for ContractPropertyValue table

Database Column	Details
ContractPropertyValueID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a property value.
ContractID	<i>Type</i> : integer. Key
	The individual contract to which this value applies. Foreign key to the Contract table.
ContractPropertyID	<i>Type:</i> integer. Key
	The property that contains this value. The contract should have the same type as the type associated with this property. Foreign key to the ContractProperty table.
PropertyValue	<i>Type:</i> text (max 4000 characters)
	The property value.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type</i> : datetime
	The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.

ContractScopingData Table

ContractScoping links contracts to the enterprise groups to which they apply. Exactly one of GroupExID and CategoryID must be non-NULL.

Database Column	Details
ContractID	<i>Type:</i> integer. Key
	The contract the scoping applies to. Foreign key to the Contract table.

Database Column	Details
GroupExID	<i>Type</i> : text (max 128 characters). Key. Nullable The enterprise group that the scoping applies to. Foreign key to the GroupEx table.
CategoryID	<i>Type</i> : text (max 128 characters). Key. Nullable The category that the scoping applies to. Foreign key to the Category table.

ContractSecurityUser Table

ContractSecurityUser stores a list of permissions granted to an operator for a contract with Restricted security.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 164: Database columns for ContractSecurityUser table

Database Column	Details
ContractID	<i>Type</i> : integer. Key
	The contract with Restricted security. Foreign key to the Contract table.
ActionClassID	<i>Type:</i> integer. Key
	The type of permission being granted to the operator. Foreign key to the ActionClass table.
ComplianceOperatorID	<i>Type:</i> integer. Key
	The operator that the permission is granted to. Foreign key to the
	ComplianceOperator table.

ContractState Table

ContractState holds the different states a contract can be in.

Table 165: Database columns for ContractState table

Database Column	Details
ContractStateID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each ContractState. Possible values and the corresponding default strings are:
	 1 = Draft 2 = Suspended
	 3 = Active
	• 4 = Archived
	• 5 = Cancelled
	 6 = Expired 7 = Completed.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a contract state. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the state resource string has no translation.

ContractStatus Table

ContractStatus is a static table listing all contract status values in the system.

Table 166: Database columns for ContractStatus table

Database Column	Details
ContractStatusID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for each ContractStatus. Possible values and the corresponding default strings are:
	• 1 = Active
	• 2 = Archived
	• 3 = Draft
	• 4 = Suspended
	• 5 = Cancelled
	• 6 = Expired
	• 7 = Completed.
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a contract status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the status resource string has no translation.

ContractType Table

ContractType is a static table listing all contract types in the system.

Table 167: Database columns for ContractType table

Database Column	Details
ContractTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each ContractType. Possible values and the corresponding default strings are:
	• 1 = General
	• 2 = Lease
	• 3 = Hardware Maintenance and Support
	• 4 = Software License
	• 5 = Software Maintenance and Support
	• 6 = Blanket purchase
	• 7 = Consulting services
	• 8 = Insurance
	• 9 = Rent
	• 10 = Subscription
	• 11 = Microsoft Business and Services Agreement
	• 12 = Microsoft Select License Agreement
	• 13 = Microsoft Select Plus Agreement
	• 14 = Microsoft Select License Enrollment
	• 15 = Microsoft Select Plus Affiliate
	• 16 = Microsoft Enterprise Agreement
	• 17 = Microsoft Enterprise Subscription Agreement.
ContractTypeResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a contract type. Foreign key to the ComplianceResourceString table.
ContractTypeDefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.
XMLFile	<i>Type:</i> text. Nullable
	The layout of the property dialog for this type of computer, stored in XML format.

Database Column Details	
PathResourceName	<i>Type:</i> text (max 256 characters)
	The unique name of the localizable resource string representing the parent contract type under which this contract type should be displayed. Foreign key to the ComplianceResourceString table.
PathDefaultValue	<i>Type:</i> text (max 256 characters)
	The default parent contract type text to display if the resource string has no translation.
PurchaseProgramID	<i>Type:</i> integer. Nullable
	The default purchase program for this contract type.
CanCreate	<i>Type:</i> boolean
	Whether the end-user can manually create contracts of this type.

ContractUseRight Table

ContractUseRight contains licensing rules most of which can be set by PURL.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 168: Database columns for ContractUseRight table

Database Column Details	
ContractUseRightID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier
ContractID	<i>Type</i> : integer. Key
	A unique identifier for a contract.
ReassignmentTimeLimit	<i>Type</i> : boolean
AppliesDevice	If 1 then the license cannot be reassigned for some period of time (example is Microsoft 90 day rule)
ReassignmentTimeLimit <i>Type</i> : boolean	
AppliesUser	If 1 then the license cannot be reassigned for some period of time (example is Microsoft 90 day rule)
ReassignmentTimeLimit	<i>Type</i> : integer. Nullable
Device The period (in days) within which the license cannot be reassigned	

Database Column Details	
ReassignmentTimeLimitUser	<i>Type:</i> integer. Nullable
	The period (in days) within which the license cannot be reassigned
LicenseMobilityApplies	<i>Type:</i> boolean
	1 if eligible for bringing your own license to cloud environment
NumberOfOSEPerLicense	<i>Type:</i> integer. Nullable
	Number of OSE per license
NumberOfProcessorsPerOSE	<i>Type:</i> integer. Nullable
	Number of processors per OSE
TotalNumberOfCoresPerV Type: integer. Nullable	
MPerLicense Total number of cores per VM per license	
NumberOfCoresPerSocket	<i>Type:</i> integer. Nullable
Number of cores per socket	
ThirdPartyAccessAllowed	<i>Type:</i> boolean
Access to applications is allowed to third party users. This field to True	
AllowExternalRoamingUse	<i>Type:</i> boolean. Nullable
	Set this field to True if license allows external roaming use. This field is
	defaulted to False. This is applicable for both device and user licenses and
	is related to virtual application access. If 1, this license will consume 1 entitlement per each user. If 0, this license will consume 1 license per each
	user device. And, if NULL, ignore virtual application access. This can be used
	in conjunction with VirtualApplicationAccessMaximumUsagePeriod.
MeasurementDate	<i>Type:</i> datetime. Nullable
	The date of the license measurment.
ConsumptionUnit	<i>Type:</i> text. Nullable
	Unit description to describe the consumption amount.
TargetOperatingSystem	<i>Type:</i> integer
Type ID Type of Operating Systems to target	
VirtualApplication	<i>Type:</i> integer. Nullable
AccessMaximumUsage PeriodDevice	This is a rule for virtual application access. This is used in conjunction with the AllowExternalRoamingUse. For Device licenses, a license will consume 1 entitlement per each user device when used in period specified here.

Database Column	Details
VirtualApplication	<i>Type:</i> integer. Nullable
AccessMaximumUsage PeriodUser	This is a rule for virtual application access. This is used in conjunction with the AllowExternalRoamingUse. For user licenses, if 1, this license will consume only when used in period specified here.
AlwaysInstalled	<i>Type:</i> boolean
	If this field is True, this license is considered in to be used whenever it is allocated. If False, software usage is considered separately, and allocation merely defines the corporation's modelling of who is expected to consume entitlements.
MinimumNumberOf	<i>Type:</i> integer
LicensesPerVM	When licensing a Virtual Hardware System with a MSServerCore license
	(LicenseTypeID = 33), consume license entitlements as though the virtual machine had at least this number of virtual threads.
AllowIBMPVUSubCapacity	<i>Type</i> : boolean
FromNonILMT If the license does not use host processor information (not full ca this field to True to allow non-ILMT sub-capacity PVU consumpt calculations to be used.	
NumberOfAllowed	<i>Type:</i> integer. Nullable
ProcessorsPerHost	This field specifies how many processors per host are allowed before an additional license entitlement (or point) is consumed. Null provides the default of 1. Zero provides unlimited.
MinimumNumberOfProcessors	<i>Type:</i> integer
	The minimum number of processors that this license is for. This field is only used where the SoftwareLicenseType is MSServerProcessor (LicenseTypeID = 22).

ContractUseRightIBM Table

ContractUseRightIBM contains IBM licensing rules most of which can be set by PURL.

Table 169: Database columns for ContractUseRightIBM table

Database Column	Details
ContractUseRightIBMID	<i>Type:</i> integer. Key. Generated ID A unique identifier
ContractID	<i>Type:</i> integer. Key A unique identifier for a contract.
PVULimitApplies	<i>Type</i> : boolean If 1 then PVU limits apply
PVULimit	<i>Type</i> : integer. Nullable PVU limit

ContractVendor Table

ContractVendor stores the links between vendors and contracts.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 170: Database columns for ContractVendor table

Database Column	Details
ContractVendorID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the link.
ContractID	<i>Type:</i> integer. Key The contract that the vendor is linked to. Foreign key to the Contract table.
VendorID	<i>Type:</i> integer. Key. Nullable The vendor that the contract is linked to. Foreign key to the Vendor table.
ThirdParty	<i>Type:</i> boolean Set this field to True if this vendor is third-party.

CurrencyRate Table

CurrencyRate stores the exchange rates assigned to any currency.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 171: Database columns for CurrencyRate table

Database Column	Details
CurrencyRateID	<i>Type:</i> integer. Key. Generated ID
	Unique identifier for each record.
SnapshotID	<i>Type:</i> integer. Key
	Snapshot associated with this exchange rate. Foreign key to the
	CurrencyRateSnapshot table.
CurrencyID	<i>Type:</i> integer. Key
	Currency associated with this exchange rate. Foreign key to the Currency
	table.
Rate	<i>Type:</i> decimal
	Exchange rate assigned to the currency for the selected snapshot.
UpdatedUser	<i>Type:</i> text (max 256 characters). Nullable
	Operator who last modified the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	Date that the record was last modified.

CurrencyRateSnapshot Table

Each record in CurrencyRateSnapshot represents a single currency snapshot.

Database Column	Details
CurrencyRateSnapshotID	<i>Type:</i> integer. Key. Generated ID Unique identifier for this record.
SnapshotName	<i>Type:</i> text (max 256 characters) Name of the currency snapshot.

Database Column	Details
SnapshotResourceID	<i>Type</i> : text (max 64 characters). Nullable The resource string containing the name of the snapshot to display on the user interface.
SnapshotDate	<i>Type:</i> datetime. Nullable Start date of the currency snapshot.
SnapshotReference CurrencyID	<i>Type:</i> integer. Nullable Reference currency used for this snapshot. Foreign key to the Currency table.
IsStandardRateSnapshot	<i>Type:</i> boolean. Key Set to True if this is the default standard rate snapshot, which is created for each FNMP installation.
UpdatedUser	<i>Type</i> : text (max 256 characters). Nullable Operator who last modified this record.
UpdatedDate	<i>Type</i> : datetime. Nullable Date this record was last modified.

CustomPropertyDisplayXML Table

CustomPropertyDisplayXML stores XML snippets with layout information for custom properties. The XML snippets in this table will be inserted into the default XML layout for the appropriate property dialog. Storing snippets in this table, rather than manually updating the default XML layout, ensures that custom properties will continue to be applied even after upgrading the product (since during a product upgrade, we typically overwrite all property display XML layout with the new defaults for that version of the product).

Database Column	Details
CustomPropertyDisplayX MLID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this XML snippet.
XMLSnippet	<i>Type:</i> text An XML snippet that describes how to show this property in the properties dialog.
InsertXPath	<i>Type:</i> text XPath which selects an XML node where the snippet will be inserted.

Table 173: Database columns for CustomPropertyDisplayXML table

Database Column	Details
XMLInsertTypeID	<i>Type:</i> integer How to insert this property at the selected XPath node. Foreign key to the XMLInsertType table.
InsertOrder	<i>Type:</i> integer The order in which to insert the XML snippet for this property into the XML
	layout file. If this value is higher than another, it will be inserted after it. Useful when the XML snippet for this property is to be inserted inside another - for instance, if a property creates a tab or group.

DisplayXML Table

The static DisplayXML table stores the default XML code representing the property dialog layout for non-typespecific objects such as purchase orders, vendors and evidence. The XML files for type-specific entities (such as assets) are stored in the static type tables (such as AssetType) for those objects.

Table 174: Da	itabase colum	nns for Disp	layXML table
---------------	---------------	--------------	--------------

Database Column	Details
XMLType	<i>Type:</i> text (max 30 characters). Key A unique identifier for the type of object associated with the XML. Possible values are:
	 Contract (not in use any longer - the contract XML files are now stored in ContractType)
	Vendor
	VendorContact
	PurchaseOrder
	PurchaseOrderDetail
	SoftwareTitle
	FileEvidence
	InstallerEvidence
	• User
	TermAndCondition
	• Operator
	LicensePointsRuleSet.

Database Column	Details
XMLFile	<i>Type</i> : text. Nullable The layout of the property dialog for this type of entity, stored in XML format.

Document Table

The Document table stores details of documents or files relating to assets, contracts, purchase orders, licenses and terms and conditions.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 175: Database columns for Document table

Database Column	Details
DocumentID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the document.
DocumentTypeID	<i>Type:</i> integer
	The way that the document is stored and referenced. Foreign key to the DocumentType table.
DocumentName	<i>Type:</i> text (max 500 characters)
	The name of the document.
DocumentFile	<i>Type:</i> image. Nullable
	The binary data for the document (if it is stored in the FlexNet Manager Suite database).
OpenWith	<i>Type:</i> text (max 500 characters). Nullable
	The program to attempt to open the document with.
DocumentDescription	<i>Type:</i> text (max 3000 characters)
	A description of the document.
PhysicalLocation	<i>Type:</i> text (max 500 characters). Nullable
	Physical location of a (possibly hard) copy of this document. NOTE: for
	compatibility with the FlexNet Manager Suite console, when the document
	type is 3 (Reference), the DocumentName column should be used instead, and this field set to null.

Database Column	Details
DocumentSize	<i>Type</i> : integer. Nullable
	Document size in bytes.
ContentType	<i>Type:</i> text (max 256 characters). Nullable
	The MIME-type of the document file.
AssetID	<i>Type</i> : integer. Key. Nullable
	The asset to which this document may be linked. Foreign key to the Asset table.
PurchaseOrderID	<i>Type</i> : integer. Key. Nullable
	The purchase order to which the document may be linked. Foreign key to the PurchaseOrder table.
PurchaseOrderDetailID	<i>Type</i> : integer. Key. Nullable
	The purchase order detail (or PO line) to which the document may be linked. Foreign key to the PurchaseOrderDetail table.
ContractID	<i>Type:</i> integer. Key. Nullable
	The contract to which the document may be linked. Foreign key to the Contract table.
SoftwareLicenseID	<i>Type:</i> integer. Nullable
	The license to which the document may be linked. Foreign key to the SoftwareLicense table.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	The end-user to which the document may be linked. Foreign key to the ComplianceUser table.
AttachDate	<i>Type:</i> datetime
	The date and time this document was linked.
UserName	<i>Type</i> : text (max 256 characters)
	Operator who created the link between this document and the other object.
DocumentNoteID	<i>Type</i> : integer. Key. Nullable
	The note to which this document may be linked. Foreign key to the DocumentNote table.
ContractNoteID	<i>Type</i> : integer. Key. Nullable
	The contract note to which this document may be linked. Foreign key to the ContractNote table.

Database Column	Details
TermAndConditionID	<i>Type:</i> integer. Key. Nullable
	The term/condition to which this document may be linked. Foreign key to the TermAndCondition table.
SecurityTypeID	<i>Type:</i> integer. Key. Nullable
	Security type for this document (role-based or individual access). Foreign key to the SecurityType table.
FileType	<i>Type:</i> text (max 20 characters). Nullable
	The type of the file that has been uploaded, if any. This is used to provide full-text indexing.
ComplianceOperatorID	<i>Type</i> : integer. Nullable
	The end-operator to which the documnet may be linked. Foreign key to the
	ComplianceOperator table.
IsOracleLMS	<i>Type</i> : boolean
	If set to True, this field indicates that this document is relating to Oracle
	LMS. If False, then the document is not relating to Oracle LMS.

DocumentHistory Table

The DocumentHistory table stores history of documents or files relating to assets, contracts, purchase orders, licenses, and terms and conditions.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 176: Database columns for DocumentHistory table

Database Column	Details
DocumentHistoryID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the document history.
DocumentID	<i>Type:</i> integer. Key The corresponding document. Foreign key to the Document table.
DocumentTypeID	<i>Type:</i> integer The way that the document is stored and referenced. Foreign key to the DocumentType table.

Database Column	Details
DocumentName	<i>Type:</i> text (max 500 characters)
	The name of the document.
DocumentFile	<i>Type:</i> image. Nullable
	The binary data for the document (if it is stored in the FlexNet Manager Suite database).
OpenWith	<i>Type:</i> text (max 500 characters). Nullable
	The program to attempt to open the document with.
DocumentDescription	<i>Type:</i> text (max 3000 characters)
	A description of the document.
PhysicalLocation	<i>Type:</i> text (max 500 characters). Nullable
	Physical location of a (possibly hard) copy of this document. NOTE: for compatibility with the FlexNet Manager Suite console, when the document type is 3 (Reference), the DocumentName column should be used instead, and this field set to null.
DocumentSize	<i>Type</i> : integer. Nullable
	Document size in bytes.
ContentType	<i>Type:</i> text (max 256 characters). Nullable
	The MIME-type of the document file.
UserName	<i>Type:</i> text (max 256 characters)
	Operator who created the link between this document and the other object.
AttachDate	<i>Type:</i> datetime
	The date and time this document was linked to the other object.
FileType	<i>Type:</i> text (max 20 characters). Nullable
	The type of the file that has been uploaded, if any. This is used to provide full-text indexing.

DocumentNote Table

DocumentNote stores a list of notes attached to a document. The document itself is attached to a contract.

Table 177: Database columns for DocumentNote table

Database Column	Details
DocumentNoteID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the document note.
DocumentID	<i>Type:</i> integer
	The document that the note is for. Foreign key to the Document table.
ShortDescription	<i>Type:</i> text (max 100 characters)
	In the user interface, this maps to the document reference to which the note relates.
LongDescription	<i>Type:</i> text. Nullable
	The content of the note.
CreationUser	<i>Type:</i> text (max 128 characters)
	The operator who created the note.
CreationDate	<i>Type:</i> datetime
	The date of creation of the note.
UpdatedUser	<i>Type:</i> text (max 128 characters)
	The operator who last updated the note.
UpdatedDate	<i>Type:</i> datetime
	The date of the last update to the note.

DocumentType Table

DocumentType is a static value listing the alternative ways that a document can be saved in the database.

Database Column	Details
DocumentTypeID	 <i>Type:</i> integer. Key. Generated ID A unique identifier for each DocumentType. Possible values and the corresponding default strings are: 1 = Document upload 2 = File location 3 = Physical location 4 = URL.

Database Column	Details
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing a document type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters) The text to display if the type resource string has no translation.

Event Table

The Event table stores errors and events processed by the beacon, devices, rules etc.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 179: Database columns for Event table

Database Column	Details
EventID	<i>Type</i> : integer. Key. Generated ID Synthetic key for this table.
ActivityID	<i>Type:</i> integer. Key Foreign key to the Activity table.
EventUID	<i>Type:</i> unique identifier. Key UID to uniquely identify the event.
EventTypeID	<i>Type:</i> integer. Key Foreign key to the EventType table.
CreationDate	<i>Type</i> : datetime Date and time (UTC) when the Event was created.
SessionUID	<i>Type</i> : unique identifier. Key. Nullable UID to uniquely identify the the session.

EventLogCategory Table

The EventLogCategory table holds the different categories of events created by the system.

Table 180: Database columns for EventLogCategory table

Database Column	Details
EventLogCategoryID	 <i>Type</i>: integer. Key. Generated ID A unique identifier for each EventLogCategory. Possible values and the corresponding default strings are: 1 = Email Notification.
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a event category. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) A description of the event category.

EventLogDetail Table

The EventLogDetail table holds details of the events created by the system.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 181: Database columns for EventLogDetail table

Database Column	Details
EventLogDetailID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for an event detail.
EventLogSummaryID	<i>Type:</i> integer. Key
	The unique identifier for an event. Foreign key to the EventLogSummary
	table.
EventLogLevelID	<i>Type:</i> integer. Key
	The level of event. Foreign key to the EventLogLevel table.
MessageTime	<i>Type</i> : datetime. Key
	The time that the event was raised.
Message	<i>Type</i> : text (max 256 characters)
	The brief event message.

Database Column	Details
Details	<i>Type:</i> text. Nullable The full event message.
ParentEventLogDetailID	<i>Type:</i> integer. Key. Nullable The parent event log detail. Foreign key to another event log detail in this same EventLogDetail table.

EventLogLevel Table

The EventLogLevel table holds the different levels of events created by the system.

Table 182: Database columns for	or EventLogLevel table
---------------------------------	------------------------

Database Column	Details
EventLogLevelID	 <i>Type</i>: integer. Key. Generated ID A unique identifier for each EventLogLevel. Possible values and the corresponding default strings are: 1 = Information 2 = Warning 3 = Error. 4 = Performance.
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing an event level. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) A description of the event level.

EventLogStatus Table

The EventLogStatus table holds the different statuses of events created by the system.

Table 183: Database columns for EventLogStatus table

Database Column	Details
EventLogStatusID	 Type: integer. Key. Generated ID A unique identifier for each EventLogStatus. Possible values and the corresponding default strings are: 1 = In Progress 2 = Success 3 = Failed.
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing an event status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters) A description of the event status.

EventLogSummary Table

The EventLogSummary table holds the top level summary of events created by the system.

Table 184: Database columns	for EventLogSummary table
-------------------------------------	---------------------------

Database Column	Details
EventLogSummaryID	<i>Type</i> : integer. Key. Generated ID A unique identifier for an event.
StartTime	<i>Type:</i> datetime. Key The time that the event started.
EndTime	<i>Type:</i> datetime. Key. Nullable The time that the event finished.
EventLogCategoryID	<i>Type</i> : integer. Key The category of event. Foregin key to the EventLogCategory table.
EventName	<i>Type</i> : text (max 128 characters) Brief description of the event.
EventLogStatusID	<i>Type</i> : integer. Key The status of the event. Foreign key to the EventLogStatus table.

EventParameter Table

The EventParameter table stores the links between Activities and EventParameterTypes.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 185: Database columns for EventParameter table

Database Column	Details		
EventParameterID	<i>Type:</i> integer. Key. Generated ID Primary key for the EventParameter table		
EventID	<i>Type</i> : integer. Key A link to the Event table		
EventParameterTypeID	<i>Type</i> : integer A link the the EventParameterType table. this value specifies which kind of object the EventParameter is linked to.		
Value	<i>Type</i> : text stores the value of this parameter.		

EventParameterType Table

The EventParameterType table stores details about the different types of Event Parameters.

Database Column	Details		
EventParameterTypeID	<i>Type:</i> integer. Key. Generated ID Synthetic key for this table.		
EventParameterTypeName	<i>Type:</i> text (max 256 characters). Key A short piece of text representing the Event Parameter. Internal use only- not to be displayed to the operator.		
IsResourceString	<i>Type:</i> boolean A short piece of text representing the Event Parameter. Internal use only- not to be displayed to the operator.		

EventSeverity Table

EventSeverity is a static table listing all of the severity levels that an event type can have.

Table 187: Database colum	nns for EventSeverity table
---------------------------	-----------------------------

Database Column	Details
EventSeverityID	<i>Type</i> : integer. Key. Generated ID
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing the EventSeverity record. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the state resource string has no translation.

EventTarget Table

The EventTarget table stores the links between Activities and other tables in the database.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 188: Database columns for EventTarget table

Database Column	Details		
EventID	<i>Type:</i> integer. Key		
	Link to the Event table		
TargetTypeID	<i>Type:</i> integer. Key		
	A link to the $TargetType$ table. this value specifies which kind of object the		
	Event is linked to.		
TargetUID	<i>Type</i> : unique identifier. Key. Nullable		
	used to attach the Event to its target. The target table depends on the		
	TargetTypeID of the linked EventType.		
TargetID	<i>Type:</i> integer. Nullable		
	ID of the target. Referenced if the UID is not available.		
TargetName	<i>Type:</i> text (max 128 characters). Nullable		
	TargetName used to record the name of the target. Can be used when the		
	UID or ID is not available.		

EventType Table

The EventType table stores details about the different types of Events.

Table 189: Databas	se columns for	EventType table
--------------------	----------------	-----------------

Database Column	Details		
EventTypeID	<i>Type:</i> integer. Key. Generated ID		
	Synthetic key for this table.		
EventTypeName	<i>Type:</i> text (max 256 characters). Key		
	Short text representing the Event Type. Internal use only- not to be displayed to the operator.		
EventSeverityID	<i>Type</i> : integer		
	The severity of the Event. $1 = information$, $2 = warning$, $3 = error$, $4 = critical$.		
EventMessageResource	<i>Type:</i> text (max 256 characters)		
	A resource name used to look up a description for this Event		
EventTypeStatusID	<i>Type</i> : integer. Key		
	Foreign key to the EventTypeStatus table		
ActivityTypeID	<i>Type:</i> integer. Key		
	Foreign key to the ActivityType table		

EventTypeStatus Table

The EventTypeStatus table stores progress stages for different processes.

Table 190: D	Database	columns	for	EventT	ypeStatus	table
--------------	----------	---------	-----	--------	-----------	-------

Database Column	Details
EventTypeStatusID	<i>Type:</i> integer. Key. Generated ID Auto-generated status ID
EventTypeStatus	<i>Type:</i> text (max 255 characters). Key
ResourceName	Status name resource name
EventTypeStatusDefault	<i>Type:</i> text (max 255 characters). Nullable
Value	Default value for status

ILMTPVUCounts Table

This table allows the summarised PVU sub capacity numbers to be imported from ImportedILMTPVUCounts.".

Table 191:	Database	columns for	ILMTPVUCounts	table
------------	----------	-------------	---------------	-------

Database Column	Details
ILMTPVUCountsTableID	<i>Type:</i> integer. Key. Generated ID
	The ID of the ILMTPVUCounts Table
ComplianceComputerID	<i>Type:</i> integer. Key
	ID from the ComplianceComputer table.
TitleName	<i>Type:</i> text (max 512 characters). Key
	The name of the title these points apply to.
Publisher	<i>Type:</i> text (max 254 characters). Key
	The name of the publisher of the title these points apply to.
SubCapacityCores	<i>Type:</i> integer
	The number of sub-capacity licensable cores for the license on the computer.
FullCapacityCores	<i>Type:</i> integer
	The number of full-capacity licensable cores for the license on the computer.
SubCapacityPVU	<i>Type</i> : integer
	The number of sub-capacity PVU counts consumed for the license on the computer.
FullCapacityPVU	<i>Type:</i> integer
	The number of full-capacity PVU counts consumed for the license on the computer.
PeakSubCapacityPVU	<i>Type:</i> integer
	The peak number of sub-capacity PVU counts consumed for the license on the computer.
PeakFullCapacityPVU	<i>Type:</i> integer
	The peak number of full-capacity PVU counts consumed for the license on the computer.

ImportResolverErrorResult Table

The ImportResolverErrorResult table stores all resolver error message

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ImportResolverError ResultID	<i>Type:</i> integer. Key. Generated ID Auto-generated ID for ImportResolverErrorResult table
FileName	<i>Type:</i> text (max 255 characters) Name of the file
DateCreated	<i>Type:</i> datetime Date time where file was resolved.
ErrorMessage	<i>Type:</i> text. Nullable error message
ImportResolverTypeID	<i>Type:</i> integer. Key Foreign key to the ImportResolverType table

ImportResolverType Table

The ImportResolverType table stores all the resolver types.

Table 193:	Database	columns for	ImportReso	lverType table
	Database	conditinity for	Impor creso	The rype cable

Database Column	Details
ImportResolverTypeID	<i>Type:</i> integer. Key. Generated ID Auto-generated ID for ImportResolverType table
ImportResolverTypeName	<i>Type:</i> text (max 255 characters). Key Name of the resolver
ImportResolverType Resource	<i>Type</i> : text (max 256 characters) A resource name used to look up a description for this resolver type

InstalledSoftwareAttribute Table

InstalledSoftwareAttribute stores the attribute values for each installation of an application. Reserved for future expansion.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
InstalledSoftwareID	<i>Type:</i> integer. Key The installation whose attribute value is being stored. Foreign key to the InstalledSoftware table.
AttributeID	<i>Type:</i> integer. Key The attribute whose value is being stored. Foreign key to the Attribute table.
Value	<i>Type:</i> text (max 400 characters) The value of this attribute of the installed application.

Table 194: Database columns for InstalledSoftwareAttribute table

Instance Table

Instance stores information about database instances.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 195: Database columns for Instance table

Database Column	Details
InstanceID	<i>Type</i> : integer. Key. Generated ID A unique identifier for an instance.
ParentInstanceID	<i>Type</i> : integer. Key. Nullable The parent of the instance. Foreign key to another instance in the Instance table.

<i>Type:</i> integer. Key. Nullable
The Oracle Enterprise Manager database that manages this Oracle instance
The Oracle Enterprise Manager database that manages this Oracle instance. Foreign key to the Instance table.
<i>Type:</i> integer. Key. Nullable
The installation associated with the instance. Foreign key to the InstalledSoftware table.
<i>Type:</i> integer
The type of this database instance. Foreign key to the InstanceType table
<i>Type:</i> integer. Key
The host server running this database instance. Foreign key to the ComplianceComputer table.
<i>Type:</i> integer. Key
The instance's application. Foreign key to the SoftwareTitle table
<i>Type:</i> text (max 256 characters). Key. Nullable
The name of the database instance.
<i>Type:</i> text (max 256 characters). Nullable
The serial number of the database instance.
<i>Type</i> : text (max 512 characters). Nullable
The installation path of the database instance.
<i>Type</i> : text (max 512 characters). Nullable
The business application that uses the database instance.
<i>Type:</i> boolean
Set this to False if this instance does not require a license. The default is
True, which means a license is required.
<i>Type</i> : boolean
Set this to True if this instance should be included in license reconciliation.
False means that this instance will not be accounted for in license reconciliation.
<i>Type:</i> boolean
When a computer does not return any inventory for a specified period of
time, it may be deleted. Set this field to True to ensure that the instance record does not get deleted when there is no inventory.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable
	The software license covering this instance. Foreign key to the SoftwareLicense table.
UsedInInventory	<i>Type</i> : boolean
	If the inventory importer detects that this database instance instance is used, it will set thie field to True.
UsedOverride	<i>Type:</i> boolean. Nullable
	An operator may manually specify whether this database instance is to be considered used (set this field to True), or not (set this field to False). This overrides the importer result (UsedInInventory) described above.
InventorySourceTypeID	<i>Type:</i> integer
	Whether this instance has ever been reported in inventory, or has been manually created and maintained. Foreign key to the ComplianceComputerInventorySourceType table.
AuditEvidence	<i>Type:</i> binary. Nullable
	Oracle LMS CVS files in zip archive.
AuditEvidenceDate	<i>Type:</i> datetime. Nullable
	Date and time the Oracle LMS audit evidence was collected by Flexera Inventory Manager
CreationUser	<i>Type</i> : text (max 256 characters)
	The operator who created the database instance record.
CreationDate	<i>Type:</i> datetime
	The date and time when this instance record was created.
UpdatedUser	<i>Type:</i> text (max 256 characters). Nullable
	The operator who most recently updated the database instance record.
UpdatedDate	<i>Type</i> : datetime
	The date and time when this instance record was last updated.

InstanceAttribute Table

InstanceAttribute stores the attribute values for each installed database instance.

Table 196: Database columns for InstanceAttribute table

Database Column	Details
InstanceID	<i>Type:</i> integer. Key The database instance whose attribute value is being stored. Foreign key to the Instance table.
AttributeID	<i>Type:</i> integer. Key The attribute whose value is being stored. Foreign key to the Attribute table.
Value	<i>Type:</i> text (max 400 characters) The value of this attribute of the database instance.

InstanceEnvironment Table

InstanceEnvironment is a static table listing the possible environments in which database instances may be deployed. For some vendors, the environment affects the costs of licensing the database instance.

Database Column	Details
InstanceEnvironmentID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for an InstanceEnvironment. Possible values and the corresponding default names are:
	• 1 = Development
	• 2 = Test
	• 3 = Staging
	• 4 = Production
	• 5 = Other.
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an instance environment. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the environment resource string has no translation.

InstancePropertyValue Table

For each instance, InstancePropertyValue stores the values for the custom properties defined in InstanceTypeProperty.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
InstancePropertyValueID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a property value.
InstanceID	<i>Type:</i> integer. Key
	The instance associated with this property. Foreign key to the Instance table.
InstanceTypePropertyID	<i>Type:</i> integer. Key
	The property whose value is being stored. The type of the instance should match the type that the property is associated with. Foreign key to the InstanceTypeProperty table.
PropertyValue	<i>Type:</i> text (max 4000 characters)
	The value of the property.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type</i> : datetime
	The date and time when the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date and time when the record was last updated.

Table 198: Database columns for InstancePropertyValue table

InstanceRole Table

InstanceRole is a static thale listing the possible roles of database instances. For some vendors, the role of the database instance affects the costs of licensing.

Table 199: Database columns for InstanceRole table

Database Column	Details
InstanceRoleID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for an InstanceRole. Possible values and the corresponding default names are:
	• 1 = None
	• 2 = Backup
	• 3 = Failover
	• 4 = Mirroring
	• 5 = Standby
	• 6 = Other
	• 7 = Primary.
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an instance role. Foreign key to the ComplianceResourceString table.
DefaultValue	Type: text (max 100 characters)
	The text to display if the role resource string has no translation.

InstanceTenancy Table

The InstanceTenancy table contains the Cloud Service providers tenancy for the instance.

Table 200:	Database	columns	for	InstanceTenance	/ table
------------	----------	---------	-----	-----------------	---------

Database Column	Details	
InstanceTenancyID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each InstanceTenancy. Possible values and the corresponding default strings are: • 1 = Default (the instance is running in a VPC)	
	 2 = Dedicated (the instance is running on a single-tenant hardware). 3 = Host (the instance is running in a single host affinity mode). 	
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing a virtual machine source type. Foreign key to the ComplianceResourceString table.	

Database Column	Details
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the source type resource string has no translation.
ImporterString	<i>Type:</i> text (max 100 characters) This is the string which is coming from the data source.

InstanceType Table

InstanceType is a static table listing the possible types of database instance.

Table 201: Database	columns for	<pre>InstanceType table</pre>
---------------------	-------------	-------------------------------

Database Column	Details
InstanceTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for an InstanceType. Possible values and the corresponding default names are:
	 1 = General (for non-Oracle applications)
	• 2 = Oracle
	 3 = Application (for instances created for non-Oracle applications manually flagged as Oracle).
	• 4 = Oracle EBS Server
	• 5 = Oracle EBS Module
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an instance type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters)
	The text to display if the instance type resource string has no translation.
XMLFile	<i>Type:</i> text. Nullable
	The layout of the property dialog for this type of instance, stored in XML format.

InstanceTypeProperty Table

InstanceTypeProperty defines extra custom properties for instances of the specified type.

Table 202: Database columns for InstanceTypeProperty table

Database Column	Details
InstanceTypePropertyID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each property.
PropertyName	<i>Type:</i> text (max 256 characters). Key The name of the property.
InstanceTypeID	<i>Type:</i> integer. Key Foreign key to the InstanceType table.
CustomPropertyDisplayX MLID	<i>Type:</i> integer. Nullable Foreign key to a record in the CustomPropertyDisplayXML table, describing how to show the property on a property dialog.

InstanceUser Table

InstanceUser links end-users in LicenseUser with a particular instance of a database for license counting purposes.

Table 203: Databas	e columns for	InstanceUser table
--------------------	---------------	--------------------

Database Column	Details
InstanceID	<i>Type</i> : integer. Key
	The instance used by the end-user. Foreign key to a database instance in the Instance table.
LicenseUserID	<i>Type</i> : integer. Key
	The end-user using the instance. Foreign key to the account name in the LicenseUser table.
Quantity	<i>Type</i> : integer
	The number of actual end-users of the database instance logging in to the
	Oracle database through this account. For example, if there is one "Shop
	Floor" account for all fork lift drivers, this field stores the number of
	individual drivers that must be accounted for.
AccountStatus	<i>Type:</i> text (max 256 characters). Nullable
	The current status of the end-user account.

Database Column	Details	
CreationDate	<i>Type:</i> datetime. Nullable	
	Date and time when the end-user was created.	
LastLogonDate	<i>Type:</i> datetime. Nullable	
	Date and time when the end-user last logged on.	
DefaultTablespace	<i>Type:</i> text (max 256 characters). Nullable	
	The default tablespace for an Oracle user.	
TempTablespace	<i>Type:</i> text (max 256 characters). Nullable	
	The temporary tablespace for an Oracle user.	
IsManualUser	<i>Type:</i> boolean	
	Whether or not the user was created manually (or through Oracle).	

IntervalType Table

IntervalType stroes the types of interval used by schedules and by terms and conditions.

Database Column	Details	
IntervalTypeID	<i>Type:</i> integer. Key. Generated ID	
	A unique identifier for each IntervalType. Possible values and the	
	corresponding default strings are:	
	• 1 = Day	
	• 2 = Week	
	• 3 = Month.	
ResourceName	<i>Type</i> : text (max 256 characters). Key	
	The unique name of the localizable resource string representing an interval	
	type. Foreign key to the ComplianceResourceString table.	
DefaultValue	<i>Type:</i> text (max 100 characters)	
	The text to display if the type resource string has no translation.	

LicenseUser Table

The LicenseUser table lists account names (for end-users and other resources) that have been extracted from other products (such as Oracle databases). These external accounts cannot be reconciled with the end-users listed in the ComplianceUser table. Nevertheless, these accounts can be very important for licensing costs.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 205: Database columns for LicenseUser table

Database Column	Details			
LicenseUserID	<i>Type:</i> integer. Key. Generated ID A unique identifier for an external end-user.			
LicenseUserLogin	<i>Type</i> : text (max 400 characters). Key The user login extracted from the original listing (for example, from an Oracle database).			
Description	<i>Type:</i> text (max 400 characters) The description is usually a group name.			
EmployeeNumber	<i>Type:</i> text (max 256 characters). Nullable The employee number of the external end-user.			
FirstName	<i>Type:</i> text (max 256 characters). Nullable The first name of the end-user extracted from the original listing.			
LastName	<i>Type:</i> text (max 256 characters). Nullable The last name of the end-user extracted from the original listing.			
Email	<i>Type:</i> text (max 400 characters). Nullable The email of the end-user extracted from the original listing.			
SAPClientCode	<i>Type:</i> text (max 2 characters). Nullable The end-user's SAP client code, where applicable.			
SAPInstallationNumber	<i>Type:</i> text (max 10 characters). Nullable The end-user's SAP installation number, where applicable.			
CostCenter	<i>Type:</i> text (max 128 characters). Nullable The SAP cost center that the end-user belongs to			
LicenseUserTypeID	<i>Type:</i> integer The type of external end-user. Foreign key to the LicenseUserType table.			

LicenseUserConnection Table

ComplianceUserConnection stores a link between external end-users in LicenseUser which have been reported in inventory, and external IDs which can be used to identify them in their inventory sources. End-users reported in multiple inventory sources will appear multiple times in this table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 206: Database columns for LicenseUserConnection table

Database Column	Details
LicenseUserID	<i>Type:</i> integer. Key A unique identifier for the external end-user. Foreign key to the LicenseUser table.
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The inventory source where the end-user was reported. Foreign key to the ComplianceConnection table.
ExternalID	<i>Type:</i> big integer. Key A (hopefully unique) identifier for the end-user in the external inventory source.

LicenseUserExcluded Table

Similarly to the LicenseUser table, LicenseUserExcluded lists account names extracted from other products (such as Oracle databases); but these accounts are to be excluded from license counts. The accounts are listed in full here since it is possible that they do not already appear in the LicenseUser table. Any that do appear in both tables, matched on the login names, are excluded from license counts.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 207: Database columns for LicenseUserExcluded table

Database Column	Details
LicenseUserExcludedID	<i>Type:</i> integer. Key. Generated ID A unique identifier for an excluded end-user.
LicenseUserLogin	<i>Type:</i> text (max 400 characters). Key The user login extracted from the original listing (for example, from an Oracle database). For the account to be excluded from license counts, this must exactly match a LicenseUserLogin from the LicenseUser table.

Database Column	Details
DefaultQuantity	<i>Type</i> : integer The number of actual users of the database instance logging in through this account. For example, a "SYSTEM" account may allow for a number of administrators to log in. In this table, the default quantity is zero. If this field is non-zero and the end-user matches a LicenseUser record, then in some cases, we may exclude this number of end-users from license counting, but include any further accounts covered by the LicenseUser record.

LicenseUserType Table

LicenseUserType is a static table listing possible types of external end-users (in the LicenseUser table).

Database Column	Details
LicenseUserTypeID	 <i>Type:</i> integer. Key. Generated ID A unique identifier for each LicenseUserType. Possible values and the corresponding default strings are: 1 = Default 2 = Developer.
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing an external end-user type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

LogFile Table

The LogFile table stores all the log file

Table 209: Database columns for LogFile table

Database Column	Details
LogFileID	<i>Type:</i> integer. Key. Generated ID Primary key of the table LogFile
SessionUID	<i>Type:</i> unique identifier. Key Identified of the file
TaskStepID	<i>Type:</i> integer. Key. Nullable Foreign key to the TaskStep table
FileContent	<i>Type</i> : image holds the log file content
FileExtension	<i>Type:</i> text (max 10 characters) Extension of the file

MSEAARLSoftwareTitleEdition Table

MSEAARLSoftwareTitleEdition contains a list of available product editions for a Microsoft Enterprise Agreement.

 Table 210: Database columns for MSEAARLSoftwareTitleEdition table

Database Column	Details
SoftwareRecognitionID	<i>Type</i> : text (max 32 characters). Key The factory unique ID (an MD5 digest) for the product edition in the Application Recognition Library.
IsPlatform	<i>Type:</i> boolean Whether this edition should be covered by the platform license.

MSSelectLevel Table

MSSelectLevel is a static table listing all Microsoft Select price levels.

Database Column	Details
MSSelectLevelID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each MSSelectLevel. Possible values and the corresponding default strings are:
	• 1 = A
	• 2 = B
	• 3 = C
	• 4 = D
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a price level. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 16 characters)
	The text to display if the price level resource string has no translation.
NumberOfPoints	<i>Type:</i> integer
	The umber of points that must be purchased to achieve the price level.

Table 211: Database columns for MSSelectLevel table

MSSelectPool Table

MSSelectPool is a static table listing all Microsoft Select pools.

Table 212: Database	e columns	for MSSelectPool	table
---------------------	-----------	------------------	-------

Database Column	Details
MSSelectPoolID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each MSSelectPool. Possible values and the corresponding default strings are:
	• 1 = Applications
	• 2 = Systems
	• 3 = Servers
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a pool. Foreign key to the ComplianceResourceString table.

Database Column	Details
DefaultValue	<i>Type:</i> text (max 64 characters)
	The text to display if the pool resource string has no translation.

MobileDevice Table

MobileDevice extends the ComplianceComputer table to store mobile device related property values.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 213: Database columns for MobileDevice table

Database Column	Details
MobileDeviceID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for a MobileDevice Column use to specify clustered index.
ComplianceComputerID	<i>Type</i> : integer. Key
	A unique identifier for a MobileDevice. Foreign key to the
	ComplianceComputer table.
IMEI	<i>Type</i> : text (max 256 characters). Nullable
	IMEI value of the mobile device.
PhoneNo	<i>Type</i> : text (max 128 characters). Nullable
	Phone number of the mobile device.
EmailAddress	<i>Type</i> : text (max 256 characters). Nullable
	The stmp email account associated to a mobile device when the device is connected to ActiveSync.

NotificationItem Table

NotificationItem lists notifications that were sent to end-users.

Table 214: Database columns for NotificationItem table

Database Column	Details
NotificationItemID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for this notification.
NotificationTypeID	<i>Type:</i> integer. Key
	The type of notification to be sent. Foreign key to the NotificationType table.
NotificationDate	<i>Type:</i> datetime. Key
	The date the notification should be sent.
TaskID	<i>Type:</i> integer. Key. Nullable
	The task the notification is for, if any. Foreign key to the
	TermAndConditionTask table.
ContractID	<i>Type:</i> integer. Key. Nullable
	The contract the notification is for, if any. Foreign key to the Contract table.
ComplianceUserID	<i>Type</i> : integer. Key
	The end-user that is receiving the notification. Foreign key to the ComplianceUser table.
SentDate	<i>Type:</i> datetime. Key. Nullable
	The date the notification was actually sent.

NotificationTemplate Table

NotificationTemplate stores a list of email templates used to generate notification emails.

Table 215: Database columns for NotificationTemplate table

Database Column	Details
NotificationTemplateID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each NotificationTemplate. The default templates provided are:
	 -1 = Contract expiry notification template -2 = Contract renewal notification template -3 = Task due notification template
	 -4 = Task reminder notification template -5 = Task escalation notification template.
FileName	<i>Type:</i> text (max 255 characters). Key The template's file name.
Content	<i>Type:</i> text. Nullable The template content.

NotificationType Table

NotificationType stores a list of notification types that can be sent to end-users.

Database Column	Details
NotificationTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each NotificationType. Possible values and the corresponding default strings are:
	 1 = Contract Expiry (a notification sent to end-users responsible for a contract when it is due to expire)
	• 2 = Contract Renewal (a notification sent to end-users responsible for a contract when it is due for renewal)
	• 3 = Task Due (a notification sent to the end-user assigned to a task when it is due for completion)
	 4 = Task Reminder (a notification sent to the end-user assigned to a task as a reminder that the task is nearing completion)
	• 5 = Task Escalation (a notification sent to the end-user assigned to receive escalations, typically when a task is not completed on time).

Database Column	Details
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a notification type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.
NotificationTemplateID	<i>Type:</i> integer. Key. Nullable The template to use when sending notifications of this type. Foreign key to the NotificationTemplate table.

OperatorManageState Table

The OperatorManageState table lists the possible states for managing who has responsibility for maintaining certain business data. This is for internal use.

Database Column	Details
OperatorManageStateID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the operator management state of business data.
Name	<i>Type:</i> text (max 64 characters). Key
	A unique name for the state
DescriptionResourceName	<i>Type:</i> text (max 256 characters). Nullable
	The unique name of the localizable resource string representing the description of the state. Foreign key to the ComplianceResourceString table.
DescriptionDefaultValue	<i>Type</i> : text (max 256 characters)
	A string representing the default name of the state. Foreign key to the
	ComplianceResourceString table.
IsLocked	<i>Type</i> : boolean
	Is the data locked from edits by an operator.
IsModified	<i>Type:</i> boolean
	Is the data modified by an operator.
IsFactory	<i>Type:</i> boolean
	Is the data from the Reference ARL factory.

 Table 217: Database columns for OperatorManageState table

Database Column	Details
AutoUpdate	<i>Type:</i> boolean Is the data to be updated automatically.
Priority	<i>Type:</i> integer Is the data locked from edits by an operator.

OperatorTaskTypeSetting Table

The OperatorTaskTypeSetting table stores data related to background task type.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 218: Database columns for OperatorTaskTypeSetting table

Database Column	Details
OperatorTaskTypeSettingID	<i>Type:</i> integer. Key. Generated ID Auto-generated operator task type setting ID
ComplianceOperatorID	<i>Type:</i> integer. Key Foreign key to the ComplianceOperator table
ActivityTypeID	<i>Type:</i> integer. Key Foreign key to the ActivityType table
Enabled	<i>Type</i> : boolean Enabled flag for a setting

OracleInstance Table

OracleInstance stores key characteristics specific to instances of Oracle databases which may impact the cost of licensing.

Table 219: Database columns for OracleInstance table

Database Column	Details
InstanceID	<i>Type</i> : integer. Key The database instance whose attributes are being stored. Foreign key to the Instance table.
InstanceEnvironmentID	<i>Type</i> : integer The environment of the database instance. Foreign key to the InstanceEnvironment table.
InstanceRoleID	<i>Type:</i> integer The role of the database instance. Foreign key to the InstanceRole table.

PaymentSchedule Table

PaymentSchedule contains details of the payment schedules managed by FlexNet Manager Suite.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 220: Database columns for PaymentSchedule table

Database Column	Details
PaymentScheduleID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a payment schedule.
ContractID	<i>Type:</i> integer. Key
	Identifies a contract to which this payment schedule applies. Foreign key to the Contract table.
PaymentScheduleTypeID	<i>Type:</i> integer
	Identifies the type of this payment schedule. Foreign key to the PaymentScheduleType table.
PaymentScheduleTermID	<i>Type:</i> integer
	Identifies the term of payment for this payment schedule. Foreign key to the PaymentScheduleTerm table.
PaymentScheduleCategoryID	<i>Type:</i> integer
	Identifies the category of this payment schedule. Foreign key to the
	PaymentScheduleCategory table.

Database Column	Details
Description	<i>Type</i> : text (max 100 characters)
	Name of this payment schedule.
StartDate	<i>Type</i> : datetime
	The date on which this payment schedule starts.
EndDate	<i>Type</i> : datetime. Nullable
	The date on which this payment schedule ends.
PeriodTypeID	<i>Type</i> : integer
	Identifies the period type of this payment schedule. Foreign key to the PeriodType table.
IncludeNewAssetsAnd	<i>Type</i> : boolean
Licenses	If this field is set to True, then when a new asset or license is linked to the contract associated with this payment schedule, the item will also be linked to this payment schedule. If False, new items linked to the related contract are not automatically linked to the payment schedule (although a manual link can still be made).
LeaseTerminationDate	<i>Type:</i> datetime. Nullable
	The termination date of this payment schedule's lease. Only applicable if the payment schedule type is Lease.
LeaseTerminationReason	<i>Type</i> : text (max 100 characters). Nullable
	The reason this payment schedule's lease was terminated. Only applicable if the payment schedule type is Lease.
LeaseNumber	<i>Type:</i> text (max 150 characters). Nullable
	The number of this payment schedule's lease. Only applicable if the payment schedule type is Lease.
BuyoutCost	<i>Type:</i> currency. Nullable
	The buyout cost for this payment schedule's lease. Only applicable if the payment schedule type is Lease.
BuyoutCostRateID	<i>Type:</i> integer. Nullable
	Identifies the currency rate to be applied to this payment schedule's lease buyout cost. Only applicable if the payment schedule type is Lease. Foreign
	key to the CurrencyRate table.
PreviousPurchases	<i>Type</i> : integer. Nullable
	In the case of a Microsoft Enterprise Agreement renewal, the number of desktops covered by the associated platform license at the end of the previous Microsoft EA.

Database Column	Details
Comment	<i>Type:</i> text. Nullable
	Operator's comments about this payment schedule.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the payment schedule was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator to make the last change to this record.
UpdatedDate	<i>Type:</i> datetime
	The date the last change was made to this payment schedule record.

PaymentScheduleCategory Table

PaymentScheduleCategory is a static table listing categories that can be assigned to a payment schedule.

Table 221: Database columns for PaymentScheduleCategory table

Database Column	Details
PaymentScheduleCategoryID	 Type: integer. Key. Generated ID A unique identifier for each PaymentScheduleCategory. Possible values and the corresponding default strings are: 1 = Fixed 2 = License true up 3 = Per hardware item 4 = Per license quantity.
ResourceString	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a payment schedule category. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the category resource string has no translation.

PaymentScheduleDetail Table

PaymentScheduleDetail lists all individual periods of a payment schedule.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 222: Database columns for PaymentScheduleDetail table

Database Column	Details
PaymentScheduleDetailID	<i>Type</i> : integer. Key. Generated ID
	Uniquely identifies this payment schedule period.
PaymentScheduleID	<i>Type</i> : integer. Key
	Identifies the payment schedule to which this period applies. Foreign key to the PaymentSchedule table.
PeriodCovered	<i>Type:</i> text (max 50 characters)
	A string describing the period to which this payment schedule period is applicable. This is a calculated field.
PeriodStartDate	<i>Type</i> : datetime. Key
	The date on which this payment schedule period starts.
PeriodEndDate	<i>Type</i> : datetime
	The date on which this payment schedule period ends.
DueDate	<i>Type</i> : datetime. Key. Nullable
	The date on which this payment is due.
PaymentScheduleDetail	<i>Type</i> : integer. Key
PaymentStatusID	Identifies the state type of this payment schedule.The default value 2
	corresponds to an Incomplete status. Foreign key to the PaymentScheduleDetailPaymentStatus table.
PaymentDate	<i>Type</i> : datetime. Nullable Records the date the payment was made.
ActualAmount	<i>Type</i> : currency. Nullable
	The actual amount paid in this payment schedule period.
ActualAmountRateID	<i>Type:</i> integer. Nullable
	Identifies the currency rate to be applied to the amount paid in this payment schedule period. Foreign key to the CurrencyRate table.
EstimatedAmount	<i>Type</i> : currency. Nullable
	The estimated amount for this payment schedule period.

Database Column	Details
EstimatedAmountRateID	<i>Type:</i> integer. Nullable
	Identifies the currency rate to be applied to the estimated amount for this payment schedule period. Foreign key to the CurrencyRate table.
BudgetedAmount	<i>Type:</i> currency. Nullable
	The budgeted amount for this payment schedule period.
BudgetedAmountRateID	<i>Type:</i> integer. Nullable
	Identifies the currency rate to be applied to the budgeted amount for this payment schedule period. Foreign key to the CurrencyRate table.
Obligated	<i>Type:</i> boolean
	If this field is set to True, the payee is obligated to pay during this payment schedule period. If this bit is False (the default), payment can presumably be deferred.
Quantity	<i>Type:</i> integer. Nullable
	The quantity for this payment schedule period.
UnitPrice	<i>Type:</i> currency. Nullable
	The unit price for this payment schedule period.
UnitPriceRateID	<i>Type:</i> integer. Nullable
	Identifies the currency rate to be applied to the unit price for this payment schedule period. Foreign key to the CurrencyRate table.
SoftwareAssuranceUnit	<i>Type:</i> currency. Nullable
Price	The unit price for support (Software Assurance) for this payment schedule period.
SoftwareAssuranceUnit	<i>Type:</i> integer. Nullable
PriceRateID	Identifies the currency rate to be applied to the unit price for support in this payment schedule period. Foreign key to the CurrencyRate table.
Notes	<i>Type:</i> text. Nullable
	The notes field.
PeriodCoveredResourceName	<i>Type:</i> text (max 256 characters). Nullable
	The resource name used to describe the period to which this payment schedule period is applicable.
PeriodCoveredResource	<i>Type:</i> text (max 256 characters). Nullable
Parameters	The parameters used by the resource name used to describe the period to which this payment schedule period is applicable.

PaymentScheduleDetailPaymentStatus Table

PaymentScheduleDetailPaymentStatus is a static table listing the possible status values for payment schedules.

Database Column	Details
PaymentScheduleDetail	<i>Type:</i> integer. Key. Generated ID
PaymentStatusID	A unique identifier for each PaymentScheduleDetailPaymentStatus.
	Possible values and the corresponding default strings are:
	• 1 = Complete
	• 2 = Incomplete
	• 3 = Not going to pay.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a payment
	schedule status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters)
	The text to display if the status resource string has no translation.

PaymentScheduleTerm Table

PaymentScheduleTerm is a static table listing possible payment schedule terms (the timing of payments in relation to each payment period).

Table 224: Database columns for PaymentScheduleTer	m table
--	---------

Database Column	Details
PaymentScheduleTermID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each PaymentScheduleTerm. Possible values and the corresponding default strings are:
	• 1 = Pre-paid
	• 2 = At the end of each period
	• 3 = At the beginning of each period.
ResourceString	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a payment schedule term. Foreign key to the ComplianceResourceString table.

|--|

DefaultValue

Type: text (max 100 characters)

The text to display if the term resource string has no translation.

PaymentScheduleType Table

PaymentScheduleType is a static table listing possible payment schedule types.

Table 225: Database columns for PaymentScheduleType table

Database Column	Details
PaymentScheduleTypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each PaymentScheduleType. Possible values and the corresponding default strings are: • 1 = General
	 2 = Lease
	 3 = Hardware maintenance and support
	• 4 = Software license
	 5 = Software maintenance and support
	• 6 = Consulting services
	• 7 = Insurance
	• 8 = Rent
	• 9 = Subscription
	• 10 = EA professional platform
	• 11 = EA other application.
ResourceString	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a payment schedule type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.
XMLFile	<i>Type</i> : text. Nullable
	The layout of the property dialog for this type of payment schedule, stored in XML format.

Project Table

Details about each Project.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 226: Database columns for Project table

Database Column	Details
ProjectID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the project.
ProjectName	<i>Type</i> : text (max 100 characters). Key
	The name of the project.
Comments	<i>Type:</i> text. Nullable
	Comments recorded about the project.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
UpdatedUser	<i>Type</i> : text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type</i> : datetime. Nullable
	The date the record was last updated.

PurchaseOrder Table

The PurchaseOrder table contains a list of all the purchase orders in the system.

Table 227: Database columns for PurchaseOrder table

Database Column	Details
PurchaseOrderID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the purchase order.
PurchaseOrderNo	<i>Type:</i> text (max 50 characters). Key
	The purchase order number.
ShortDescription	<i>Type:</i> text (max 250 characters). Nullable
	A short description of the purchase order.
PurchaseOrderDate	<i>Type:</i> datetime
	The date recorded for the purchase order.
PurchaseOrderStatusID	<i>Type:</i> integer. Nullable
	The current state of the purchase order. Foreign key to the PurchaseOrderStatus table. The default value of 1 links to a "New" status.
PurchaseOrderTypeID	<i>Type:</i> integer. Nullable
	The type of the purchase order. Foreign key to the PurchaseOrderType table.
InvoiceNo	<i>Type:</i> text (max 50 characters). Nullable
	The invoice number that relates to the purchase order.
InvoiceDate	<i>Type:</i> datetime. Nullable
	The date on the invoice that relates to the purchase order.
TotalPrice	<i>Type:</i> currency. Nullable
	The total price of the purchase order.
TotalPriceRateID	<i>Type:</i> integer. Nullable
	The currency rate to be applied to this purchase order. Foreign key to the CurrencyRate table.
ShippingAndHandling	<i>Type:</i> currency. Nullable
	The amount of money spent on shipping and handling.
ShippingAndHandlingRateID	<i>Type:</i> integer. Nullable
	The currency rate to be applied to the shipping and handling costs related to this purchase order. Foreign key to the CurrencyRate table.
SalesTax	<i>Type</i> : currency. Nullable
	The amount of sales tax paid as part of this purchase order.

Database Column	Details
SalesTaxRateID	<i>Type:</i> integer. Nullable
	The currency rate to be applied to the sales tax related to this purchase order. Foreign key to the CurrencyRate table.
AutoCalculateCostFrom	<i>Type:</i> boolean
Children	The default value of True indicates that the total price, shipping, and sales tax values should be calculated from the purchase order lines that are children of this purchase order. A value of False means that these values are manually inserted into this purchase order header.
ShippingMethodID	<i>Type:</i> integer. Nullable
	The type shipping used to deliver the product. Foreign key to the ShippingMethod table.
ShippingLocationID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The location to which the ordered material is shipped. Foreign key to the GroupEx table.
ShippingDate	<i>Type:</i> datetime. Nullable
	The date the ordered material was shipped.
RequestNo	<i>Type:</i> text (max 60 characters). Nullable
	The request number for the purchase order.
RequestDate	<i>Type:</i> datetime. Nullable
	The date the purchase order was requested.
RequestedByID	<i>Type:</i> integer. Key. Nullable
	The person who requested the purchase order. Foreign key to the ComplianceUser table.
AuthorizedByID	<i>Type:</i> integer. Key. Nullable
	The person who authorized the purchase order. Foreign key to the ComplianceUser table.
ProcessedByID	<i>Type:</i> integer. Key. Nullable
	The person who processed the purchase order. Foreign key to the ComplianceUser table.
Comments	<i>Type:</i> text. Nullable
	Comments recorded about the purchase order.
VendorID	<i>Type:</i> integer. Key. Nullable

Database Column	Details
ContractID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the Contract table, identifying any existing contract related
	to this purchase order.
LocationID	Type: text (max 128 characters). Key. Nullable
	Any enterprise location associated with this purchase order. Foreign key to
	the GroupEx table.
BusinessUnitID	<i>Type</i> : text (max 128 characters). Key. Nullable
	Any corporate unit in the enterprise associated with this purchase order.
	Foreign key to the GroupEx table.
CostCenterID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any cost center in the enterprise associated with this purchase order.
	Foreign key to the GroupEx table.
CategoryID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any enterprise category associated with this purchase order. Foreign key to
	the GroupEx table.
CreationUser	Type: text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
UpdatedUser	Type: text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.

PurchaseOrderDetail Table

The PurchaseOrderDetail table contains a list of all the individual purchase order lines in the system.

Table 228: Database columns for PurchaseOrderDetail table

Database Column	Details
PurchaseOrderDetailID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the purchase order line.
PurchaseOrderID	<i>Type:</i> integer. Key
	The parent purchase order to which this line belongs. Foreign key to the PurchaseOrder table.
PurchaseOrderDetail	<i>Type:</i> integer. Nullable
ParentID	When a purchase order line is nested as a child of another, this link identifies the parent. Foreign key to another purchase order line in this PurchaseOrderDetail table.
ItemDescription	<i>Type:</i> text (max 250 characters)
	A description of the item ordered in this PO line.
SequenceNumber	<i>Type:</i> integer. Key
	The sequence number of the PO line in the overall purchase order.
PartNo	<i>Type:</i> text (max 100 characters). Nullable
	Deprecated, use LicensePartNo.
Quantity	<i>Type:</i> integer. Nullable
	The quantity of items purchased in this PO line.
QuantityPerUnit	<i>Type</i> : integer. Nullable
	Where the purchase order refers to software licenses, this is the quantity of license included in per unit of this purchase order.
EffectiveQuantity	<i>Type:</i> integer. Nullable
	The license entitlemets brought in by this purchase. If the total for this column would exceed the maximum allowable for int, then the total will be reduced to this number.
LicenseQuantity	<i>Type:</i> integer. Nullable
	Where the purchase order refers to software licenses, this is the number of license entitlements conferred by the item ordered in this line. This is distinct from the purchase quantity on the line item. For example, it would be possible to order "Qty 50 of XYZ license 10-pack", which would mean a Quantity field of 50 and a LicenseQuantity of 500.
LicensePartNo	<i>Type:</i> text (max 100 characters). Key. Nullable
	The part number or SKU of the item ordered in this PO line.
UnitPrice	<i>Type:</i> currency. Nullable
	The unit price of items ordered on this PO line.

Database Column	Details
UnitPriceRateID	<i>Type</i> : integer. Nullable The currency rate to be applied to the above unit price. Foreign key to the CurrencyRate table.
SalesTax	<i>Type:</i> currency. Nullable The amount of sales tax paid on this PO line item. May be left null if sales tax is only entered on the purchase order header.
SalesTaxRateID	<i>Type:</i> integer. Nullable The currency rate to be applied to the above sales tax. Foreign key to the CurrencyRate table.
TotalPrice	<i>Type:</i> currency. Nullable The total price of items in this PO line.
TotalPriceRateID	<i>Type:</i> integer. Nullable The currency rate to be applied to the above total price. Foreign key to the CurrencyRate table.
AutoCalculateTotal	<i>Type</i> : boolean Set this field to True (the default) for the total price to be caclulated automatically as (UnitPrice * Quantity) + ShippingAndHandling + SalesTax. If False, the operator must enter the total manually.
ShippingAndHandling	<i>Type:</i> currency. Nullable The amount of money spent on shipping and handling.
ShippingAndHandlingRateID	<i>Type:</i> integer. Nullable The currency rate to be applied to the above shipping and handling costs. Foreign key to the CurrencyRate table.
InheritPOContractID	<i>Type:</i> boolean. Key A bit which, if set to 1 (the default), means that the following contract ID is inherited from the parent purchase order.
ContractID	<i>Type:</i> integer. Key. Nullable A link to a contract related to this PO line. Foreign key to the Contract table.
InheritPOShippingDetails	<i>Type</i> : boolean Set this field to True (the default) for the following shipping details to be inherited from the parent purchase order. If False, an operator has to complete the following details manually.
ShippingDate	<i>Type:</i> datetime. Nullable The date the product was shipped.

Database Column	Details
ShippingMethodID	<i>Type:</i> integer. Nullable The delivery method used to deliver the item ordered in this PO line. Foreign key to the ShippingMethod table.
ShippingLocationID	<i>Type:</i> text (max 128 characters). Key. Nullable The location to which the item is shipped. Foreign key to the GroupEx table.
MaintenanceOrService Agreement	<i>Type:</i> boolean Set this field to True when this PO line includes maintenance or another type of service agreement. If False (the default), there is no maintenance or ofther service agreement associated with this PO line.
EffectiveDate	<i>Type</i> : datetime. Nullable The effective date for the Purchase Order Line.
ExpiryDate	<i>Type:</i> datetime. Nullable The expiry date for the Purchase Order Line.
InheritPOEnterpriseGroups	<i>Type:</i> boolean Set this field to True (the default) for the following enterprise groups to be inherited from the parent purchase order. If False, an operator has to complete the following details manually.
LocationID	<i>Type:</i> text (max 128 characters). Key. Nullable Any enterprise location associated with this PO line. Foreign key to the GroupEx table.
BusinessUnitID	<i>Type:</i> text (max 128 characters). Key. Nullable Any corporate unit within the enterprise associated with this PO line. Foreign key to the GroupEx table.
CostCenterID	<i>Type:</i> text (max 128 characters). Key. Nullable Any enterprise cost center associated with this PO line. Foreign key to the GroupEx table.
CategoryID	<i>Type:</i> text (max 128 characters). Key. Nullable Any category used within the enterprise associated with this PO line. Foreign key to the GroupEx table.
InheritPOProcessDetails	<i>Type</i> : boolean Set this field to True (the default) for the following process details to be inherited from the parent purchase order. If False, an operator has to complete the following details manually.
RequestNo	<i>Type:</i> text (max 60 characters). Nullable The request number for the PO line.

Database Column	Details
RequestDate	<i>Type:</i> datetime. Nullable
	The date the related product was requested.
RequestedByID	<i>Type:</i> integer. Key. Nullable
	The person who requested the purchase order line. Foreign key to the
	ComplianceUser table.
AuthorizedByID	<i>Type</i> : integer. Key. Nullable
	The person who authorized the purchase order line. Foreign key to the ComplianceUser table.
ProcessedByID	<i>Type</i> : integer. Key. Nullable
	The person who processed the purchase order line. Foreign key to the
	ComplianceUser table.
Comments	<i>Type:</i> text. Nullable
	Comments recorded about the purchase order line.
InheritPOInvoiceDetails	<i>Type</i> : boolean
	Set this field to True (the default) for the following invoicing details to be
	inherited from the parent purchase order. If False, an operator has to
	complete the following details manually.
InvoiceNo	<i>Type</i> : text (max 50 characters). Nullable
	The invoice number relating to this PO line.
InvoiceDate	<i>Type:</i> datetime. Nullable
	The invoice date for the purchase order line.
OrderedProduct	<i>Type:</i> text (max 256 characters). Nullable
	A description of the item ordered in this PO line.
CreationUser	<i>Type</i> : text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type</i> : datetime
	The date the record was created.
UpdatedUser	<i>Type</i> : text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type</i> : datetime. Nullable
	The date the record was last updated.
ExternalID	<i>Type</i> : text (max 32 characters). Nullable
	A text field where an operator may record the ID of the PO line in any
	external system it was imported from.

Database Column	Details
PurchaseOrderDetailTypeID	<i>Type:</i> integer. Key The type of the PO line. Foreign key to the PurchaseOrderDetailType table.
MSSelectPoolID	<i>Type:</i> integer. Nullable Identifies the Microsoft Select pool. Foreign key to the MSSelectPool table.
MSSelectPoints	<i>Type:</i> decimal. Nullable The number of points consumed by this purchase.
AutoAcceptRecommendation	<i>Type:</i> boolean Set this field to True to automatically accept recommendation calculated for this purchase order line in Link Licenses node.
SoftwareSkuID	<i>Type:</i> integer. Key. Nullable The SKU that was recognized. This value is optional. Foreign key to the SoftwareSku table.
PurchaseOrderDetail StatusID	<i>Type</i> : integer The current state of the purchase order details. Foreign key to the PurchaseOrderDetailStatus table. The default value of 1 links to a "New" status.
PublisherID	<i>Type:</i> integer. Nullable The publisher of this line item. This value is optional. Foreign key to the Vendor table.

PurchaseOrderDetailProperty Table

PurchaseOrderDetailProperty defines extra custom properties for all purchase order lines.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 229: Database columns for PurchaseOrderDetailProperty table

Database Column	Details
PurchaseOrderDetail	<i>Type:</i> integer. Key. Generated ID
PropertyID	Unique identifier for a purchase order line property.

Database Column	Details
PropertyName	<i>Type:</i> text (max 256 characters). Key The name of the custom property. Foreign key to the ComplianceResourceString table.
CustomPropertyDisplayX MLID	<i>Type:</i> integer. Nullable Reference to a record in the CustomPropertyDisplayXML table, describing how to show the property on a property dialog.

PurchaseOrderDetailPropertyValue Table

For each purchase order line, PurchaseOrderDetailPropertyValue stores the values for the custom properties defined in PurchaseOrderDetailProperty.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
PurchaseOrderDetail	<i>Type:</i> integer. Key. Generated ID
PropertyValueID	A unique identifier for a property value.
PurchaseOrderDetailID	<i>Type:</i> integer. Key
	The purchase order line associated with the property. Foreign key to the PurchaseOrderDetail table
PurchaseOrderDetail	<i>Type:</i> integer. Key
PropertyID	the property whose value is being stored. Foreign key to the
	PurchaseOrderDetailProperty table
PropertyValue	<i>Type:</i> text (max 4000 characters)
	The property value.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last updated the record.

Table 230: Database columns for PurchaseOrderDetailPropertyValue table

Database Column	Details	

UpdatedDate

Type: datetime. Nullable

The date the record was last updated.

PurchaseOrderDetailStatus Table

PurchaseOrderDetailStatus is a static table listing the possible states for purchase order details, broadly tracking the associated business processes.

Database Column	Details
PurchaseOrderDetail	<i>Type:</i> integer. Key. Generated ID
StatusID	A unique identifier for each PurchaseOrderDetailStatus Possible values and the corresponding default strings are:
	• 1 = New
	• 2 = Pending
	• 3 = Completed
	• 4 = Cancelled
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a purchase order status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the status resource string has no translation.

PurchaseOrderDetailType Table

PurchaseOrderDetailType is a static table listing the possible types of purchase order line item.

Table 232: Database columns for PurchaseOrderDetailType table

Database Column	Details
PurchaseOrderDetailTypeID	<pre>Type: integer. Key. Generated ID A unique identifier for each PurchaseOrderDetailType. Possible values and the corresponding default strings are: 1 = Not set</pre>
	• 2 = Software
	• 3 = Hardware
	• 4 = Service
	• 5 = Other
	• 6 = Software upgrade
	• 7 = Software maintenance
	• 8 = Disk kit
	• 9 = Hardware maintenance
	• 10 = Software Baseline
	• 11 = Software subscription.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a purchase order line item type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.

PurchaseOrderProperty Table

PurchaseOrderProperty defines extra custom properties for all purchase orders.

Table 233: Database columns for PurchaseOrderProperty table

Database Column	Details
PurchaseOrderPropertyID	<i>Type</i> : integer. Key. Generated ID Unique identifier for a purchase order property.
PropertyName	<i>Type:</i> text (max 256 characters). Key The name of the property.
CustomPropertyDisplayX MLID	<i>Type</i> : integer. Nullable Foreign key to a record in the CustomPropertyDisplayXML table, describing how to show the property on a property dialog.

PurchaseOrderPropertyValue Table

For each purchase order, PurchaseOrderPropertyValue stores the values for the custom properties defined in PurchaseOrderProperty.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 234: Database columns for PurchaseOrderPropertyValue table

Database Column	Details
PurchaseOrderProperty	<i>Type:</i> integer. Key. Generated ID
ValueID	A unique identifier for a property value.
PurchaseOrderID	<i>Type:</i> integer. Key
	The purchase order associated with this property. Foreign key to the PurchaseOrder table.
PurchaseOrderPropertyID	<i>Type:</i> integer. Key
	The property whose value is being stored. Foreign key to the PurchaseOrderProperty table.
PropertyValue	<i>Type:</i> text (max 4000 characters)
	The property value.
CreationUser	Type: text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.

Database Column	Details
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable The date the record was last updated.

PurchaseOrderStatus Table

PurchaseOrderStatus is a static table listing the possible states for purchase orders, broadly tracking the associated business processes.

Table 235: Database columns for PurchaseOrderStatus tab	le
---	----

Database Column	Details
PurchaseOrderStatusID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each PurchaseOrderStatus. Possible values and the corresponding default strings are:
	• 1 = New
	• 2 = Completed
	• 3 = Cancelled
	• 4 = Sent to approver
	• 5 = Sent to vendor
	• 6 = Item received.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a purchase order status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the status resource string has no translation.

PurchaseOrderType Table

PurchaseOrderType is a static table listing the possible types of purchase order. Reserved for future expansion.

Table 236: Database columns for PurchaseOrderType table

Database Column	Details
PurchaseOrderTypeID	 <i>Type</i>: integer. Key. Generated ID A unique identifier for each PurchaseOrderType. Possible values and the corresponding default strings are: 1 = None.
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a purchase order type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

PurchaseProgram Table

PurchaseProgram is a static table listing all known contract purchase programs.

 Table 237: Database columns for PurchaseProgram table

Database Column	Details
PurchaseProgramID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each PurchaseProgram. Possible values and the corresponding default strings are: • 1 = Microsoft Select Agreement
	 2 = Microsoft Enterprise Agreement
	• 3 = Microsoft Open Agreement
	• 4 = Adobe Cumulative Licensing Program
	• 5 = Adobe Transactional Licensing Program
	• 6 = Adobe Site License Program
	• 7 = Acronis Licensing Program
	• 8 = Attachmate Volume Purchase Account
	• 9 = Business Objects Open Licensing Program
	• 10 = CA Master License Program
	• 11 = CA Open License Program
	• 12 = Citrix Easy Licensing Program
	• 13 = Citrix Enterprise License Program
	• 14 = Citrix Open Licensing Program
	• 15 = Citrix Premium Licensing Program
	• 16 = Corel Contractual License
	• 17 = Corel Transactional Licensing
	• 18 = IBM Passport Advantage
	• 19 = McAfee TSP Licensing Program
	• 20 = Novell Corporate License Agreement
	• 21 = Novell Master License Agreement
	• 22 = Novell Volume License Agreement
	• 23 = Symantec Elite
	• 24 = Symantec Express
	• 25 = Symantec Open Licensing Program

• 26 = Symantec Rewards

Database Column	Details
	• 27 = Symantec Volume Licensing Program
	• 28 = Vmware Purchasing Program
	• 29 = Macromedia Volume License Program
	• 30 = Symantec Enterprise Option
	• 31 = Symantec Enterprise VPA.
	• 32 = Oracle Master Agreement
	• 33 = Oracle Unlimited Agreement
	• 34 = Oracle License and Services Agreement
	• 35 = Adobe Enterprise Term Licensing Agreement
	• 36 = Microsoft Products and Services Agreement
	• 37 = IBM Passport Advantage Express
	• 38 = IBM Enterprise License Agreement
	• 39 = IBM Enterprise Software and Services Option
Name	<i>Type</i> : text (max 100 characters). Key
	The display name of the purchase program.
PublisherName	<i>Type:</i> text (max 64 characters). Key
	The name of publisher under which this purchase program applies.
Code	<i>Type:</i> text (max 16 characters). Key
	A short code used to represent this purchase program.

QuerySnapshot Table

QuerySnapshot holds the snapshot of data for a report

Table 238: Database columns for QuerySnapshot table

Database Column	Details
QuerySnapshotID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a query snapshot.
QueryContext	<i>Type</i> : text (max 200 characters). Key
	The query context to partition different queries.
ComplianceSavedSearchID	<i>Type:</i> integer. Key. Nullable
	The query definition this snapshot is for. Foreign key to the
	ComplianceSavedSearch table.
ComplianceOperatorID	<i>Type:</i> integer. Key
	The operator who ran the report. Foreign key to the ComplianceOperator
	table.
SnapshotName	<i>Type:</i> text (max 200 characters)
	Name of snapshot.
SnapshotSchema	Type: XML
	Schema of snapshot.
SnapshotDate	<i>Type:</i> datetime
	Date and time of snapshot (UTC)
SnapshotBuildTime	<i>Type:</i> big integer
	Number of milliseconds taken to build the snapshot.
SnapshotRows	<i>Type:</i> big integer
	Number of rows in the snapshot.

RelationType Table

RelationType is a static table containing types of relationship between objects

Table 239: Database	columns f	for RelationT	ype table
---------------------	-----------	---------------	-----------

Database Column	Details
RelationTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each RelationType. Possible values and the
	corresponding default strings are:
	 1 = VMware ESX host managed by vCenter

Database Column	Details
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing a relation type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the type resource string has no translation.
ImporterString	<i>Type:</i> text (max 100 characters). Key The text value provided by adapters when importing relation type.

ResponsibilityType Table

ResponsibilityType is a static table listing possible end-user responsibilities.

Database Column	Details
ResponsibilityTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for an end-user's title or responsibility. Possible values and the corresponding default strings are:
	• 1 = Blank
	• 2 = Owner
	• 3 = Signatory
	• 4 = Contract Manager
	• 5 = Point of Contact
	• 6 = Negotiator
	• 7 = Interested Party.
ResourceString	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a user responsibility. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the responsibility resource string has no translation.

RestrictedAccessType Table

RestrictedAccessType is a static table holding access types

Table 241: Database columns for RestrictedAccessType table

Database Column	Details
RestrictedAccessTypeID	 <i>Type:</i> integer. Key. Generated ID A unique identifier for a type of access. Values are: 1 = All users 2 = Accessible only to creator
RestrictedAccessTypeName	<i>Type:</i> text (max 512 characters). Key Access type name.

RulesEngineRuleDefinition Table

This table stores rule definitions used for consolidating users.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 242: Database columns for RulesEngineRuleDefinition table

Database Column	Details
RuleDefinitionID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for the rule definition.
RuleDefinitionName	<i>Type</i> : text (max 128 characters)
	Name of the rule.
RuleTypeID	<i>Type</i> : integer
	Foreign key to the rule type.
RuleDefinition	<i>Type</i> : text
	The rule definition XML used to build the rule statement used by the rules engine.
IsActive	<i>Type</i> : boolean
	Whether or not this rule is active for execution.
CreationUser	<i>Type</i> : text (max 256 characters)
	The user who created the system landscape.
CreationDate	<i>Type</i> : datetime
	The data and time the system landscape was created.

Database Column	Details
UpdatedUser	<i>Type:</i> text (max 256 characters) The last user who update the system landscape.
UpdatedDate	<i>Type:</i> datetime The date and time the system landscape was last updated.

RulesEngineRuleType Table

This table stores the available rule types used for rulesengine.

Table 243: Database columns for RulesEngineRuleType table

Database Column	Details
RuleTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the rule type.
TypeName	<i>Type:</i> text (max 100 characters). Key
	A unique name for the rule type.
TitleResourceName	<i>Type:</i> text (max 256 characters). Nullable
	A localizable resource string representing a rule type. Foreign key to the
	ComplianceResourceString table.
TitleDefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the rule type resource string has no translation.
RuleTemplate	<i>Type:</i> text
	The template used to build a rule for the rules engine.
DefaultRuleDefinition	<i>Type:</i> text. Nullable
	Default rule definition for newly created rule

SAMLConfiguration Table

The SAMLConfiguration table holds all the saml configurations for the tenants.

Table 244: Database columns for SAMLConfiguration table

Database Column	Details
SAMLConfigurationID	<i>Type:</i> integer. Key. Generated ID
	Unique identifier of saml configuration, this is a primary key.
State	<i>Type:</i> text (max 20 characters)
	Indicates the state of SAML configuration for the tenant.
MetadataFileName	<i>Type:</i> text (max 256 characters). Nullable
	File name of the SAML configuration metadata File.
MetadataContent	<i>Type:</i> text. Nullable
	Content from SAML configuration metadata File.
MetadataURL	<i>Type:</i> text. Nullable
	URL to download SAML configuration.
EntityID	Type: text (max 200 characters). Nullable
	An entity ID is a globally unique name for a SAML entity.
Created	<i>Type:</i> datetime
	The date the record was created.
Updated	<i>Type:</i> datetime. Nullable
	The date the record was last updated.

SecurityType Table

SecurityType lists the types of security model that can be used to determine access to a contract or document.

Table 245: Database columns for SecurityType table

Database Column	Details
SecurityTypeID	 Type: integer. Key. Generated ID A unique identifier for each SecurityType. Possible values and the corresponding default strings are: 1 = Public (security is controlled by the operator's roles) 2 = Restricted (security is controlled by an access control list of account names).

Database Column	Details
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing a security type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters) The text to display if the type resource string has no translation.

SerialNumberBlackList Table

SerialNumberBlackList stores a blacklist of invalid serial numbers.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 246: Database columns for SerialNumberBlackList table

Database Column	Details
SerialNumberBlackListID	<i>Type:</i> integer. Key. Generated ID The unique identifier for a blacklisted serial number.
SerialNo	<i>Type:</i> text (max 100 characters). Key The blacklisted serial number.

SessionUIDBeacon Table

The SessionUIDBeacon table stores the task's SessionUID and the beacon where the task is running .

Table 247: Database	columns for	SessionUIDBeacon	table
---------------------	-------------	------------------	-------

Database Column	Details
SessionUID	<i>Type:</i> unique identifier. Key Unique task run identifier
BeaconID	<i>Type:</i> integer. Key Beacon where the task's session ran

ShippingMethod Table

ShippingMethod is a static table listing possible delivery methods. Reserved for future expansion.

Table 248: Database columns for S	ShippingMethod table
-----------------------------------	----------------------

Database Column	Details
ShippingMethodID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each ShippingMethod. Possible values and the corresponding default strings are: • 1 = None.
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing a shipping method. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the shipping method resource string has no translation.

SoftwareLicenseContractPaymentSchedule Table

SoftwareLicenseContractPaymentSchedule links a payment schedule to a software license, via a link from that software license to a contract.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseContractID	<i>Type:</i> integer. Key Identifies a link between a software license and a contract. Foreign key to the SoftwareLicenseContract table.
PaymentScheduleID	<i>Type:</i> integer. Key Identifies a payment schedule. Foreign key to the PaymentSchedule table.

SystemShutdown Table

A row in this table indicates that the system is being taken down, and is used to show a warning to users.

Table 250: Database columns for SystemShutdown table

Database Column	Details
SystemShutdownID	<i>Type:</i> integer. Key. Generated ID Synthetic key for this table.
MessageResourceName	<i>Type:</i> text (max 256 characters). Nullable A resource name used to look up a message to show to the operator
StartTime	<i>Type:</i> datetime The time the shutdown is scheduled to begin
EndTime	<i>Type:</i> datetime The estimated time that the shutdown will end

TaskExecutionStatus Table

The TaskExecutionStatus table stores progress data for rules and background tasks.

Table 251: Database columns for TaskExecutionStatus table

Database Column	Details
TaskExecutionStatusID	<i>Type:</i> integer. Key. Generated ID Auto-generated task execution status ID
SessionUID	<i>Type:</i> unique identifier. Key Unique task run identifier
TaskName	<i>Type:</i> text (max 255 characters). Key The name of task.
ActivityTypeID	<i>Type:</i> integer. Key Foreign key to the ActivityType table
DateStarted	<i>Type:</i> datetime. Nullable Start date and time for a task.
DateCompleted	<i>Type</i> : datetime. Nullable Completion date and time for a task.

Database Column	Details
EventTypeStatusID	<i>Type:</i> integer. Key Foreign key to the EventTypeStatus table
BeaconRuleID	<i>Type:</i> integer. Key. Nullable Foreign key to the BeaconRule table
ScheduledTriggerDateTick	<i>Type:</i> big integer. Key. Nullable Executed date time in Tick.
BeaconID	<i>Type:</i> integer. Key. Nullable Beacon where the task is executing.
BeaconPolicyRevision Number	<i>Type:</i> integer. Nullable Beacon policy revision number
OperatorLogin	<i>Type:</i> text (max 255 characters). Nullable Login of the operator who started task.

TaskExecutionStatusStep Table

The TaskExecutionStatusStep table stores progress data for rule or background task steps.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
TaskExecutionStatusStepID	<i>Type:</i> integer. Key. Generated ID
	Auto-generated task step execution status ID
TaskExecutionStatusID	<i>Type</i> : integer. Key
	Foreign key to TaskExecutionStatus table.
TaskStepID	<i>Type:</i> integer. Key
	The ID of task step.
BeaconRuleAction	<i>Type</i> : integer. Key. Nullable
PropertyID	The ID of rule action subtask.
DateStarted	<i>Type:</i> datetime. Nullable
	Start date and time for a step.

Table 252: Database columns for TaskExecutionStatusStep table

Database Column	Details
DateCompleted	<i>Type:</i> datetime. Nullable
	Completion date and time for a step.
EventTypeStatusID	<i>Type:</i> integer. Key
	Foreign key to the EventTypeStatus table
BeaconUID	<i>Type:</i> unique identifier. Key. Nullable
	Beacon ID.
EventTypeID	Type: integer. Key. Nullable
	Foreign key to the EventType table
EventID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the Event table
Location	<i>Type:</i> text (max 255 characters). Nullable
	Server name where operation was performed.
TaskParameters	<i>Type:</i> XML. Nullable
	parameters for the task step.

TaskStep Table

The TaskStep table stores task steps.

Table 253: Database columns for TaskStep table

Database Column	Details
TaskStepID	<i>Type</i> : integer. Key. Generated ID
	Auto-generated task step ID
ActivityTypeID	<i>Type:</i> integer. Key
	Foreign key to the ActivityType table
TaskStepResourceName	<i>Type</i> : text (max 255 characters). Key
	Task step name resource name
TaskStepDefaultValue	<i>Type</i> : text (max 255 characters)
	Task step name default value
TaskStepOrder	<i>Type:</i> integer
	Task step order index

TaskStepEventType Table

The TaskStepEventType table stores eventType realted to the taskStep.

Table 254: Database columns for TaskStepEventType table

Database Column	Details
TaskStepID	<i>Type:</i> integer. Key Foreign key to the TaskStep table
EventTypeID	<i>Type:</i> integer. Key Foreign key to the EventType table

TermAndCondition Table

TermAndCondition stores a list of terms and conditions related to a contract.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 255: Database columns for TermAndCondition table

Database Column	Details
TermAndConditionID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the term/condition.
TermAndConditionTypeID	<i>Type:</i> integer. Key
	The type of term/condition. Foreign key to TermAndConditionType table.
Description	<i>Type:</i> text (max 100 characters). Key
	A description assigned by the operator.
DocReference	Type: text (max 100 characters). Nullable
	A text reference to a document for this term/condition.
Comments	<i>Type:</i> text. Nullable
	Comments about this term/condition.
BeginDate	<i>Type:</i> datetime. Nullable
	The start date for this term or condition.
EndDate	<i>Type:</i> datetime. Nullable
	The end date for this term or condition.

Database Column	Details
ContractID	<i>Type:</i> integer. Key The contract to which this term/condition applies. Foreign key to the Contract table.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable The operator who created the record.
CreationDate	<i>Type</i> : datetime The date the term/condition was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable The name of the operator who last updated the term/condition.
UpdatedDate	<i>Type</i> : datetime. Nullable The date the record was last updated.
EmailComplianceUserID	<i>Type:</i> integer. Key. Nullable A user who may be emailed according to conditions on this term/condition. Foreign key to the ComplianceUser table.
EmailIntervalTypeID	<i>Type:</i> integer. Key. Nullable The interval type for EmailInterval. Foreign key to the IntervalType table.
EmailInterval	<i>Type:</i> integer. Nullable The interval used when sending emails.
ReminderIntervalTypeID	<i>Type:</i> integer. Key. Nullable The interval type for ReminderInterval. Foreign key to the IntervalType table.
ReminderInterval	<i>Type:</i> integer. Nullable The interval used when sending reminders.
EscalationCompliance UserID	<i>Type:</i> integer. Key. Nullable A user who may be emailed if the term/condition needs to be escalated. Foreign key to the ComplianceUser table.
EscalationIntervalTypeID	<i>Type:</i> integer. Key. Nullable The interval type for EscalationInterval. Foreign key to the IntervalType table.
EscalationInterval	<i>Type:</i> integer. Nullable The interval used when sending escalation messages.

Database Column

Details

Auditable

Type: boolean

Boolean to indicate whether the term/condition is auditable.

TermAndConditionTask Table

TermAndConditionTask holds extra information about a task.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 256: Database columns for TermAndConditionTask table

Database Column	Details
ComplianceTaskID	<i>Type:</i> integer. Key
	The task this extra information applies to. Foreign key to the ComplianceTask table.
Completed	<i>Type</i> : boolean
	Set this field to True if this task has been completed.
CompletionDate	<i>Type</i> : datetime. Nullable
	The date of completion of the task.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	The end-user this task is assigned to. Foreign key to the ComplianceUser
	table.
Notes	<i>Type</i> : text. Nullable
	Notes or comments related to the task.

TermAndConditionType Table

TermAndConditionType stores a list of types of different terms/conditions that may be associated with contracts.

Database Column	Details
TermAndConditionTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each TermAndConditionType. The default values and corresponding default strings are: • 1 = Acceptance Period
	• 2 = Price Change
	 3 = Cancellation 4 = Renewal
	• 5 = Expiry
	 6 = Review 7 = Limitation.
TermAndConditionType ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a term/ condition type. Foreign key to the ComplianceResourceString table.
TermAndConditionType DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.
ManageSoftType	<i>Type:</i> boolean If set to True, this field indicates that this term and condition type was created by FlexNet Manager Suite and should not be deleted or edited. If False, the type has been created by an operator, and may be modified.

Table 257: Database columns for TermAndConditionType table

UserNameBlacklist Table

UserNameBlacklist stores a list of excluded accounts that will not be imported into FlexNet Manager Suite. If an end-user with account name matching a record in UserNameBlacklist already exists in FlexNet Manager Suite, that end-user will not be included in compliance calculations and will not appear in many of the end-user lists.

Table 258: Database columns for UserNameBlacklist table

Database Column	Details
UserNameBlacklistID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the blacklisted account.
UserName	<i>Type:</i> text (max 64 characters). Key A blacklisted account name. May contain wildcards (%, _). End-users whose domain\SAM account name match this value will be excluded from compliance calculations.

VMEnabledState Table

VMEnabledState is a static table listing the possible operational states of a virtual machine.

Table 259: Database columns for	<pre>vMEnabledState table</pre>
---------------------------------	---------------------------------

Database Column	Details
VMEnabledStateID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each VMEnabledState. Possible values and the corresponding default strings are:
	• 1 = Started
	• 2 = Stopped
	• 3 = Suspended
	• 4 = Unknown
	• 5 = Terminated.
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a virtual machine operational state. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the operational state resource string has no translation.
ImporterString	<i>Type:</i> text (max 100 characters). Nullable
	This is the string which is coming from the data source.

VMHostDatastore Table

VMHostDatastore stores host and datastore relationship.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 260: Database columns for VMHostDatastore table

Database Column	Details
HostComplianceComputerID	<i>Type:</i> integer. Key Host computer which has the datastore. Foreign key to the ComplianceComputer table.
Datastore	<i>Type:</i> text (max 64 characters). Key. Nullable The datastore available on the VM host.

VMHostManagedBySoftware Table

VMHostManagedBySoftware stores relationships between management software and VM hosts it manages. The RelationTypeID specifies the context of these relationships

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
VMHostManagedBySoftwareID	<i>Type:</i> integer. Key. Generated ID The primary key of VMHostManagedBySoftware.
InstalledSoftwareID	<i>Type:</i> integer. Key A unique identifier of an InstalledSoftware.
RelationTypeID	<i>Type:</i> integer. Key The type of relationship between management software and the VM hosts. Foreign key to the RelationType table.
ComplianceComputerID	<i>Type:</i> integer. Key A unique identifier of a ComplianceComputer.

Table 261: Database columns for VMHostManagedBySoftware table

VMHostProperty Table

VMHostProperty stores properties of VM host.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 262: Database columns for VMHostProperty table

Database Column	Details
HostComplianceComputerID	<i>Type:</i> integer. Key
	Host computer which has the datastore. Foreign key to the
	ComplianceComputer table.
VMTypeID	<i>Type:</i> integer. Nullable
	The VMHost technology type. Foreign key to the VMType table.
HypervisorVersion	<i>Type:</i> text (max 32 characters). Nullable
	The hypervisor version of the VM host.
HyperThreadingEnabled	<i>Type:</i> boolean. Nullable
	Set this to True if this VM host has hyper threading enabled.
PowerState	<i>Type:</i> text (max 32 characters). Nullable
	The power state of the VM host.
ManagingSoftwareVersion	<i>Type:</i> text (max 32 characters). Nullable
	The version of the managing software for the VM host.
ConnectionState	<i>Type:</i> text (max 32 characters). Nullable
	The connection state of the VM host to the managing software envrionment.
CloudServiceInstance	<i>Type:</i> integer. Nullable
TypeID	Cloud instance type defined by provider. Foreign key to the
	CloudServiceInstanceType table
CloudServiceRegionID	<i>Type</i> : integer. Nullable
	Region of the instance. Foreign key to the CloudServiceRegion table.
AvailabilityZoneID	<i>Type:</i> integer. Nullable
	Location of the instance. Foreign key to the AvailabilityZone table
AllocationTime	<i>Type:</i> datetime. Nullable
	The time that the Dedicated Host was allocated.

Database Column	Details
ReleaseTime	<i>Type</i> : datetime. Nullable The time that the Dedicated Host was released.
Autoplacement	<i>Type:</i> boolean. Nullable Whether auto-placement is on or off.

VMPool Table

VMPool contains information about virtual machine pools (logical groups of VMs or partitions).

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
VMPoolID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for a virtual machine pool.
PoolName	<i>Type:</i> text (max 100 characters). Key
	The name of the pool.
PoolFriendlyName	<i>Type:</i> text (max 256 characters)
	The friendly name of the pool.
Path	<i>Type:</i> text (max 1000 characters)
	The full path of the pool (including parent pool names).
VCObjectID	<i>Type:</i> text (max 256 characters). Nullable
	The ID of the virtual machine folder (pool) in Virtual Center.
NextChild	<i>Type:</i> integer
	One more than the number of children this pool has.
PoolPathID	<i>Type:</i> text (max 128 characters)
	A numerical representation of the path of this pool, constructed from
	VMPoolID values (something like: "1.2.").
HostComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	A link to the host computer that this pool exists on. This is a foreign key to
	the ComplianceComputer table.

Table 263: Database columns for VMPool table

Database Column	Details
VMPoolTypeID	<i>Type:</i> integer. Key
	The type of pool. Foreign key to the VMPoolType table.
VirtualMachineID	<i>Type:</i> integer. Nullable
	If this pool is a virtual machine or partition itself, this is a link to that virtual
	machine or partition. Foreign key to the VirtualMachine table.
NumberOfProcessors	<i>Type:</i> decimal. Nullable
	The number of processors in this pool.
NumberOfLogicalProcessors	<i>Type:</i> integer. Nullable
	The active number of threads in this pool.
NumberOfCores	<i>Type:</i> decimal. Nullable
	The number of cores in this pool.
MaxNumberOfLogical	<i>Type:</i> integer. Nullable
Processors	The maximum number of threads assigned for this pool of type processor set.

VMPoolType Table

VMPoolType is a static table listing the possible types of a virtual machine pool.

Table 264: Database columns for VMPoolType table

Database Column	Details
VMPoolTypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for a VMPoolType. Possible values and the corresponding
	default names are:
	• 1 = Folder
	• 2 = Data Center
	• 3 = Compute Resource
	• 4 = Host System
	• 5 = Resource Pool
	• 6 = Virtual Machine
	• 7 = Physical Shared Pool
	• 8 = Virtual Shared Pool
	• 9 = LPAR
	• 10 = RSET
	• 11 = Cluster Compute Resource.
	• 12 = PSET
VCTypeID	<i>Type:</i> text (max 32 characters)
	The type of the virtual machine folder in Virtual Center.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a pool type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the pool type resource string has no translation.

VMSourceType Table

VMSourceType is a static table used to define possible virtual machine inventory source values (that is, whether the properties were created manually or reported by the compliance importer).

Table 265: Database columns for VMSourceType table

Database Column	Details
VMSourceTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each VMSourceType. Possible values and the corresponding default strings are:
	 1 = Manual (the virtual machine properties were manually created and have not been updated by the compliance importer)
	• 2 = VM Host (the virtual machine's host recently reported inventory and updated these virtual machine properties).
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a virtual
	machine source type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the source type resource string has no translation.

VMState Table

VMState is a static table listing the possible relationships between a virtual machine and a physical (inventoried) computer.

Table 266:	Database	columns	for	VMState table
------------	----------	---------	-----	---------------

Database Column	Details
VMStateID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each VMState. Possible values and the corresponding default strings are:
	 1 = Linked (the virtual machine is linked to an inventoried or manually created computer)
	 2 = Unlinked (the virtual machine is only linked to a "light" computer, automatically created from the host computer's inventory)
	• 3 = Duplicated (the virtual machine has a duplicate UUID and is not linked to an inventoried or manually created computer).
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing a virtual machine state. Foreign key to the ComplianceResourceString table.

Database Column	Details
DefaultValue	Type: text (max 100 characters)
	The text to display if the state resource string has no translation.

VMType Table

VMType is a static table listing the possible types of virtual machine or partition.

Table 267: Database columns for VMType table

Database Column	Details
VMTypeID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for a VMType. Possible values and the corresponding default names are:
	• 1 = VMware
	• 2 = Hyper-V
	• 3 = LPAR
	• 4 = WPAR
	• 5 = nPar
	• 6 = vPar
	• 7 = SRP
	• 8 = Zone
	• 9 = Unknown.
	• 10 = Oracle VM
	• 11 = AWS EC2
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a virtual machine or partition type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters)
	The text to display if the type resource string has no translation.

Vendor Table

The Vendor table contains a list of all the vendors in the system.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 268: Database columns for Vendor table

Database Column	Details
VendorID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the vendor.
VendorName	<i>Type:</i> text (max 64 characters). Key
	The name of the vendor.
VendorPreviousName	<i>Type:</i> text (max 64 characters). Nullable
	Any earlier name that the vendor was previously known as.
BusinessPhoneNumber	<i>Type:</i> text (max 30 characters). Nullable
	The business phone number of the vendor.
FaxPhoneNumber	<i>Type:</i> text (max 30 characters). Nullable
	The fax number of the vendor.
Address_Street	<i>Type:</i> text (max 200 characters). Nullable
	The street address of the vendor.
Address_City	<i>Type:</i> text (max 200 characters). Nullable
	The city of the vendor.
Address_State	<i>Type:</i> text (max 200 characters). Nullable
	The state or province of the vendor.
Address_ZIP	<i>Type:</i> text (max 20 characters). Nullable
	The ZIP or postal code of the vendor.
Address_Country	<i>Type:</i> text (max 100 characters). Nullable
	The country of the vendor.
Address2_Street	<i>Type:</i> text (max 200 characters). Nullable
	The second street address of the vendor, if applicable.
Address2_City	<i>Type:</i> text (max 200 characters). Nullable
	The second city of the vendor.
Address2_State	<i>Type:</i> text (max 200 characters). Nullable
	The second state or province of the vendor.
Address2_ZIP	<i>Type:</i> text (max 20 characters). Nullable
	The second ZIP or postal code of the vendor.

Database Column	Details
Address2_Country	<i>Type:</i> text (max 100 characters). Nullable
	The second country of the vendor.
WebSite	<i>Type:</i> text (max 200 characters). Nullable
	The web site of the vendor.
Email	<i>Type:</i> text (max 200 characters). Nullable
	The email address of the vendor.
ParentVendorID	<i>Type:</i> integer. Nullable
	A link to a vendor's parent vendor. Foreign key to another vendor record in
	this Vendor table. Vendor hierarchies are not currently implemented.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type</i> : datetime
	The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.
AutomaticallyAccept	<i>Type</i> : boolean
Purchases	Whether purchases from this vendor should have their license linking
	recommendations in the EntitlementRecommendation table automatically accepted.

VendorContact Table

VendorContact contains a list of all the vendor contacts, or individuals employed by the vendor with whom this enterprise has contact.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 269: Database columns for VendorContact table

Database Column	Details
VendorContactID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the contact.
UserTitleID	<i>Type:</i> integer. Nullable
	The title of the contact's name. Foreign key to the UserTitle table.
FirstName	<i>Type:</i> text (max 128 characters)
	The first name of the contact.
MiddleName	<i>Type</i> : text (max 128 characters). Nullable
	The middle name(s) of the contact.
LastName	<i>Type:</i> text (max 128 characters). Nullable
	The last name name of the contact.
UserSuffixID	<i>Type:</i> integer. Nullable
	The suffix to the name of the contact.
JobTitle	<i>Type</i> : text (max 128 characters). Nullable
	The job title of the contact.
VendorID	<i>Type</i> : integer. Key
	A link to the contact's parent vendor. Foreign key to the Vendor table.
BusinessPhoneNumber	<i>Type:</i> text (max 30 characters). Nullable
	The business phone number of the contact.
MobilePhoneNumber	<i>Type</i> : text (max 30 characters). Nullable
	The mobile phone number of the contact.
FaxPhoneNumber	<i>Type</i> : text (max 30 characters). Nullable
	The fax number of the contact.
Address_Street	<i>Type</i> : text (max 200 characters). Nullable
	The street address of the contact.
Address_City	<i>Type</i> : text (max 200 characters). Nullable
	The city of the contact.
Address_State	<i>Type</i> : text (max 200 characters). Nullable
	The state or province of the contact.
Address_ZIP	<i>Type</i> : text (max 20 characters). Nullable
	The ZIP or postal code of the contact.

Database Column	Details
Address_Country	<i>Type</i> : text (max 100 characters). Nullable
	The country of the contact.
Address2_Street	Type: text (max 200 characters). Nullable
	The second street address of the contact, if applicable.
Address2_City	<i>Type:</i> text (max 200 characters). Nullable
	The second city of the contact.
Address2_State	<i>Type</i> : text (max 200 characters). Nullable
	The second state or province of the contact.
Address2_ZIP	<i>Type:</i> text (max 20 characters). Nullable
	The second ZIP or postal code of the contact.
Address2_Country	<i>Type</i> : text (max 100 characters). Nullable
	The second country of the contact.
Email	<i>Type:</i> text (max 200 characters). Nullable
	The email address of the contact.
Messenger	Type: text (max 200 characters). Nullable
	The instant messenger address of the contact.
Comments	<i>Type:</i> text. Nullable
	Comments recorded about the contact.
CreationUser	Type: text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type</i> : datetime
	The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type</i> : datetime. Nullable
	The date the record was last updated.

VendorProperty Table

VendorProperty defines extra custom properties for all vendors.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 270: Database columns for VendorProperty table

Database Column	Details
VendorPropertyID	<i>Type:</i> integer. Key. Generated ID Unique identifier for a vendor property.
PropertyName	<i>Type:</i> text (max 256 characters). Key The name of the custom property. Foreign key to the ComplianceResourceString table.
CustomPropertyDisplayX MLID	<i>Type:</i> integer. Nullable Reference to a record in the CustomPropertyDisplayXML table, describing how to show the property on a property dialog.

VendorPropertyValue Table

For each vendor, VendorPropertyValue stores the values for the custom properties defined in VendorProperty.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
VendorPropertyValueID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a property value.
VendorID	<i>Type:</i> integer. Key The vendor associated with this property. Foreign key to the Vendor table.
VendorPropertyID	<i>Type:</i> integer. Key The property whose value is being stored. Foreign key to the VendorProperty table.
PropertyValue	<i>Type:</i> text (max 4000 characters) The property value.

Database Column	Details
CreationUser	<i>Type:</i> text (max 128 characters). Nullable The operator who created the record.
CreationDate	<i>Type:</i> datetime The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable The date the record was last updated.

VirtualMachine Table

VirtualMachine stores extra information for computers identified as virtual machines or hardware partitions.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 272: Database columns for VirtualMachine table

Database Column	Details
VirtualMachineID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for virtual machine or partition properties associated with a computer.
HostComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	The virtual machines or partition's host computer. Foreign key to the ComplianceComputer table.
ComplianceComputerID	<i>Type:</i> integer. Key
	The computer associated with these virtual machine or partition properties. Computer in the ComplianceComputer table.
VMTypeID	<i>Type:</i> integer
	The type of virtual machine or partition. Foreign key to the VMType table.
UUID	<i>Type:</i> text (max 256 characters). Nullable
	The UUID (Universally Unique Identifier) of the virtual machine. Used to match virtual machine properties to their associated ComplianceComputer.

Database Column	Details
VMName	<i>Type:</i> text (max 256 characters). Nullable
	The name of the virtual machine or partition.
VMLocation	<i>Type:</i> text (max 256 characters). Nullable
	The location of the virtual machine on the file system.
GuestFullName	<i>Type:</i> text (max 256 characters). Nullable
	The configured operating system for the guest.
FriendlyName	<i>Type:</i> text (max 256 characters). Nullable
	The friendly name of the virtual machine or partition.
VCObjectID	<i>Type:</i> text (max 256 characters). Nullable
	The ID of the virtual machine in Virtual Center.
TotalMemory	<i>Type:</i> big integer. Nullable
	The total memory of the virtual machine (in bytes).
VMStateID	<i>Type:</i> integer
	The state of the virtual machine, related to whether it is linked to a computer or not. Foreign key to the VMState table.
VMPoolID	<i>Type:</i> integer. Nullable
	The resource pool that the virtual machine belongs to. Foreign key to the VMPool table.
ZoneResourceManagement	<i>Type:</i> integer. Nullable
MethodTypeID	The resource management method used for this Solaris Zone VM. Foreign key to the ZoneResourceManagementMethodType table.
CPUUsage	<i>Type:</i> integer. Nullable
	The maximum CPU usage of the Virtual Machine (measured in MHz).
MemoryUsage	<i>Type:</i> big integer. Nullable
	The maximum memory usage of the Virrtual Machine (in bytes).
MaxNumberOfLogical	<i>Type:</i> decimal. Nullable
Processors	The maximum number of threads this VM is allowed to access.
VMEnabledStateID	<i>Type:</i> integer
	The operational state of the virtual machine (powered on, off, and so on). Foreign key to the VMEnabledState table.
VMSourceTypeID	<i>Type:</i> integer
	Whether the virtual machine properties are manually entered or created from inventory. Foreign key to the VMSourceType table.

Database Column	Details
CreationUser	<i>Type</i> : text (max 256 characters)
	The operator who created this record.
CreationDate	<i>Type:</i> datetime
	The date/time when this record was created.
UpdatedUser	<i>Type:</i> text (max 256 characters). Nullable
	The operator who last updated this record.
UpdatedDate	<i>Type:</i> datetime
	The date/time when this record was last updated.
AffinityEnabled	<i>Type:</i> boolean
	Set this to True if this VM is unable to move to different host computers.
CPUAffinity	<i>Type:</i> text (max 256 characters). Nullable
	Contains the CPU Affinity value for virtual machines (Host Logical processors)
CoreAffinity	<i>Type</i> : text (max 256 characters). Nullable
	Contains the Core Affinity value for virtual machine
PartitionID	<i>Type</i> : text (max 100 characters). Nullable
	Partition ID generated and used by the managing virtualization platform
PartitionNumber	<i>Type:</i> integer. Nullable
	Number of this partition
IsHostAssignedManually	<i>Type:</i> boolean
	Was the virtual machine assigned to its host manually? This prevents unlinking of the virtual machine.

XMLInsertType Table

XMLInsertType is a static table storing how custom property XML snippets will be inserted into the default property display layout XML file.

Table 273: Database columns for XMLInsertType table

Database Column	Details
XMLInsertTypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each XMLInsertType. Possible values are:
	• 1 = Before (the new snippet needs to go before the existing XML element)
	• 2 = After (the new snippet needs to go after the existing XML element)
	• 3 = Replace (the new snippet needs to replace the existing XML element)
	 4 = First child (the new snippet needs to be added as the first child of the existing XML element)
	• 5 = Last child (the new snippet needs to be added as the last child of the existing XML element).
TypeDescription	<i>Type</i> : text (max 50 characters). Key
	A description of the insert type.

ZoneResourceManagementMethodType Table

ZoneResourceManagementMethodType is a static table listing the possible resource management methods which can be used for Solaris Zones.

Table 274: Database columns for	ZoneResourceManagementMethodType table

Database Column	Details
ZoneResourceManagement	<i>Type:</i> integer. Key. Generated ID
MethodTypeID	A unique identifier for a ZoneResourceManagementMethodType. Possible values and the corresponding default names are:
	• 1 = resource-pool
	• 2 = capped-cpu
	• 3 = dedicated-cpu
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a Solaris
	Zone resource management method. Foreign key to the
	ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the resource management method resource string has no translation.

Database Column

Details

ImporterString

Type: text (max 100 characters)

This is the string which is coming from the data source.

Compliance.Logic.Discovery Tables

The complete set of database tables documented here includes:

- ASN1Object table (see ASN1Object Table)
- DeviceRole table (see DeviceRole Table)
- DiscoveredDevice table (see DiscoveredDevice Table)
- DiscoveredDeviceCalculatedMember table (see DiscoveredDeviceCalculatedMember Table)
- DiscoveredDeviceParent table (see DiscoveredDeviceParent Table)
- DiscoveredDeviceSNMPInfo table (see DiscoveredDeviceSNMPInfo Table)
- DiscoveredDeviceVDIBrokerInfo table (see DiscoveredDeviceVDIBrokerInfo Table)
- DiscoveredDeviceVDIInfo table (see DiscoveredDeviceVDIInfo Table)
- DiscoveredDeviceVirtualizationInfo table (see DiscoveredDeviceVirtualizationInfo Table)
- KnownOracleListener table (see KnownOracleListener Table)
- KnownOracleService table (see KnownOracleService Table)
- Site table (see Site Table)
- SiteSubnet table (see SiteSubnet Table)
- VirtualizationProductName table (see VirtualizationProductName Table)

ASN1Object Table

Stores a mapping from an ASN ObjectID (OID) to a type of device.

Table 275: Database columns for ASN10bject table

Database Column	Details
OID	<i>Type:</i> text (max 128 characters). Key ASN object identifier.
Description	<i>Type:</i> text (max 512 characters) The fully expanded text version of the object identifier.

Database Column	Details
ObjectRole	<i>Type:</i> integer. Nullable What role does the device perform?

DeviceRole Table

A lookup table of possible roles for network devices.

Table 276:	Database	columns for	r DeviceRole table
------------	----------	-------------	--------------------

Database Column	Details
DeviceRoleID	<i>Type</i> : integer. Key. Generated ID
	The id of the device role.
Description	<i>Type</i> : text (max 64 characters). Key
	The name of the device role. Possible id and name pairs are:
	• 0 = Computer
	• 1 = Workstation
	• 2 = Server
	• 3 = Printer
	• 4 = Switch
	• 5 = Router
	• 6 = Hub
	• 7 = NetworkDevice
	• 8 = Vendor.

DiscoveredDevice Table

A DiscoveredDevice is a loose record of the discovery of a device on a network, using any of a number of discovery methods. As such, the same device may be found in more than one way (see DuplicateID which may be able to track this fact if known), or by more than one distinguishing feature. Accordingly this table has a somewhat unsatisfactory primary key!

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 277: Database columns for DiscoveredDevice table

Database Column	Details
DeviceID	<i>Type:</i> integer. Key. Generated ID
	Auto-generated identity number.
DeviceUID	<i>Type:</i> unique identifier. Key
	A unique external identifier for the device.
DuplicateID	<i>Type:</i> integer. Key. Nullable
	Reference to another discovery record for this device, if known.
ComputerID	<i>Type:</i> integer. Key. Nullable
	FlexNet Manager Suite
	computer id, if known
DeviceName	<i>Type:</i> text (max 64 characters). Key. Nullable
	NetBIOS name for computers or any name for other devices, if known.
DNSFullName	<i>Type</i> : text (max 256 characters). Key. Nullable
	Fully qualified DNS name, if known.
NTDomainName	<i>Type:</i> text (max 256 characters). Key. Nullable
	NT domain name, if known.
IPAddress	<i>Type:</i> text (max 64 characters). Key. Nullable
	IP address of the device.
IPSubnet	<i>Type:</i> text (max 64 characters). Nullable
	IP subnet that contains the node.
IPSubnetMask	<i>Type:</i> text (max 64 characters). Nullable
	IP subnet mask for the subnet contains the device.
PhysicalAddress	<i>Type:</i> text (max 64 characters). Key. Nullable
	Network adapter physical address of the node. Can be a MAC address or token ring address.

Database Column	Details
DeviceRole	<i>Type:</i> integer. Nullable
	What role does the device perform?
	• NULL = unknown
	• 0 = Computer (don't know if server or workstation)
	• 1 = Workstation
	• 2 = Server
	• 3 = Printer
	• 4 = Switch
	• 5 = Router
	• 6 = Hub
OperatingSystem	<i>Type:</i> text (max 128 characters). Nullable
	Operating system of the node, if it is a computer.
IsManaged	<i>Type:</i> integer. Key. Nullable
	Is the device to be managed by FlexNet Manager Suite? $0 = no$, $1 = yes$, NULL = unknown.
Description	<i>Type:</i> text (max 256 characters). Nullable
	Operator-entered description of the device.
SystemDescription	<i>Type:</i> text (max 256 characters). Nullable
	This field is currently unused.
SystemLocation	<i>Type:</i> text (max 256 characters). Nullable
	This field is currently unused.
SystemContact	<i>Type:</i> text (max 256 characters). Nullable
	This field is currently unused.
FirstDiscovered	<i>Type:</i> datetime
	The date and time that the node was first discovered.
LastUpdate	<i>Type:</i> datetime
	The last time the node was checked or updated.
LastDataSourceName	<i>Type:</i> text (max 128 characters). Key. Nullable
	A name that identifies where the discovery information came from (for example: physical location, server, and so on).
LastDataSourceType	<i>Type</i> : text (max 32 characters). Key. Nullable
	The type of data source (for example: Excel, Fluke, NM, Text).

Database Column	Details
OpenPortsTCP	<i>Type:</i> text (max 512 characters). Nullable
	The comma-delimited list of TCP ports which were found to be open on scan.
OpenPortsUDP	<i>Type:</i> text (max 512 characters). Nullable
	The comma-delimited list of UDP ports which were found to be open on scan.
ScannedOperatingSystem	<i>Type:</i> text (max 512 characters). Nullable
	The IP scan tool's best guess at the operating system. This is based on corner cases in the behavior of the network protocol stack.
Scanned0sType	<i>Type:</i> text (max 512 characters). Nullable
	OS Type, as reported by scan tool.
ScannedOsVendor	<i>Type:</i> text (max 512 characters). Nullable
	OS Vendor, as reported by scan tool.
ScannedOsFamily	<i>Type:</i> text (max 512 characters). Nullable
	OS family, as reported by scan tool.
ScannedOsGen	<i>Type:</i> text (max 512 characters). Nullable
	OS Generation (Versions), as reported by scan tool.
ScannedMacAddress	<i>Type:</i> text (max 64 characters). Nullable
	MAC Address, as reported by scan tool.
ScannedMacVendor	<i>Type:</i> text (max 512 characters). Nullable
	MAC Vendor, as reported by scan tool.
SQLDiscoveredBy	<i>Type:</i> text (max 128 characters). Nullable
	The discovery tool used to discover SQL Server.
SQLPorts	<i>Type:</i> text (max 128 characters). Nullable
	The ports where SQL Server has been discovered.
IPAddressInt	<i>Type:</i> big integer. Key. Nullable
	Integer representation of IPAddress column.

DiscoveredDeviceCalculatedMember Table

Stores summary strings of DiscoveredDevice details that are expensive to calculate on demand.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 278: Database columns for DiscoveredDeviceCalculatedMember table

Database Column	Details
DeviceID	<i>Type</i> : integer. Key
	Device identity number.
IsOracle	<i>Type</i> : boolean. Nullable
	Have we discovered Oracle on this machine?
OracleListeners	<i>Type</i> : text (max 512 characters). Nullable
	A summary string representing any known Oracle Listeners, and the port they can be contacted on.
OracleServices	<i>Type</i> : text (max 512 characters). Nullable
	A summary string representing any known Oracle Services.
IsSQL	<i>Type:</i> boolean. Nullable
	Have we discovered SQL Server on this machine?
IsVDI	<i>Type:</i> boolean. Nullable
	Is this machine a virtual desktop?
IsVDIBroker	<i>Type</i> : boolean. Nullable
	Have we discovered a VDI broker on this machine?

DiscoveredDeviceParent Table

Records any parent-child relationships between DiscoveredDevice records.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 279: Database columns for DiscoveredDeviceParent table

Database Column	Details
DeviceID	<i>Type:</i> integer. Key The child DiscoveredDevice ID

Database Column Details

ParentDeviceID Type: integer. Key

The parent DiscoveredDevice ID

DiscoveredDeviceSNMPInfo Table

Records any SNMP information discovered for a DiscoveredDevice.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 280: Database columns for DiscoveredDeviceSNMPInfo table

Database Column	Details
DeviceID	<i>Type:</i> integer. Key
	Device identity number.
SNMP_snmpCommunityString	<i>Type:</i> text (max 256 characters). Nullable
	The SNMP Community String that was used for obtaining SNMP MIBs. This and all following SNMP attributes are defined in RFC1907 and others available from the IETF websites.
SNMP_sysDescr	<i>Type:</i> text (max 256 characters). Nullable
	A textual description of the device. This value should include the full name and version identification of the system's hardware type, software operating- system, and networking software.
SNMP_sysObjectID	<i>Type:</i> text (max 256 characters). Nullable
	The vendor's authoritative identification of the network management
	subsystem contained in the entity. This value is allocated within the SMI enterprises subtree (1.3.6.1.4.1) and provides an easy and unambiguous means for determining 'what kind of device' is being managed. For example, if vendor 'Flintstones, Inc.' was assigned the subtree 1.3.6.1.4.1.4242, it could assign the identifier 1.3.6.1.4.1.4242.1.1 to its 'Fred Router'.
SNMP_sysObjectIDSymbolic	<i>Type:</i> text (max 256 characters). Nullable
	The symbolic representation of the same value as sysObjectID.
SNMP_sysUpTime	<i>Type:</i> big integer. Nullable
	The time (in hundredths of a second) since the network management portion of the system was last re-initialized.

Database Column	Details
SNMP_sysContact	<i>Type:</i> text (max 256 characters). Nullable
	The textual identification of the contact person for this managed node, together with information on how to contact this person.
SNMP_sysName	<i>Type:</i> text (max 256 characters). Nullable
	An administratively-assigned name for this managed node. By convention, this is the node's fully-qualified domain name.
SNMP_sysLocation	<i>Type:</i> text (max 256 characters). Nullable
	The physical location of this node (for example, 'telephone closet, 3rd floor').
SNMP_sysServices	<i>Type:</i> integer. Nullable
	A bitmask indicating at which of the seven OSI protocol levels the system provides services (physical=1, TCP = 8, applications = 64, etc).
SNMP_ipForwarding	<i>Type:</i> integer. Nullable
	Set to 1 if the device forwards IP packets, 2 otherwise.

DiscoveredDeviceVDIBrokerInfo Table

Maps a DiscoveredDevice to a VDI site and broker type.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 281: Database columns for D	iscoveredDeviceVDIBrokerInfo table
-----------------------------------	------------------------------------

Database Column	Details
DeviceID	<i>Type:</i> integer. Key Device identity number. Foreign key to the DiscoveredDevice table.
VDISiteName	<i>Type:</i> text (max 256 characters). Key. Nullable The site to which this VDI broker belongs.
BrokerType	<i>Type:</i> text (max 256 characters). Key The type of VDI broker found.

DiscoveredDeviceVDIInfo Table

Records any VDI information discovered for a DiscoveredDevice.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 282: Database columns for DiscoveredDevid	ceVDIInfo table
---	-----------------

Database Column	Details
DeviceID	<i>Type:</i> integer. Key
	Device identity number.
VDIGroupName	<i>Type:</i> text (max 256 characters). Nullable
	The Desktop Group to which this VDI belongs.
VDITemplateName	<i>Type:</i> text (max 256 characters). Nullable
	The template from which this VDI device was cloned.
VDISiteName	<i>Type:</i> text (max 256 characters). Key. Nullable
	The site to which this VDI belongs.
BrokerType	<i>Type:</i> text (max 256 characters). Key. Nullable
	The type of broker that serves up this VDI.
BrokerMachineName	<i>Type:</i> text (max 64 characters). Nullable
	NetBIOS name for the VDI broker.
BrokerDomainName	<i>Type:</i> text (max 256 characters). Nullable
	NT domain name of the broker.
BrokerIPAddress	<i>Type:</i> text (max 256 characters). Nullable
	The IP of the broker.
IsPersistent	<i>Type:</i> boolean
	Whether or not the VDI device is a persistent one.

DiscoveredDeviceVirtualizationInfo Table

Records any virtualization server information discovered for a DiscoveredDevice.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
DeviceID	<i>Type:</i> integer. Key
	Device identity number.
Protocol	<i>Type:</i> text (max 16 characters). Nullable
	The protocol by which the virtualization API is accessed on the device.
Port	<i>Type</i> : integer
	The TCP port used by the protocol.
АРІТуре	<i>Type:</i> text (max 32 characters). Nullable
	The reported API type.
APIVersion	<i>Type</i> : text (max 16 characters). Nullable
	The supported version of the API.
ProductNameID	<i>Type:</i> integer
	The reported product name.
ProductVersion	<i>Type:</i> text (max 16 characters). Nullable
	The reported product version.

Table 283: Database columns for DiscoveredDeviceVirtualizationInfo table

KnownOracleListener Table

Records any discovered Oracle listeners that a DiscoveredDevice is providing.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 284: Database columns for KnownOracleListener table

Database Column	Details
KnownOracleListenerID	<i>Type:</i> integer. Key. Generated ID Unique id for the known listener.
DeviceID	<i>Type:</i> integer. Key Device identity number. Foreign key to the DiscoveredDevice table.
Port	<i>Type</i> : integer. Key Port for this listener.

Database Column	Details
Name	Type: text (max 128 characters)
	The name of the service provided by the device.
Version	Type: text (max 32 characters)
	The version of the service provided by the device.
ManuallyAdded	<i>Type:</i> boolean
	Boolean field specifying whether the KnownService record has been manually added by the user.
DiscoveredRemotely	<i>Type:</i> boolean
	True means this listener is discovered using remote discovery, false otherwise.
DiscoveredLocally	<i>Type:</i> boolean
	True means this listener is discovered using local discovery, false otherwise.
DiscoveredViaTNSNames	<i>Type:</i> boolean
	True means this listener is discovered from a TNSNames file on an inventory beacon, false otherwise.

KnownOracleService Table

Records any discovered Oracle services (databases) on a DiscoveredDevice.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 285: Database columns for KnownOracleService table

Database Column	Details
KnownOracleServiceID	<i>Type:</i> integer. Key. Generated ID
	Unique id for the known Oracle service.
KnownOracleListenerID	<i>Type:</i> integer. Key. Nullable
	Listener identity number.
DeviceID	<i>Type:</i> integer. Key
	Network device identity number. Foreign key to the DiscoveredDevice
	table.
Name	<i>Type:</i> text (max 128 characters). Key
	The name of the service provided by the device.

Database Column	Details
ManuallyAdded	<i>Type:</i> boolean
	Boolean field specifying whether the KnownService record has been manually added by the user.
DiscoveredRemotely	<i>Type:</i> boolean
	True means this service is discovered using remote discovery, false otherwise.
DiscoveredLocally	<i>Type</i> : boolean
	True means this service is discovered using local discovery, false otherwise.
DiscoveredViaTNSNames	<i>Type:</i> boolean
	True means this service is discovered from a TNSNames file on an inventory beacon, false otherwise.

Site Table

The Site table contains data about network locations (sites).

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 286: Database columns for Site table

Database Column	Details
SiteID	<i>Type:</i> integer. Key. Generated ID
	The ID for the site.
Name	<i>Type</i> : text (max 256 characters). Key
	The name of the site.
AutoPopulated	<i>Type:</i> boolean
	Specifies whether the row was populated automatically (1) or manually (0).
Enabled	<i>Type</i> : boolean
	Specifies whether the row will be used when mapping domains and devices to sites.

SiteSubnet Table

The SiteSubnet table contains data about subnets in a network location (or site).

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 287: Database columns for SiteSubnet table

Database Column	Details
SubnetID	<i>Type:</i> integer. Key. Generated ID
	The ID for the subnet.
IPSubnet	<i>Type:</i> text (max 64 characters). Key
	The IP address of the subnet, in human-readable dotted decimal notation (example: 172.16.254.1).
IPSubnetBits	<i>Type:</i> tiny integer. Key
	The number of bits in the CIDR routing prefix (in IPv4 terms, the subnet mask), expressed as a decimal number.
SiteID	<i>Type:</i> integer. Key
	SiteID of the site in which the Subnet resides. Foreign key to the Site table.
AutoPopulated	<i>Type:</i> boolean
	Specifies whether the row was populated automatically (1) or manually (0).
Enabled	<i>Type:</i> boolean
	Specifies whether the row will be used when mapping domains and devices to sites.
IPAddressRangeFrom	<i>Type:</i> big integer. Key
	The first IP address within the subnet, expressed as an integer. This value is automatically calculated when the record is created.
IPAddressRangeTo	<i>Type:</i> big integer. Key
	The last IP address within the subnet, expressed as an integer. This value is automatically calculated. (For an IPv4 address with a 32-bit subnet mask, this value is the same as the first IP address within the subnet, since this IP address identifies exactly one device.)

VirtualizationProductName Table

Stores unique virtualization server software names for a DiscoveredDevice.

Table 288: Database columns for VirtualizationProductName table

Database Column	Details
VirtualizationProduct NameID	<i>Type</i> : integer. Key. Generated ID Device identity number.
ProductName	<i>Type:</i> text (max 256 characters). Key The reported product name.

Compliance.Logic.Licensing Tables

The complete set of database tables documented here includes:

AccessEvidence Table

AccessEvidence lists software access evidence that is used to identify that a particular item of software (defined in the SoftwareTitle table) has been accessed on a computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
AccessEvidenceID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for an software access evidence record.
DisplayName	<i>Type:</i> text (max 256 characters). Key
	The display name of the software as reported by the software access evidence.
Version	<i>Type:</i> text (max 72 characters). Key
	The version of the software as reported by the software access evidence.
Edition	<i>Type:</i> text (max 50 characters). Key
	The edition of the software as reported by the software access evidence.
Publisher	<i>Type:</i> text (max 200 characters). Key
	The publisher of the software as reported by the installer evidence.
OperatorManageStateID	<i>Type:</i> integer. Key
	The management responsibility for this information. Foreign key to the OperatorManageState table.
Ignored	<i>Type:</i> boolean
	Set this field to True if the access evidence is not used for application
	recognition.
IsShared	<i>Type</i> : boolean

Table 289: Database columns for AccessEvidence table

AccessEvidenceEx Table

The AccessEvidenceEx table contains additional information on the access evidence managed by FlexNet Manager Suite.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 290: Database columns for AccessEvidenceEx table

Database Column	Details
AccessEvidenceID	<i>Type</i> : integer. Key A unique identifier for an access evidence record.
OperatorManageStateID	<i>Type</i> : integer. Nullable The management responsibility for this information. Foreign key to the OperatorManageState table.
Ignored	<i>Type</i> : boolean. Nullable Set this field to True if the access evidence is not used for application recognition.

AccessEvidenceMatchCount Table

AccessEvidenceMatchCount tracks the number of times that each access evidence (rule) has been detected as installed and recorded in the data source. A separate count is kept for each access evidence rule, and for each data source.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 291: Database columns for AccessEvidenceMatchCount table

Database Column	Details
AccessEvidenceMatch CountID	<i>Type:</i> integer. Key. Generated ID A synthetic unique identifier is required, since ComplianceConnectionID, being nullable, cannot be included in the primary key.
AccessEvidenceID	<i>Type:</i> integer. Key The access evidence which is being matched. Foreign key to the AccessEvidence table.

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The data source where the match is occurring. Foreign key to the ComplianceConnection table.
MatchedCount	<i>Type:</i> integer The number of installed access evidence records in this data source matching this access evidence rule.
InstallCount	<i>Type</i> : integer The number of physical application installations recognized in this data source using this access evidence rule.

AccessMode Table

The AccessMode table holds the available states an application can be considered accessed.

Table 292: Database	columns for	AccessMode table
---------------------	-------------	------------------

Database Column	Details
AccessModeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each AccessMode. Possible values and the corresponding default strings are:
	• 1 = Local
	• 2 = App-V
	• 3 = XenApp
	• 4 = XenDesktop
	• 5 = VMware View
	• 6 = Office 365
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an access mode. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the access mode resource string has no translation.

AccessedSoftware Table

AccessedSoftware lists all the access records of an application from a device.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 293: Database columns for AccessedSoftware table

Database Column	Details
AccessedSoftwareID	<i>Type:</i> big integer. Key. Generated ID
	A unique identifier for an accessed software record.
AccessingUserID	<i>Type:</i> integer. Key. Nullable
	An identifier for a accessing user record. Foreign key to the AccessingUser table.
AccessingDeviceID	<i>Type:</i> integer. Key. Nullable
	An identifier for a accessing device record. Foreign key to the AccessingDevice table.
SoftwareTitleID	<i>Type:</i> integer. Key
	The software that is being accessed. Foreign key to the SoftwareTitle table.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable
	The link to the license this access has been counted against. Foreign key to the SoftwareLicense table.
SoftwareLicense	<i>Type:</i> integer. Key. Nullable
AllocationID	The link to the license allocation this access has consumed. Foreign key to
	the SoftwareLicenseAllocation table.
ConsumedCount	<i>Type:</i> integer. Nullable
	The number of this installation consumed on the license.
IsLicensed	<i>Type:</i> boolean
	Set this field to True when this access is licensed.
LastAccessDate	<i>Type:</i> datetime. Nullable
	Last access date recorded for this software access.
LastInventoryDate	<i>Type:</i> datetime. Nullable
	Last time access inventory was collected for this software access.
PointsCalculated	<i>Type:</i> integer
	The number of calculated points this installation consumes.

AccessedSoftwareOccurrence Table

AccessedSoftwareOccurrence lists access occurrences for accessed software.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 294: Database columns for AccessedSoftwareOccurrence table

Database Column	Details
AccessedSoftwareID	<i>Type:</i> big integer. Key
	An identifier for an accessed software. Foreign key to the AccessedSoftware
ServerComputerID	<i>Type:</i> integer. Key
	An identifier for a server record. Foreign key to the ComplianceComputer table.
AccessDate	<i>Type:</i> datetime. Nullable
	Date on which access has occurred.
LicenseDate	<i>Type:</i> datetime. Key
	Date which will be used for licensing purposes.
InventoryDate	<i>Type:</i> datetime. Key
	Date on which access occurrence was recorded.
AccessCount	<i>Type</i> : integer
	Number of access occurrences on this date.

AccessingDevice Table

AccessingDevice stores information about devices which are accessing a software on the server.

Table 295: Database columns for AccessingDevice table

Database Column	Details
AccessingDeviceID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a AccessingDevice
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	An identifier for a compliance computer record. Foreign key to the
	ComplianceComputer table.
IPAddress	<i>Type:</i> text (max 256 characters). Key. Nullable
	IP address of the of the device.
ComputerName	<i>Type:</i> text (max 256 characters). Key. Nullable
	Computer name.
SerialNo	<i>Type:</i> text (max 100 characters). Nullable
	The serial number of the computer.
Domain	<i>Type:</i> text (max 100 characters). Nullable
	The domain name of the computer.

AccessingDeviceSnapshot Table

The AccessingDeviceSnapshot table lists all the snapshotted accessing devices.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 296: Database columns for AccessingDeviceSnapshot table

Database Column	Details
AccessingDeviceID	<i>Type:</i> integer. Key A unique identifier for a AccessingDevice.
ComplianceComputerID	<i>Type:</i> integer. Nullable An identifier for a compliance computer record. Foreign key to the ComplianceComputerSnapshot table.
IPAddress	<i>Type:</i> text (max 256 characters). Nullable IP address of the of the device.

Database Column	Details
ComputerName	<i>Type:</i> text (max 256 characters). Nullable Computer name.
LicenseMeasurementID	<i>Type:</i> integer. Key The snapshot ID. Foreign key to the LicenseMeasurement table.

AccessingUser Table

AccessingUser stores information about users which are accessing a software on the server.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 297: Database columns for AccessingUser table

Database Column	Details
AccessingUserID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a AccessingUser
ComplianceUserID	<i>Type</i> : integer. Key. Nullable
	An identifier for a compliance user record. Foreign key to the ComplianceUser table.
UserName	<i>Type</i> : text (max 256 characters). Key Username of the end user.
DomainName	<i>Type:</i> text (max 100 characters). Key. Nullable Domain name of the end user.

AccessingUserSnapshot Table

The AccessingUserSnapshot table lists all the snapshotted accessing users.

Table 298: Database columns for AccessingUserSnapshot table

Database Column	Details
AccessingUserID	<i>Type</i> : integer. Key
	A unique identifier for a AccessingUser.
ComplianceUserID	<i>Type</i> : integer. Nullable
	An identifier for a compliance user record. Foreign key to the
	ComplianceUserSnapshot table.
UserName	<i>Type</i> : text (max 256 characters)
	Username of the end user.
DomainName	<i>Type</i> : text (max 100 characters). Nullable
	Domain name of the end user.
LicenseMeasurementID	<i>Type</i> : integer. Key
	The snapshot ID. Foreign key to the LicenseMeasurement table.

ClientAccessSourceType Table

ClientAccessSourceType is a static table listing the types of client access source type that can be used to determine whether the evidence is collection from which source.

Database Column	Details
ClientAccessSourceTypeID	<pre>Type: integer. Key. Generated ID A unique identifier for each ClientAccessSourceType. Possible values and the corresponding default strings are: • 1 = Unknown • 2 = UAL • 3 = Exchange • 4 = Lync • 5 = SCCM • 6 = Manual • 7 = SharePoint • 8 = SaaS</pre>

Database Column	Details	
TypeResourceString	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a clinet access source type. Foreign key to the ComplianceResourceString table.	
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.	
ImporterString	<i>Type:</i> text (max 100 characters). Key The text value provided by adapters when importing client access source type.	

ClientAccessedAccessEvidence Table

ClientAccessedAccessEvidence lists access evidence from user and device that occurred on a server computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 300: Database columns for ClientAccessedAccessEvidence table

Database Column	Details			
ClientAccessedAccess	<i>Type:</i> big integer. Key. Generated ID			
EvidenceID	A unique identifier for a ClientAccessedAccessEvidence			
AccessEvidenceID	<i>Type</i> : integer. Key			
	An identifier for an access evidence record. Foreign key to the AccessEvidence table.			
AccessingUserID	<i>Type:</i> integer. Key. Nullable			
	An identifier for a accessing user record. Foreign key to the AccessingUser table.			
AccessingDeviceID	<i>Type:</i> integer. Key. Nullable			
	An identifier for a accessing device record. Foreign key to the			
	AccessingDevice table.			
ServerComputerID	<i>Type</i> : integer. Key			
	An identifier for a server record. Foreign key to the ComplianceComputer			
	table.			

Database Column	Details			
MaxAccessCount	<i>Type:</i> integer. Nullable			
	Maximum access count recorded for this evidence.			
LastAccessCount	<i>Type:</i> integer. Nullable			
	Last access count recorded for this evidence.			
LastAccessDate	<i>Type</i> : datetime. Nullable			
	Last access date recorded for this evidence.			
LastInventoryDate	<i>Type</i> : datetime. Nullable			
	Last time access inventory was collected for this evidence.			
ClientAccessSourceTypeID	<i>Type:</i> integer. Key			
	Referencing to the client access source type.			

ClientAccessedAccessOccurrence Table

ClientAccessedAccessOccurrence lists access occurrences for access evidence.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 301: Database columns for ClientAccessedAccessOccurrence table

Database Column	Details				
ClientAccessedAccess	<i>Type:</i> big integer. Key				
EvidenceID	An identifier for an accessed access evidence. Foreign key to the				
	ClientAccessedAccessEvidence				
AccessDate	<i>Type:</i> datetime. Nullable				
	Date on which access has occurred.				
InventoryDate	<i>Type:</i> datetime. Key				
	Date on which access occurrence was recorded.				
LicenseDate	<i>Type:</i> datetime. Key				
	Date which will be used for licensing purposes.				
AccessCount	<i>Type:</i> integer				
	Number of access occurrences on this date.				

Cluster Table

The Cluster table stores information about a logical group of computers which form a cluster.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 302: Database columns for Cluster table

Database Column	Details			
ClusterID	<i>Type:</i> integer. Key. Generated ID			
	A unique identifier for the cluster.			
ParentClusterID	<i>Type</i> : integer. Key. Nullable			
	An optional link back to a parent cluster.			
ExternalName	<i>Type</i> : text (max 256 characters). Nullable			
	The identifier of the cluster in the external cluster management system.			
Name	<i>Type</i> : text (max 256 characters). Key			
	The user-visible name of the cluster.			
Namespace	<i>Type</i> : text (max 256 characters). Key. Nullable			
	The name of the domain or datacenter containing the cluster.			
ClusterTypeID	<i>Type:</i> integer. Key			
	Foreign key to the ClusterType table.			
ComplianceComputer	<i>Type:</i> integer			
InventorySourceTypeID	Whether this cluster has ever been reported in inventory, or has been			
	manually created and maintained. Foreign key to the ComplianceComputerInventorySourceType table.			
InventoryDate	Type: datetime. Nullable			
	The date the computer last had inventory reported.			
UpdatedUser	<i>Type</i> : text (max 128 characters). Nullable			
opuaceuosei	The name of the operator who last updated the computer details.			
UpdatedDate	<i>Type</i> : datetime. Nullable			
ορατεαρατε	The date the record was last updated.			
CreationUser	<i>Type</i> : text (max 128 characters). Nullable			
	The operator who created the record.			
	· · · · · · · · · · · · · · · · · · ·			

Database Column	Details
CreationDate	<i>Type:</i> datetime The date the cluster was created.
InventoryAgent	<i>Type:</i> text (max 64 characters). Nullable The name of the person or tool that performed the last inventory.
DRS	<i>Type:</i> boolean. Nullable Whether Distributed Resource Scheduler (DRS) is enabled
DPM	<i>Type:</i> boolean. Nullable Whether Distributed Power Management (DPM) is enabled

ClusterComputer Table

The ClusterComputer table stores information about the relationship of computers to a cluster.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 303: Database columns for ClusterComputer table

Database Column	Details
ClusterComputerID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the cluster computer.
ClusterID	<i>Type</i> : integer. Key
	Foreign key to the Cluster table.
ComplianceComputerID	<i>Type:</i> integer. Key
	Foreign key to the ComplianceComputer table.
ClusterNodeTypeID	<i>Type:</i> integer
	Foreign key to the ClusterNodeType table.
ComplianceComputer	<i>Type</i> : integer
InventorySourceTypeID	Whether this cluster computer relationship has ever been reported in inventory, or has been manually created and maintained. Foreign key to the ComplianceComputerInventorySourceType table.

ClusterHostAffinityRule Table

The ClusterHostAffinityRule table stores rules that define whether there is affinity between different VM groups and host groups within a cluster.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details			
ClusterHostAffinityRuleID	<i>Type:</i> integer. Key. Generated ID			
	A unique identifier for each ClusterHostAffinityRule.			
ClusterHostAffinity	<i>Type:</i> integer			
RuleTypeID	A unique identifier indicating a type of Cluster Host Affinity Rule.			
Name	<i>Type:</i> text (max 256 characters). Key			
	The name assigned to an affinity rule.			
HostGroupClusterID	<i>Type:</i> integer			
	The unique identifier of the host group to which the affinity rule applies. Foreign key to the Cluster table.			
VMGroupClusterID	<i>Type:</i> integer			
	The unique identifier of the VM group to which the affinity rule applies. Foreign key to the Cluster table.			
ClusterID	<i>Type</i> : integer. Key			
	Foreign key to the Cluster table.			
ComplianceComputer	<i>Type</i> : integer			
InventorySourceTypeID	Whether this cluster host affinity rule has ever been reported in inventory, or has been manually created and maintained. Foreign key to the ComplianceComputerInventorySourceType table.			

Table 304: Database columns for ClusterHostAffinityRule table

ClusterHostAffinityRuleType Table

ClusterHostAffinityRuleType is a static table listing all of the types of cluster host affinity rules.

Database Column	Details				
ClusterHostAffinity	<i>Type:</i> integer. Key. Generated ID				
RuleTypeID	A unique identifier for each ClusterHostAffinityRuleType. Possible values and the corresponding default strings are:				
	 1 = must run on (VMs in the LHS group MUST run on hosts specified in the RHS group) 				
	• 2 = must not run on (VMs in the LHS group MUST NOT run on any of the hosts specified in the RHS group)				
ResourceName	<i>Type:</i> text (max 256 characters). Key				
	The unique name of the localizable resource string representing the type of a cluster host affinity rule. Foreign key to the ComplianceResourceString table.				
DefaultValue	<i>Type:</i> text (max 100 characters)				
	The text to display if the type resource string has no translation.				

Table 305: Database columns for ClusterHostAffinityRuleType table

ClusterNodeType Table

ClusterNodeType is a static table listing all of the roles a computer can have in a cluster.

Table 306: Database	columns for	ClusterNodeType	e table
---------------------	-------------	-----------------	---------

Details
<i>Type:</i> integer. Key. Generated ID
A unique identifier for each ClusterNodeType. Possible values and the corresponding default strings are:
 1 = Active (a node that is powered on and in use.)
• 2 = Passive (a node that is powered on but not in use unless an active node fails over to it)
• 3 = Hot (an active node–IBM nomenclature)
• 4 = Warm (a passive node–IBM nomenclature)
• 5 = Cold (a node that is powered off–IBM nomenclature)
<i>Type</i> : text (max 256 characters). Key
The unique name of the localizable resource string representing a cluster node type. Foreign key to the ComplianceResourceString table.

Database Column	Details
DefaultValue	Type: text (max 100 characters)
	The text to display if the type resource string has no translation.

ClusterType Table

ClusterType is a static table listing all of the types of a cluster.

Table 307: Database columns for ClusterType table

Database Column	Details
ClusterTypeID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for each ClusterType. Possible values and the corresponding default strings are:
	• 1 = vMotion (a mobility cluster based on VMWare ESX technology)
	 2 = Hyper-V (a mobility cluster based on Microsoft's Hyper-V virtualization technology)
	• 5 = Oracle VM (a cluster based on Oracle VM virtualization technology)
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a cluster type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.
XMLFile	<i>Type:</i> text. Nullable
	The layout of the property dialog for this type of cluster, stored in XML format.

ComplianceComputerSnapshot Table

The ComplianceComputerSnapshot table lists all the snapshotted computers.

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key
	The snapshotted ComplianceComputerID.
ComputerName	<i>Type:</i> text (max 256 characters). Nullable
	The snapshotted computer name.
Domain	<i>Type:</i> text (max 256 characters). Nullable
	The snapshotted computer domain name.
LocationID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The snapshotted LocationID.
BusinessUnitID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The snapshotted BusinessUnitID.
CostCenterID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The snapshotted CostCenterID.
CategoryID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The snapshotted CategoryID.
LicenseMeasurementID	<i>Type:</i> integer. Key
	The snapshot ID. Foreign key to the LicenseMeasurement table.

Table 308: Database columns for ComplianceComputerSnapshot table

ComplianceComputerTag Table

Reserved for future development.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 309: Database columns for ComplianceComputerTag table

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key Foreign key to the ComplianceComputer table
TagID	<i>Type:</i> integer. Key Foreign key to the Tag table.

ComplianceUserSnapshot Table

The ComplianceUserSnapshot table lists all the users for each snapshot.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceUserID	<i>Type:</i> integer. Key
	The snapshotted ComplianceUserID.
UserName	<i>Type:</i> text (max 256 characters). Nullable
	The snapshotted user name.
Domain	<i>Type:</i> text (max 256 characters). Nullable
	The snapshotted user domain name.
LocationID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The snapshotted LocationID.
BusinessUnitID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The snapshotted BusinessUnitID.
CostCenterID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The snapshotted CostCenterID.
CategoryID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The snapshotted CategoryID.
LicenseMeasurementID	<i>Type:</i> integer. Key
	The snapshot ID. Foreign key to the LicenseMeasurement table.

Table 310: Database columns for ComplianceUserSnapshot table

ComplianceUserTag Table

Reserved for future use.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

B

Table 311: Database columns for ComplianceUserTag table

Database Column	Details
ComplianceUserID	<i>Type:</i> integer. Key Foreign key to the ComplianceUser table.
TagID	<i>Type:</i> integer. Key Foreign key to the Tag table.

DatabaseMutex Table

The DatabaseMutex table lists all current database mutexes.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 312: Database columns for DatabaseMutex table

Database Column	Details
DatabaseMutexID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the database mutex.
Name	<i>Type:</i> text (max 256 characters). Key The name of the mutex.

EndOfSupportLife Table

Table 313: Database columns for EndOfSupportLife table

Database Column	Details
EndOfSupportLifeID	<i>Type:</i> integer. Key. Generated ID A unique identifier.
SoftwareLifeCycleID	<i>Type:</i> integer. Key The software life cycle this EOSL belongs to. Foreign key to the SoftwareLifeCycle table.
EndOfSupportLifeNameID	<i>Type:</i> integer. Key The name of the EOSL. Foreign key to the EndOfSupportLifeName table.

Database Column	Details
EndDate	<i>Type:</i> datetime. Nullable The support end date.
Notes	<i>Type</i> : text. Nullable Notes for this end of support life

EndOfSupportLifeName Table

Table 314: Database columns for EndOfSupportLifeName table

Database Column	Details
EndOfSupportLifeNameID	<i>Type:</i> integer. Key. Generated ID A unique identifier for EOSL name.
Name	<i>Type:</i> text (max 256 characters). Key The EOSL's name

EntitlementRecommendation Table

EntitlementRecommendation is a table listing all of the recommendations that have been made to link entitlements to licenses.

Table 315: Database columns for	EntitlementRecommendation table

Database Column	Details
Entitlement RecommendationID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this recommendation.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable The license affected by this recommendation, null if a new license is being created. Foreign key to the SoftwareLicense table.
SoftwareLicense DefinitionID	<i>Type</i> : integer. Key. Nullable The license defintion of the new license being created. Foreign key to the SoftwareLicenseDefinition table.

Database Column	Details
SoftwareLicenseDefinition	<i>Type:</i> text. Nullable
	Encrypted XML definition of the customised license being created if any.
MaintenanceDefinition	<i>Type:</i> text. Nullable
	Encrypted XML definition of the maintenance being applied to the license associated with this recommendation.
ContractID	<i>Type:</i> integer. Key. Nullable
	The contract affected by this recommendation, if any. Foreign key to the Contract table.
MaintenanceContractID	<i>Type:</i> integer. Nullable
	The contract providing maintenance for this recommendation, if any. Foreign key to the Contract table.
ProcessActionID	<i>Type:</i> integer. Key. Nullable
	The action that is recommended by this recommendation. Foreign key to the ProcessAction table.
Entitlement	<i>Type:</i> integer. Nullable
RecommendationStateID	The state that the recommendation is in. Foreign key to the EntitlementRecommendationState table.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.
DoTransferSoftware	<i>Type:</i> boolean. Nullable
LicenseAllocations	Indicates whether to transfer Group Assignments and Allocations when performing an upgrade and all the entitlements are transferred to the new license.

EntitlementRecommendationState Table

EntitlementRecommendationState is a static table listing all of the states a entitlement recommendation or transaction can be in.

Database Column	Details
Entitlement RecommendationStateID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each EntitlementRecommendationState. Possible values and the corresponding default strings are: • 1 = Automatically recommended
	 2 = Manually created
	• 3 = Edited by an operator
	• 4 = Accepted by an operator or automatically
	• 5 = Rolled back by an operator
	• 6 = Deferred by an operator
	• 7 = Failed to be accepted.
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing the entitlement recommendation's state. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 256 characters)
	The text to display if the state resource string has no translation.

Table 316: Database columns for EntitlementRecommendationState table

EntitlementTransaction Table

EntitlementTransaction is a table listing all of the recommendations that have been made to link entitlements to licenses.

Database Column	Details
EntitlementTransactionID	<i>Type</i> : integer. Key. Generated ID A unique identifier for this transaction.
Entitlement RecommendationID	<i>Type:</i> integer. Key. Nullable The recommendation this transaction is related to if any. Foreign key to the EntitlementRecommendation table.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable The license affected by this recommendation. If a new license is being created from a recommendation but the recommendation is pending, the value of this field is null. The license identified depends on the EntitlementTransactionType. For a recommendation, this could be the license being updated (the "from" license) or it could be the new license (the "to" license). Foreign key to the SoftwareLicense table.
PurchaseOrderDetailID	<i>Type:</i> integer. Key. Nullable The purchase order line associated with this transaction. Foreign key to the PurchaseOrderDetail table.
Adjustment	<i>Type:</i> integer. Nullable The (potentially partial) amount of the purchased license quantity that is being applied to the license.
OtherCandidates	<i>Type:</i> boolean. Nullable Whether there were other licenses which could have been recommended.
EntitlementTransaction TypeID	<i>Type:</i> integer. Nullable The type of the transaction. Foreign key to the EntitlementTransactionType table.
Entitlement RecommendationStateID	<i>Type:</i> integer. Key. Nullable The state that the transaction is in. Foreign key to the EntitlementRecommendationState table.
IsDeferred	<i>Type:</i> boolean Flags the entitlement transaction whether it is deferred for later processing.
TransactionUser	<i>Type:</i> text (max 128 characters). Nullable The operator who last updated the record.
TransactionDate	<i>Type:</i> datetime. Nullable The date the record was last updated.
PreviousMaintenance Definition	<i>Type:</i> text. Nullable Encrypted XML definition of the maintenance previously applied to the license associated with this transaction.
PreviousMaintenance ContractID	<i>Type:</i> integer. Nullable The ID of the contract previously giving maintenance to the license associated with this transaction. Foreign key to the Contract table.
LicenseNameMatched	<i>Type:</i> boolean Indicates whether or not there was a license name match.

Database Column	Details
PrimaryApplicationMatched	<i>Type:</i> boolean
	Indicates whether or not there was a primary application match.
AnyApplicationMatched	<i>Type</i> : boolean
	Indicates whether or not there was a match on any application.
MaintenanceSettings	<i>Type:</i> boolean
Matched	Indicates whether or not there was a match based on maintenance settings.
EnterpriseGroupMatched	<i>Type:</i> boolean
	Indicates whether or not there was a match based on enterprise groups.
NumberOfVersionsDifferent	<i>Type:</i> integer
	Indicated the number of versions between the version being upgraded to from the version being upgraded from.
EntitlementTransaction	<i>Type:</i> integer
StateID	The state of the transaction. Foreign key to the
	EntitlementTransactionState table.
AdjustmentDefault	<i>Type</i> : integer. Nullable
	The default amount of the purchased license quantity that is being applied to the license.
AllowMaintenanceGap	<i>Type:</i> boolean
	Will determine if the end users will be alerted about a gap in maintenance for this purchase. If this is set to 0, then an alert will be generated if a gap is detected. if it is set to 1, then no alert will be generated.

EntitlementTransactionOtherCandidate Table

EntitlementTransactionOtherCandidate is a table listing all of the other possible license recommendations that have been made to for entitlements.

Database Column	Details
EntitlementTransaction	<i>Type:</i> integer. Key. Generated ID
OtherCandidateID	A unique identifier for this possible candidate.

Database Column	Details
EntitlementTransactionID	<i>Type:</i> integer. Key The entitlement the recommendation belongs to.
SoftwareLicenseID	<i>Type:</i> integer. Key The license affected by this recommendation.
UpgradeFrom	<i>Type:</i> boolean Indicates whether this license was a candidate to upgrade from or not.
LicenseNameMatched	<i>Type:</i> boolean Indicates whether or not there was a license name match.
PrimaryApplicationMatched	<i>Type:</i> boolean Indicates whether or not there was a primary application match.
AnyApplicationMatched	<i>Type:</i> boolean Indicates whether or not there was a match on any application.
MaintenanceSettings Matched	<i>Type:</i> boolean Indicates whether or not there was a match based on maintenance settings.
EnterpriseGroupMatched	<i>Type:</i> boolean Indicates whether or not there was a match based on enterprise groups.
NumberOfVersionsDifferent	<i>Type:</i> integer Indicated the number of versions between the version being upgraded to from the version being upgraded from.

EntitlementTransactionState Table

EntitlementTransactionState is a static table listing all of the states that can be associated with purchased entitlements.

Database Column	Details
EntitlementTransaction	<i>Type</i> : integer. Key. Generated ID
StateID	A unique identifier for each EntitlementTransactionState. Possible values and the corresponding default strings are:
	• 1 = Enabled
	• 2 = Disabled
	• 3 = Always enabled
	• 4 = Not contributing.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing the enabled state of the transaction. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 256 characters)
	The text to display if the type resource string has no translation.

Table 319: Database columns for EntitlementTransactionState table

EntitlementTransactionType Table

EntitlementTransactionType is a static table listing all of the types of transactions that can be performed associating purchased entitlements to a license.

Table 320: Database columns for EntitlementTransactionType table
--

EntitlementTransaction Type: integer. Key. Generated ID	
TypeID A unique identifier for each EntitlementTransactionType. Possible v and the corresponding default strings are: • 1 = Purchased entitlements added to license • 2 = Purchased entitlements removed from license • 3 = Purchased entitlements taken from this license for upgrade purp • 4 = Entitlements adjusted manually on the license. • 5 = Maintenance entitlements adjusted on the license. • 7 = Upgrade entitlements adjusted manually on the license.	purposes or

Database Column	Details
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing the type of transaction. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the type resource string has no translation.

EvidenceExistenceRule Table

EvidenceExistenceRule is a static table listing the rules to be applied to file evidence and its relationship to a software (application) title.

Table 321: Database columns for EvidenceExistenceRule table	Table 321: Database	columns for	EvidenceExistenceRule table
---	---------------------	-------------	-----------------------------

Database Column	Details
EvidenceExistenceRuleID	<i>Type:</i> integer. Key. Generated ID Unique identifier for each EvidenceExistenceRule. Possible values and the corresponding default strings are:
	 1 = Required (the file evidence must be present for the title to be considered installed)
	 2 = Not for recognition (not used for recognizing application installations the presence of this file evidence does not guarantee installation of the title)
	• 3 = Not allowed (if the file evidence is present, the title is not installed).
	• 4 = At least one (the presence of any of the file evidence identified this way is enough for the title to be considered installed).
RuleResourceString	<i>Type:</i> text (max 50 characters). Key
	The unique name of the localizable resource string representing an evidence rule. Foreign key to the ComplianceResourceString table.
RuleDefaultString	<i>Type:</i> text (max 100 characters)
	The text to display if the rule resource string has no translation.

EvidenceStatus Table

The collection of status values for installation evidence.

Table 322: Database columns for EvidenceStatus table

Database Column	Details
EvidenceStatusID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for an evidence status. Possible values (and associated default names) are:
	• 1 = Active
	• 2 = Inactive
	• 3 = Unassigned
	• 4 = Ignored
	• 5 = Assigned.
StatusResourceString	<i>Type:</i> text (max 50 characters). Key
	The name of the resource string containing the text to display on the user interface.
StatusDefaultString	<i>Type</i> : text (max 100 characters)
	The value to display if there is no resource string available for this status.

FNMEAFeature Table

FNMEAFeature records additional license features, associated with a specific license, that have been imported from FlexNet Manager for Engineering Applications.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 323: Database columns for FNMEAFeature table

Database Column	Details
FNMEAFeatureID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the FNM-EA feature record.
Name	<i>Type</i> : text (max 256 characters) Name of the feature.
Version	<i>Type</i> : text (max 60 characters). Nullable Version of the feature.

Database Column	Details
PublisherID	<i>Type</i> : integer. Nullable
	The publisher of the license associated with this feature. Foreign key to the Vendor table.
NumberPurchased	<i>Type</i> : integer
	The quantity of purchased feature entities.
NumberInstalled	<i>Type</i> : integer
	The quantity of software installations accounted for by this feature.
SoftwareLicense	<i>Type</i> : integer
ComplianceStatusID	The compliance status of the license associated with this feature. Defaults to Compliant. Foreign key to the SoftwareLicenseComplianceStatus table.

FNMEALicensedFeature Table

FNMEALicensedFeature associated imported FlexNet Manager for Engineering Applications features with software licenses.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 324: Database columns for FNMEALicensedFeature table

Database Column	Details
FNMEAFeatureID	<i>Type:</i> integer. Key The feature associated with a license. Foreign key to the FNMEAFeature table.
SoftwareLicenseID	<i>Type:</i> integer. Key The license associated with a feature. Foreign key to the SoftwareLicense table.
QuantityPerLicense	<i>Type:</i> integer The quantity of feature entitlements per associated license purchased.
ProductID	<i>Type:</i> text (max 256 characters). Key The external identifier of the product the linked feature is a part of.
ComplianceConnectionID	<i>Type:</i> integer. Key An identifier for the data source the product has been imported from.

FileEvidenceCompany Table

FileEvidenceCompany contains the company names appearing in the headers of files used as evidence that an application is installed.

Table 325: Database columns for FileEvidenceCompany table

Database Column	Details
FileEvidenceCompanyID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this company.
Company	<i>Type:</i> text (max 100 characters). Key The name of the company.

FileEvidenceEx Table

The FileEvidenceEx table contains additional information on the file evidence managed by FlexNet Manager Suite.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 326: Database columns for FileEvidenceEx table

Database Column	Details
FileEvidenceID	<i>Type</i> : integer. Key A unique identifier for an file evidence record.
OperatorManageStateID	<i>Type</i> : integer. Nullable The management responsibility for this information. Foreign key to the OperatorManageState table.
Ignored	<i>Type</i> : boolean. Nullable Set this field to True if the file evidence is not used for application recognition.

FileEvidenceFile Table

FileEvidenceFile contains the names of the files used as evidence that an application is installed.

Table 327: Database columns for FileEvidenceFile table

Database Column	Details
FileEvidenceFileID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the file.
FileName	<i>Type:</i> text (max 256 characters). Key The name of the file.

FileEvidenceLanguage Table

FileEvidenceLanguage contains the language names appearing in headers of files used as evidence that an application is installed.

Table 328: Database columns for FileEvidenceLanguage table

Database Column	Details
FileEvidenceLanguageID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this language.
Language	<i>Type:</i> text (max 200 characters). Key The name of the language.

FileEvidenceMatchCount Table

FileEvidenceMatchCount tracks the number of times that each file evidence (rule) has been detected as installed and recorded in the data source. A separate count is kept for each file evidence rule, and for each data source.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 329: Database columns for FileEvidenceMatchCount table

Database Column	Details
FileEvidenceMatchCountID	<i>Type:</i> integer. Key. Generated ID
	A synthetic unique identifier is required, since ComplianceConnectionID, being nullable, cannot be included in the primary key.

Database Column	Details
FileEvidenceID	<i>Type</i> : integer. Key The file evidence rule being matched. Foreign key to the NewFileEvidence table.
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The data source where the match is occurring. Foreign key to the ComplianceConnection table.
MatchedCount	<i>Type:</i> integer The number of installed files in this data source matching this file evidence rule.
InstallCount	<i>Type:</i> integer The number of physical application installations recognized in this data source using this file evidence rule.

FileEvidencePath Table

FileEvidencePath contains the file paths to files used as evidence that an application is installed.

Table 330: Database columns for FileEvidencePath table

Database Column	Details
FileEvidencePathID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this path.
FilePath	<i>Type:</i> text (max 400 characters). Key The content of the file path.

GroupSnapshot Table

The GroupSnapshot table lists all the snapshotted groups.

Database Column	Details
GroupID	<i>Type:</i> integer. Key
	The snapshotted GroupID.
GroupExID	<i>Type:</i> text (max 128 characters). Key
	The snapshotted GroupExID.
Path	<i>Type:</i> text (max 500 characters)
	The snapshotted Path.
LicenseMeasurementID	<i>Type:</i> integer. Key
	The snapshot ID. Foreign key to the LicenseMeasurement table.

Table 331: Database columns for GroupSnapshot table

ImporterRun Table

The ImporterRun table lists all previously run imports.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 332: Database columns for ImporterRun table

Database Column	Details
ImporterRunID	<i>Type</i> : integer. Key. Generated ID A unique identifier for the import run.
LicenseMeasurementID	<i>Type</i> : integer. Key. Nullable
	The LicenseMeasurementID if a license reconcile was performed. Foreign key to the LicenseMeasurement table.
StartDate	<i>Type</i> : datetime. Nullable
	The time the import was started.
EndDate	<i>Type</i> : datetime. Nullable
	The time the import was completed.

Database Column	Details
ImportSourcesAppliedDate	<i>Type:</i> datetime. Nullable If non-licensing writers ran and completed successfully, this field will be set to the date/time of their completion. In effect, it records the application of data from the importer staging tables in to the core tables. This is the case even if the record as a whole is marked as a failure, as the writers processing will have already completed.
Arguments	<i>Type:</i> text (max 1024 characters) The command line arguments to the import.
RunAs	<i>Type:</i> text (max 1024 characters) The user who performed the import.
Comment	<i>Type:</i> text (max 1024 characters). Nullable Comments related to the import.
EventLogSummaryID	<i>Type:</i> integer. Key. Nullable The EventLogSummaryID for the import. Foreign key to the EventLogSummary table.
Success	<i>Type:</i> boolean. Key. Nullable Determines whether the import completed successfully.

ImporterStepValidationIssue Table

The ImporterStepValidationIssue table lists any validation issues that occurred during an import, that the user may need to review.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 333: Database columns for ImporterStepValidationIssue table

Database Column	Details
ImporterStepValidation IssueID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the import validation.
ImporterRunID	<i>Type:</i> integer. Key Foreign key to the ImporterRun table.
ComplianceConnectionID	<i>Type</i> : integer. Key Foreign key to the ComplianceConnection table.

Database Column	Details
ProcedureName	<i>Type:</i> text (max 256 characters). Nullable
	The procedure that contains the issue.
StepName	<i>Type:</i> text (max 512 characters). Nullable
	The step that contains the issue.
RowSkipped	<i>Type:</i> boolean
	Source to object validatation issue specifing if row skipped.
ColErrorReason	<i>Type:</i> integer. Nullable
	Source to object validatation issue specifing reason for error on particular row.
ColumnName	<i>Type:</i> text (max 128 characters). Nullable
	Column name of the failed source to object validatation issue.
RowNumber	<i>Type:</i> big integer. Nullable
	Row number of the failed source to object validatation issue.
AffectedItem	<i>Type:</i> text (max 512 characters). Nullable
	An optional description for any further related item.
ImporterStepValidation	<i>Type:</i> integer. Nullable
IssueTypeID	Foreign key to the ImporterStepValidationIssueType table.
OccurrenceDate	<i>Type</i> : datetime. Nullable
	The time the issue was raised.

ImporterStepValidationIssueType Table

ImporterStepValidationIssueType is a static table listing all of the validation issues that can occur on a ComplianceConnection.

Table 334: Database columns for ImporterStepValidationIssueType table

Database Column	Details
ImporterStepValidation IssueTypeID	<i>Type</i> : integer. Key. Generated ID
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing the ImporterStepValidationIssueType record. Foreign key to the ComplianceResourceString table.

Database Column

Details

DefaultValue

Type: text (max 256 characters)

The text to display if the state resource string has no translation.

InstalledFileEvidence Table

InstalledFileEvidence lists file evidence that has been installed on a computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 335: Database columns for InstalledFileEvidence table

Database Column	Details
FileEvidenceID	<i>Type:</i> integer. Key An identifier for a file evidence record. Foreign key to the NewFileEvidence table.
ComplianceComputerID	<i>Type:</i> integer. Key The managed computer on which this evidence was found. Foreign key to the ComplianceComputer table.
AccessModeID	<i>Type:</i> integer. Key The state an application was considered accessed. Foreign key to the AccessMode table.

InstalledInstallerAttribute Table

InstalledInstallerAttribute installer evidence attributes that exist on a computer.

Database Column	Details
InstallerEvidenceID	<i>Type:</i> integer. Key An identifier for an installer evidence record. Foreign key to the InstallerEvidence table.

Database Column	Details
ComplianceComputerID	<i>Type</i> : integer. Key
	An identifier for a computer record. Foreign key to the ComplianceComputer table.
InstanceName	<i>Type</i> : text (max 256 characters). Key. Nullable
	The name of the instance on the computer where this installer evidence was found.
AttributeID	<i>Type</i> : integer. Key
	The installer evidence attribute. Foreign key to the Attribute table.
Value	<i>Type</i> : text
	The value of the attribute.

InstalledInstallerEvidence Table

InstalledInstallerEvidence lists installer evidence that has been installed on a computer.

Database Column	Details
InstallerEvidenceID	<i>Type</i> : integer. Key An identifier for an installer evidence record. Foreign key to the InstallerEvidence table.
ComplianceComputerID	<i>Type</i> : integer. Key An identifier for a computer record. Foreign key to the ComplianceComputer table.
InstanceName	<i>Type:</i> text (max 256 characters). Key. Nullable The name of the instance on the computer where this installer evidence was found.
InstallDate	<i>Type</i> : datetime. Nullable The install date of the installer evidence.
DiscoveryDate	<i>Type:</i> datetime. Nullable The date that the installer evidence was first seen.

Database Column	Details
AccessModeID	<i>Type:</i> integer. Key The state an application was considered accessed. Foreign key to the AccessMode table.
	Accessione lable.

InstalledInstanceReplacement Table

InstalledInstanceReplacement tracks the particular installations instances where a software suite replaced the installation record of its member application.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 338: Database columns for InstalledInstanceReplacement table

Database Column	Details
InstanceID	<i>Type</i> : integer. Key The installation instance of the software suite. Foreign key to the Instance table.
ReplacedSoftwareTitleID	<i>Type:</i> integer. Key Software title that has been replaced by its parent suite. Foreign key to the SoftwareTitle table.

InstalledSoftwareData Table

InstalledSoftware lists all the installations of an application (as defined in the SoftwareTitle table).

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 339: Database columns for InstalledSoftwareData table

Database Column	Details
InstalledSoftwareID	<i>Type:</i> integer. Key. Generated ID A unique identifier for an installed software record.

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key
	The computer on which the software is installed. Foreign key to the
	ComplianceComputer table.
SoftwareTitleID	<i>Type:</i> integer. Key
	The software that is installed. Foreign key to the SoftwareTitle table.
IsUsed	<i>Type:</i> boolean
	Set this field to True if the software title is installed according to usage
	thresholds in the SoftwareTitle table.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable
	The link to the license this install has been counted against. Foreign key to
	the SoftwareLicense table.
SoftwareLicense	<i>Type:</i> integer. Key. Nullable
AllocationID	The link to the license allocation this installation has consumed. Foreign key
	to the SoftwareLicenseAllocation table.
IsLicensed	<i>Type:</i> boolean
	Set this field to True when this installation is licensed.
PointsUsed	<i>Type:</i> integer. Nullable
	The number of points this installation consumes on a points-based license.
RawPointsUsed	<i>Type:</i> integer. Nullable
	The number of points this installation consumes on a points-based license
	before exemptions are considered.
InstallDate	<i>Type:</i> datetime. Nullable
	The install date of the software.
DiscoveryDate	<i>Type:</i> datetime. Key. Nullable
	The date that the software was first seen.
LastUsedDate	<i>Type:</i> datetime. Nullable
	The date that the software was last used.
PointsCalculated	<i>Type</i> : integer
	The number of calculated points this installation consumes.

InstalledSoftwareRemoval Table

InstalledSoftwareRemoval table keeps track of software titles that have been recognised, but then removed due to precedence. This is typically because a higher quality (more specific) title has been found.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 340: Database columns for InstalledSoftwareRemoval table

Database Column	Details
InstalledSoftwareID	<i>Type</i> : integer. Key Installation record for lower quality title. Foreign key to the InstalledSoftware table.
RemovedSoftwareTitleID	<i>Type</i> : integer. Key Software title whose installation is now being ignored due to the presence of a higher quality title. Foreign key to the SoftwareTitle table.

InstalledSoftwareReplacement Table

InstalledSoftwareReplacement tracks which individual application installation records have (ever) been subsumed by recognition of their parent software suite installed on the same computer. Only the suite and its member application are linked here.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 341: Database columns for InstalledSoftwareReplacement table

Database Column	Details
InstalledSoftwareID	<i>Type</i> : integer. Key The suite's installation record. Foreign key to the InstalledSoftware table.
ReplacedSoftwareTitleID	<i>Type</i> : integer. Key The software title that has been replaced by its parent suite. Foreign key to the SoftwareTitle table.

InstalledSoftwareUsageData Table

InstalledSoftwareUsage records the end-users who are using a piece of software installed on a computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
InstalledSoftwareUsageID	<i>Type:</i> integer. Key. Generated ID
	The unique identifier for this record.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	The end-user using the application. Foreign key to the ComplianceUser table.
SoftwareLicenseID	<i>Type</i> : integer. Nullable
	The license that covers this installation. Foreign key to the SoftwareLicense table.
SoftwareLicense	<i>Type:</i> integer. Key. Nullable
AllocationID	A link to any individual allocation that this installation consumes. Foreign key to the SoftwareLicenseAllocation table.
IsLicensed	<i>Type</i> : boolean
	Set this field to True if this usage is licensed.
UsageSessions	<i>Type:</i> integer
	The number of sessions for (or times that the application was used by) this end-user on this computer.
UsageActiveTime	<i>Type</i> : integer
	The amount of time this application was in active use (in the foreground) for this end-user on this computer.
ComplianceComputerID	<i>Type</i> : integer. Key
	The application. Foreign key to the ComplianceComputer table.
SoftwareTitleID	<i>Type</i> : integer. Key
	The application. Foreign key to the SoftwareTitle table.
LastUsedDate	<i>Type</i> : datetime. Nullable
	The date that the installed software was last used.
AccessModeID	<i>Type:</i> integer. Key
	The date that the installed software was last used.

Table 342: Database columns for InstalledSoftwareUsageData table

InstalledWMIEvidence Table

InstalledWMIEvidence lists WMI evidence that has been installed on a computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 343: Database columns for InstalledWMIEvidence table

Database Column	Details
WMIEvidenceID	<i>Type:</i> integer. Key
	An identifier for a WMI evidence record. Foreign key to the WMIEvidence
	table.
ComplianceComputerID	<i>Type:</i> integer. Key
	An identifier for a computer record. Foreign key to the
	ComplianceComputer table.
AccessModeID	<i>Type:</i> integer. Key
	The state an application was considered accessed. Foreign key to the
	AccessMode table.
InstanceName	<i>Type:</i> text (max 256 characters). Key
	The name of the WMI class instance used in the source connection for the
	WMI evidence

InstallerEvidence Table

InstallerEvidence lists installer evidence that is used to identify that a particular item of software (defined in the SoftwareTitle table) has been installed on a computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 344: Database columns for InstallerEvidence table

Database Column	Details
InstallerEvidenceID	<i>Type:</i> integer. Key. Generated ID A unique identifier for an installer evidence record.
InstallerEvidenceTypeID	<i>Type:</i> integer. Key Identifies the type of installer evidence. Defaults to MSI. Foreign key to the InstallerEvidenceType table.

Database Column	Details
DisplayName	<i>Type:</i> text (max 256 characters). Key
	The display name of the software as reported by the installer evidence.
Version	<i>Type:</i> text (max 72 characters). Key
	The version of the software as reported by the installer evidence.
Publisher	<i>Type:</i> text (max 200 characters). Key
	The publisher of the software as reported by the installer evidence.
OperatorManageStateID	<i>Type:</i> integer. Key
	The management responsibility for this information. Foreign key to the
	OperatorManageState table.
Ignored	<i>Type:</i> boolean
	Set this field to True if the installer evidence is not used for application
	recognition.
IsShared	<i>Type</i> : boolean

InstallerEvidenceEx Table

The InstallerEvidenceEx table contains additional information on the installer evidence managed by FlexNet Manager Suite.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
InstallerEvidenceID	<i>Type:</i> integer. Key A unique identifier for an installer evidence record.
OperatorManageStateID	<i>Type</i> : integer. Nullable The management responsibility for this information. Foreign key to the OperatorManageState table.
Ignored	<i>Type</i> : boolean. Nullable Set this field to True if the installer evidence is not used for application recognition.

Table 345: Database columns for InstallerEvidenceEx table

InstallerEvidenceMatchCount Table

InstallerEvidenceMatchCount tracks the number of times that each installer evidence (rule) has been detected as installed and recorded in the data source. A separate count is kept for each installer evidence rule, and for each data source.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
InstallerEvidenceID	<i>Type:</i> integer. Key
	The installer evidence which is being matched. Foreign key to the
	InstallerEvidence table.
ComplianceConnectionID	<i>Type:</i> integer. Key
	The data source where the match is occurring. Foreign key to the
	ComplianceConnection table.
MatchedCount	<i>Type:</i> integer
	The number of installed installer evidence records in this data source
	matching this installer evidence rule.
InstallCount	<i>Type:</i> integer
	The number of physical application installations recognized in this data
	source using this installer evidence rule.

Table 346: Database columns for InstallerEvidenceMatchCount table

InstallerEvidenceType Table

InstallerEvidenceType is a static table listing the types of installer evidence that can be used to determine whether an item of software has been installed.

Table 347: Database columns for InstallerEvidenceType table

Database Column	Details
InstallerEvidenceTypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each InstallerEvidenceType. Possible values and the corresponding default strings are:
	• 1 = Any
	• 2 = Add/Remove Programs
	• 3 = Software ID Tag
	• 4 = MSI
	• 5 = Unknown
	• 6 = ILMT
	• 7 = RPM
	• 8 = OS X App
	• 9 = LPP
	• 10 = SDUX
	• 11 = SUNPKG
	• 12 = IA
	• 13 = BEA
	• 14 = ISMP
	• 15 = IPS
	• 16 = ADDM
	• 17 = OracleEBSModule
	• 18 = BDNA
	• 19 = FlexeraID
	• 20 = DPKG
	• 21 = App-V
	• 22 = OUI
	• 23 = IIM
	• 24 = DSPMQ
	• 25 = VMware
	• 26 = HPUD

Database Column	Details
	• 27 = SaaS
	• 28 = UniversalApplication
TypeResourceString	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an installer evidence type. Foreign key to the ComplianceResourceString table.
TypeDefaultString	<i>Type</i> : text (max 100 characters)
	The text to display if the type resource string has no translation.
ImporterString	<i>Type:</i> text (max 100 characters)
	The text value provided by adapters when importing installer evidence.

LicenseBreachReason Table

LicenseBreachReason is a static table holding the collection of reasons why a license can be at risk.

Table 348: Database columns for LicenseBreachReason table

Database Column	Details
LicenseBreachReasonID	 Type: integer. Key. Generated ID A unique identifier for each LicenseBreachReason. Possible values and the corresponding default strings are: 1 = Installed Greater Than Purchased
	 2 = Child License At Risk
	 3 = Install Linked to License has Invalid Sockets 4 = Software License Does Not Meet Minimums
	 5 = Software License Has Expired
	 6 = Unlicensed Component Installed 7 = Peak Consumed Quantity Greater Than Purchased
	 8 = Nested License At Risk
	• 9 = Supplementary Product Exceeds Ratio.
BreachResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a risk reason. Foreign key to the ComplianceResourceString table.

Database Column	Details
BreachDefaultValue	<i>Type</i> : text (max 512 characters)
	The text to display if the reason resource string has no translation.

LicenseDefinitionTitle Table

LicenseDefinitionTitle associates software license definitions with their related applications.

Table 349: Database columns for LicenseDefinitionTitle table

Database Column	Details
SoftwareLicense DefinitionID	<i>Type</i> : integer. Key The license definition. Foreign key to the SoftwareLicenseDefinition table.
SoftwareRecognitionID	<i>Type:</i> text (max 100 characters). Key The encrypted FlexNet Manager Suite factory unique ID for the linked application in the Application Recognition Library.

LicenseDefinitionType Table

LicenseDefinitionType is a static table listing supported software license definition types, which are used to distinguish records downloaded from the Product Use Rights Library.

Database Column	Details
LicenseDefinitionTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a definition type. Possible values (and associated default names) are:
	• 1 = License
	• 2 = Product
	• 3 = Usage Right.
TypeName	<i>Type</i> : text (max 100 characters). Key
	Unique internal name for this definition type.

LicenseDefinitionUsageRight Table

LicenseDefinitionUsageRight associates software license definitions and Application Recognition Library software applications to recommended usage rights.

Database Column	Details		
LicenseDefinition	<i>Type:</i> text (max 100 characters). Key		
FactoryUID	The encrypted factory unique ID for a license definition or ARL application.		
UsageRightFactoryUID	<i>Type</i> : text (max 100 characters). Key		
	The encrypted factory unique ID for a usage right template.		
IsPrimary	<i>Type:</i> boolean		
	Is the software application a primary application to the recommended usage rights?		
IsBundle	<i>Type</i> : boolean		
	Is the recommended usage rights a bundle?		
IsRelatedByEdition	<i>Type</i> : boolean		
	Is the recommended usage rights is related to this primary application by the edition?		

LicenseMeasurement Table

The LicenseMeasurement table is used to store license measurement snapshots.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 352: Database columns for LicenseMeasurement table

Database Column	Details
LicenseMeasurementID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the license measurement.
MeasurementCode	<i>Type:</i> text (max 128 characters) The unique code for this measurement.
MeasurementTime	<i>Type:</i> datetime. Key The date and time this measurement was started.

Database Column	Details
MeasurementEndTime	<i>Type:</i> datetime. Nullable The date and time this measurement was completed.
Success	<i>Type:</i> boolean Determines whether the measurement completed successfully.
Description	<i>Type:</i> text (max 50 characters) The description of this measurement.
IsPartial	<i>Type</i> : boolean Indicate whether this licence run was a partial run or not.

LicenseSimulation Table

A LicenseSimulation is made up of an initial scenario, and a cloned version of this scenario. The user can modify the rows in this cloned scenario.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 353:	Database	columns	for	LicenseSimulation table
------------	----------	---------	-----	-------------------------

Database Column	Details
LicenseSimulationID	<i>Type:</i> integer. Key. Generated ID
	Unique ID for the LicenseSimulation table.
LicenseSimulation	<i>Type:</i> integer. Key
ScenarioID	Foreign key to the LicenseSimulationScenario table.
LastModified	<i>Type:</i> datetime
	The last time this simulation was modified.
ComplianceOperatorID	<i>Type</i> : integer. Key
	The compliance operator responsible for this scenario
DisplayName	<i>Type:</i> text (max 256 characters). Nullable
	The name given to this simulation by the owner/operator.
DisplayRateID	<i>Type:</i> integer. Nullable
	The rate to be used to display all price values in this simulation. Foreign key to the CurrencyRate table. If null, then the user's default can be used.

LicenseSimulationBreachStatus Table

LicenseSimulationBreachStatus is a static table listing all of the risk states a license can be in, once it is modelled in a Simulation.

Table 354: Database columns for LicenseSimul	ationBreachStatus table
--	-------------------------

Database Column	Details		
LicenseSimulation	<i>Type</i> : integer. Key. Generated ID		
BreachStatusID	A unique identifier for each LicenseSimulationBreachStatus. Possible values and the corresponding default strings are:		
	• 1 = Still compliant		
	• 2 = Still at risk		
	• 3 = Now compliant		
	• 4 = Now at risk.		
ResourceName	<i>Type:</i> text (max 256 characters). Key		
	The unique name of the localizable resource string representing risk status in a license simulation. Foreign key to the ComplianceResourceString table.		
DefaultValue	<i>Type:</i> text (max 100 characters)		
	The text to display if the type resource string has no translation.		

LicenseSimulationChangeType Table

LicenseSimulationChangeType is a static table listing all the types of operations that can be applied as changes to simulation data

Database Column	Details
LicenseSimulation	<i>Type</i> : integer. Key. Generated ID
ChangeTypeID	A unique identifier for each LicenseSimulationChangeType. Possible values and the corresponding default strings are:
	• 1 = Unchanged
	• 2 = Added
	• 3 = Deleted
	• 4 = Modified
	• 5 = Moved.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a computer role. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters)
	The text to display if the type resource string has no translation.

Table 355: Database columns for LicenseSimulationChangeType table

LicenseSimulationHWDetails Table

LicenseSimulationHWDetails stores a complete snapshot of hardware data for simulations. The LicenseSimulationScenario associated with each record could be an original snapshot of data, or a user modifiable scenario.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 356: Database columns for LicenseSimulationHWDetails table

Database Column	Details
LicenseSimulationHW DetailsID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a hardware item that is part of a simulation scenario.
LicenseSimulation ScenarioID	<i>Type</i> : integer. Key The simulation scenario this hardware item is part of. Foreign key to the LicenseSimulationScenario table.
Name	<i>Type:</i> text (max 256 characters). Nullable The friendly name for this hardware item.

Database Column	Details
LicenseSimulationRow	<i>Type:</i> integer
TypeID	The type of hardware for this item.
Manufacturer	<i>Type:</i> text (max 128 characters). Nullable
	The manufacturer of this hardware item. Typically applies to a virtualisation server.
ModelNo	<i>Type:</i> text (max 128 characters). Nullable
	The model number of this hardware item. Typically applies to a virtualisation server.
ChassisNumber	<i>Type:</i> text (max 128 characters). Nullable
	The chassis number of this hardware item. Typically applies to a virtualisation server.
SerialNo	<i>Type:</i> text (max 100 characters). Nullable
	The serial number of this hardware item. Typically applies to a virtualisation server or physical machine.
ProcessorType	<i>Type:</i> text (max 256 characters). Nullable
	The processor type of this hardware item.
MaxClockSpeed	<i>Type:</i> integer. Nullable
	The maximum clock speed of this hardware item.
PurchaseDate	<i>Type:</i> datetime. Nullable
	The date this hardware item was purchased on, if it has an associated Asset.
NumSockets	<i>Type:</i> integer. Nullable
	The number of physical CPU sockets of this hardware item.
PoolTypeID	<i>Type:</i> integer. Nullable
	The type of pool technology of this hardware item. Typically applies to resource pools. Foreign key to the VMPoolType table.
VMTypeID	<i>Type:</i> integer. Nullable
	The type of virtual machine technology of this hardware item. Typically applies to virtual machines. Foreign key to the VMType table.
OperatingSystem	<i>Type</i> : text (max 128 characters). Nullable
	The operating system running on this hardware item.
NumProcessors	<i>Type:</i> decimal. Nullable
	The number of processors available to this hardware item.
NumCores	<i>Type:</i> decimal. Nullable
	The number of cores available to this hardware item.

Database Column	Details
NumThreads	<i>Type:</i> integer. Nullable
	The number of threads available to this hardware item.
MaxNumberOfLogical	<i>Type:</i> decimal. Nullable
Processors	The configured maximum number of logical processors(ie, threads) for this hardware item, if applicable.
ParentLicense	<i>Type:</i> integer. Key. Nullable
SimulationHWDetailsID	The parent hardware item of this item.
HostLicenseSimulationH	<i>Type:</i> integer. Nullable
WDetailsID	The host hardware item of this item.
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	The actual computer record for this hardware item. Foreign key to the ComplianceComputer table.
VMLayerID	<i>Type</i> : integer. Key. Nullable
	Internal unique identifier used when populating hardware items to create a new simulation.
LicenseSimulation	<i>Type:</i> integer
ChangeTypeID	Tracks the state of the hardware item, as it gets modified by the simulation user. Foreign key to the LicenseSimulationChangeType table.
ClusterID	<i>Type:</i> integer. Nullable
	The hardware cluster to which this computer belongs, if any. Foreign key to the Cluster table.
AffinityEnabled	<i>Type:</i> boolean
	Whether this VM is locked to its current host computer.
CoreAffinity	<i>Type</i> : text (max 256 characters). Nullable
	Contains the Core Affinity value for virtual machine
CloudServiceProviderID	<i>Type:</i> integer. Key. Nullable
	The cloud service provider for the virtual machine

LicenseSimulationLicenseDetails Table

LicenseSimulationLicenseDetails stores properties associated with each license included in a simulation scenario. The LicenseSimulationScenario associated with each record could be an original snapshot of data, or a user modifiable scenario.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 357: Database columns for Lic	enseSimulationLicenseDetails table
-------------------------------------	------------------------------------

Database Column	Details
LicenseSimulation	<i>Type:</i> integer. Key. Generated ID
LicenseDetailsID	A unique identifier for a license item that is part of a simulation scenario.
OriginalLicense	<i>Type:</i> integer. Key. Nullable
SimulationLicense DetailsID	The original version of this license, that has not been modified by a simulation user.
LicenseSimulation	<i>Type:</i> integer. Key
ScenarioID	The simulation scenario this softare license is part of. Foreign key to the LicenseSimulationScenario table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The software license for this simulation license. Foreign key to the SoftwareLicense table.
UnitPrice	<i>Type:</i> currency. Nullable
	The unit price associated with this license.
UnitPriceRateID	<i>Type:</i> integer. Nullable
	The rate for the total value. Foreign key to the CurrencyRate table.
LicenseSimulation	<i>Type:</i> integer
ChangeTypeID	Tracks the state of the softare license, as it gets modified by the simulation user. Foreign key to the LicenseSimulationChangeType table.

LicenseSimulationResults Table

LicenseSimulationResults stores points consumed by each item in a simulation scenario against each license included in the simulation scenario.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 358: Database columns for LicenseSimulationResults table

Database Column	Details
LicenseSimulationHW	<i>Type:</i> integer. Key
DetailsID	The hardware item for this license simulation result. Foreign key to the LicenseSimulationHWDetails table.
LicenseSimulation	<i>Type:</i> integer. Key
ScenarioID	The scenario for this license simulation result. Foreign key to the LicenseSimulationScenario table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The software license for this license simulation result. Foreign key to the SoftwareLicense table.
InstalledCount	<i>Type:</i> decimal
	The number of processors/cores on which a software title licensed by the license is installed.
UsedCount	<i>Type:</i> decimal
	The number of processors/cores on which a software title licensed by the license is used.
CapacityCount	<i>Type</i> : decimal
	The number of processors/cores that apply to a software license under full capacity counting rules.
IsCapped	<i>Type:</i> boolean
	Does this layer implement hard partitioning for this license?
PointsFactor	<i>Type</i> : decimal
	The number of points consumed per processor/core on this computer for this license.
PointsConsumed	<i>Type:</i> decimal. Nullable
	The number of processor/core points required to cover the above InstalledCount.
PointsUsed	<i>Type:</i> decimal. Nullable
	The number of processor/core points required to cover the above UsedCount.
CapacityPointsConsumed	<i>Type:</i> decimal. Nullable
	The number of processor/core points required to cover the above CapacityCount.
PointsCalculated	<i>Type</i> : decimal
	The number of calculated points this installation consumes.

Database Column	Details
Overridden	<i>Type</i> : boolean Is this simulation result derived from an overridden consumption via allocation.

LicenseSimulationRowType Table

LicenseSimulationRowType is a static table listing all types of rows that can be displayed in the Simulation UI. Entries in the LicenseSimulationSWDetails table are assumed to be type 4 (Software installation)

Table 359: Database columns for LicenseSimulationRowType table
--

Database Column	Details
LicenseSimulationRow TypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each LicenseSimulationRowType. Possible values and the corresponding default strings are:
	 1 = Host 2 = Shared pool 3 = Virtual Machine
	 4 = Software installation 5 = Physical machine.
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing the type of a row in a license simulation. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

LicenseSimulationSWDetails Table

LicenseSimulationSWDetails stores a complete snapshot of software data for simulations. The LicenseSimulationHWDetails record associated with each LicenseSimulationSWDetails record could be part of an original snapshot of data, or a user modifiable scenario.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 360: Database columns for LicenseSimulationSWDetails table

Database Column	Details
LicenseSimulationSW	<i>Type:</i> integer. Key. Generated ID
DetailsID	A unique identifier for a software installation that is part of a simulation scenario.
LicenseSimulationHW	<i>Type:</i> integer. Key
DetailsID	The hardware item that this software title is installed on. Foreign key to the LicenseSimulationHwDetails table.
LicenseSimulation	<i>Type:</i> integer. Key
ScenarioID	The simulation scenario this softare installation is part of. Foreign key to the LicenseSimulationScenario table.
OriginalLicense	<i>Type:</i> integer. Key. Nullable
SimulationSWDetailsID	The original version of this software installation, that has not been modified by a simulation user.
Name	<i>Type:</i> text (max 512 characters)
	The friendly name of this software installation.
SoftwareTitleID	<i>Type:</i> integer. Key
	The software title that is installed here. Foreign key to the SoftwareTitle table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The software license that this install is assigned to. Foreign key to the SoftwareLicense table.
LicenseSimulation	<i>Type:</i> integer
ChangeTypeID	Tracks the state of the softare installation, as it gets modified by the simulation user. Foreign key to the LicenseSimulationChangeType table.
IsUsed	<i>Type:</i> boolean
	Set this field to True if the software title is installed according to usage thresholds in the SoftwareTitle table.

LicenseSimulationScenario Table

A LicenseSimulationScenario is a set of hardware and software inventory details that are recorded at a particular point in time. A scenario can be modifed by the user for the purposes of simulation.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 361: Database columns for LicenseSimulationScenario table

Database Column	Details
LicenseSimulation ScenarioID	<i>Type:</i> integer. Key. Generated ID Unique ID for the LicenseSimulationScenario table.
OriginalLicense SimulationScenarioID	<i>Type:</i> integer. Key. Nullable The original (unmodified) scenario that a user-modifiable scenario was based on

LicenseStatus Table

LicenseStatus is a static table storing the collection of possible license states.

Table 362: Database	columns for	LicenseStatus	table
---------------------	-------------	---------------	-------

Database Column	Details
LicenseStatusID	 Type: integer. Key. Generated ID A unique identifier for each LicenseStatus. Possible values and the corresponding default strings are: 1 = Active 2 = Retired 3 = In Stock
	 4 = Purchased 5 = Received.
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a license status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters) The text to display if the status resource string has no translation.

NewFileEvidence Table

NewFileEvidence identifies files used as evidence that an application (defined in the SoftwareTitle table) has been installed on a computer. File evidence may have wildcards, so each record in this table should be considered a rule, which one or more physical files on a computer may match.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
FileEvidenceID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a file evidence record.
FileEvidenceFileID	<i>Type:</i> integer. Key
	The file name. Foreign key to the FileEvidenceFile table.
FileEvidenceCompanyID	<i>Type:</i> integer. Key
	The company publishing the software. Foreign key to the
	FileEvidenceCompany table.
FileEvidencePathID	<i>Type</i> : integer. Key. Nullable
	The file path where the file was located. Foreign key to the
	FileEvidencePath table.
FileEvidenceLanguageID	<i>Type:</i> integer. Key. Nullable
	The language identified in the file header. Foreign key to the
	FileEvidenceLanguage table.
FileVersion	<i>Type:</i> text (max 100 characters). Key
	The version number of the file used as evidence of software installation.
ProductName	<i>Type:</i> text (max 200 characters). Nullable
	The product name in the file header.
ProductVersion	<i>Type:</i> text (max 200 characters). Nullable
	The product version number in the file header.
Description	<i>Type:</i> text (max 200 characters). Key
	The description in the file header.
FileSize	<i>Type:</i> integer. Key. Nullable
	The size of the file.

Table 363: Database columns for NewFileEvidence table

Database Column	Details
OperatorManageStateID	<i>Type</i> : integer. Key The management responsibility for this information. Foreign key to the OperatorManageState table.
Ignored	<i>Type</i> : boolean Set this field to True to indicate that this file evidence is ignored for application recognition.
IsShared	<i>Type</i> : boolean

OracleLegacyLicenseType Table

OracleLegacyLicenseType lists some of the legacy Oracle license types.

Database Column	Details
OracleLegacyLicenseTypeID	<pre>Type: integer. Key. Generated ID A unique identifier for each OracleLegacyLicenseType. Possible values and the corresponding default strings are: 1 = Named User</pre>
	• 2 = Named User Network license
	 3 = Named User Single Server 4 = Named User Multi Server
	• 5 = Concurrent Device
	• 6 = Concurrent Device Network License
	• 7 = UPU
	• 8 = Developer
	• 9 = Developer Network License
	• 10 = Concurrent User
	• 11 = Concurrent User Network License
	 12 = Application Specific Full User Licensing
	 13 = Embedded Software License 14 Site
	• 14 = Site.

Database Column	Details
OracleLegacyLicense TypeResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing an Oracle legacy license type. Foreign key to the ComplianceResourceString table.
OracleLegacyLicense TypeDefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

PODetailProcess Table

PODetailProcess records the processing steps taken when applying upgrades to software installations. The newly-purchased upgrade license is linked here to the original license being upgraded.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 365: Database columns	for PODetailProcess table
-----------------------------	---------------------------

Database Column	Details
PurchaseOrderDetailID	<i>Type</i> : integer. Key The purchase order line that defines this upgrade. Foreign key to the PurchaseOrderDetail table.
FromSoftwareLicenseID	<i>Type:</i> integer. Key. Nullable The original software license to which an upgrade is being applied. Foreign key to the SoftwareLicense table.
ToSoftwareLicenseID	<i>Type:</i> integer. Key. Nullable The upgrade license referenced in the PO line and permitting the installation of the software upgrade. Foreign key to the SoftwareLicense table.
ProcessActionID	<i>Type:</i> integer The processing action taken with respect to this upgrade. Defaults to Defer. Foreign key to the ProcessAction table.
ProcessStateID	<i>Type:</i> integer. Key The resulting process state of the upgrade. Foreign key to the ProcessState table.
CreationDate	<i>Type:</i> datetime The date this record was created.

PVUSoftwareLicenseProcessorData Table

This serves as an intermediate table during PVU reconciliation process to store the number of processors (or cores) on which licensed software is installed and used for each computer, and the calculated points.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable The host computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type:</i> integer. Key The license being assessed. Foreign key to the SoftwareLicense table.
PVUVirtualMachineLayerID	<i>Type:</i> integer. Key. Nullable The virtual machine layer under examination. Foreign key to the ReconcileVirtualMachineLayer table.
IsHost	<i>Type:</i> boolean. Key Does this refer to the top layer for this host?
IsCapped	<i>Type:</i> boolean Does this layer implement hard partitioning for this license?
InstalledCount	<i>Type</i> : decimal The number of processors/cores on which a software title licensed by the license is installed.
UsedCount	<i>Type:</i> decimal The number of processors/cores on which a software title licensed by the license is used.
CapacityCount	<i>Type:</i> decimal The number of processors/cores that apply to a software title licensed by the license under full capacity counting rules.
PointsFactor	<i>Type:</i> decimal The number of points consumed per processor/core on this computer.
InstalledPoints	<i>Type:</i> integer The number of processor/core points required to cover the above InstalledCount.

 Table 366: Database columns for PVUSoftwareLicenseProcessorData table

Database Column	Details
UsedPoints	<i>Type:</i> integer The number of processor/core points required to cover the above UsedCount.
CapacityPoints	<i>Type</i> : integer The number of processor/core points required to cover the above CapacityCount.
CalculatedConsumption	<i>Type</i> : integer The calculated consumption value for this license assignment before exemptions or overrides are considered.
Overridden	<i>Type</i> : boolean Whether this consumption value was the result of an override.

PVUVirtualMachineLayer Table

This serves as an intermediate table during PVU reconciliation process to store virtual machines, pools and hosts in a generalized tree structure.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 367: Database columns for PVUVirtualMachineLayer table

Database Column	Details
PVUVirtualMachineLayerID	<i>Type:</i> integer. Key
	A unique identifier for a hardware item that is part of a simulation scenario.
FNMPComputerUID	<i>Type:</i> unique identifier. Key. Nullable
	The unique identifier generated for the computer from the IM database. This property should only be populated by the ManageSoft inventory adapter.
ParentPVUVirtual	<i>Type:</i> integer. Key. Nullable
MachineLayerID	The parent hardware item of this item. Foreign key to the
	PVUVirtualMachineLayer table.
HostPVUVirtualMachine	<i>Type:</i> integer. Key. Nullable
LayerID	The host hardware item of this item. Foreign key to the
	PVUVirtualMachineLayer table.

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	The actual computer record for this hardware item. Foreign key to the ComplianceComputer table.
HostComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	The actual host computer record for this hardware item. Foreign key to the ComplianceComputer table.
ExternalID	<i>Type:</i> integer. Key. Nullable
	The identifier used in the source connection for the end-user.
PoolTypeID	<i>Type:</i> integer. Nullable
	The type of pool technology of this hardware item. Typically applies to resource pools. Foreign key to the VMPoolType table.
VMTypeID	<i>Type:</i> integer. Nullable
	The type of virtual machine technology of this hardware item. Typically applies to virtual machines. Foreign key to the VMType table.
VMPoolID	<i>Type:</i> integer. Nullable
	The resource pool that the virtual machine belongs to. Foreign key to the VMPool table.
VirtualMachineID	<i>Type:</i> integer. Nullable
	The identifier of this virtual machine. Foreign key to the VirtualMachine table.
ParentVMPoolID	<i>Type:</i> integer. Nullable
	The identifier of the parent VM pool of this pool. Foreign key to the VMPool table.
ClusterID	<i>Type:</i> integer. Nullable
	The hardware cluster to which this computer belongs, if any. Foreign key to the Cluster table.
Name	<i>Type:</i> text (max 256 characters). Nullable
	The friendly name for this hardware item.
LicenseSimulationRow	<i>Type:</i> integer
TypeID	The type of hardware for this item.
Manufacturer	<i>Type:</i> text (max 128 characters). Nullable
	The manufacturer of this hardware item. Typically applies to a virtualisation server.

Database Column	Details
ModelNo	<i>Type:</i> text (max 128 characters). Nullable
	The model number of this hardware item. Typically applies to a virtualisation server.
ChassisNumber	<i>Type:</i> text (max 128 characters). Nullable
	The chassis number of this hardware item. Typically applies to a virtualisation server.
SerialNo	<i>Type:</i> text (max 100 characters). Nullable
	The serial number of this hardware item. Typically applies to a virtualisation server or physical machine.
ProcessorType	<i>Type:</i> text (max 256 characters). Nullable
	The processor type of this hardware item.
MaxClockSpeed	<i>Type:</i> integer. Nullable
	The maximum clock speed of this hardware item.
PartialNumberOfProcessors	<i>Type:</i> decimal. Nullable
	The fractional processor count available to this layer.
PurchaseDate	<i>Type:</i> datetime. Nullable
	The date this hardware item was purchased on, if it has an associated Asset.
NumSockets	<i>Type:</i> integer. Nullable
	The number of physical CPU sockets of this hardware item.
OperatingSystem	<i>Type:</i> text (max 128 characters). Nullable
	The operating system running on this hardware item.
NumProcessors	<i>Type:</i> decimal. Nullable
	The number of processors available to this hardware item.
NumCores	<i>Type:</i> decimal. Nullable
	The number of cores available to this hardware item.
NumThreads	<i>Type:</i> integer. Nullable
	The number of threads available to this hardware item.
MaxNumberOfLogical	<i>Type:</i> decimal. Nullable
Processors	The configured maximum number of logical processors(ie, threads) for this hardware item, if applicable.
AffinityEnabled	<i>Type:</i> boolean
	Whether this VM is locked to its current host computer.

Database Column	Details
CoreAffinity	<i>Type:</i> text (max 256 characters). Nullable Contains the Core Affinity value for virtual machine
IsFlexNetInventory	<i>Type:</i> boolean. Nullable Whether this VM inventory was obtained from the FlexNet Manager agent.

PeriodType Table

PeriodType is a static table holding a collection of supported time periods to indicate the frequency of license charge-backs.

Table 368:	Database	columns	for	PeriodT	ype table
------------	----------	---------	-----	---------	-----------

Database Column	Details
PeriodTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each PeriodType. Possible values and the corresponding default strings are:
	• 1 = None
	• 2 = Weekly
	• 3 = Monthly
	• 4 = Quarterly
	• 5 = Yearly
	• 6 = Lump Sum.
PeriodTypeResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a period type. Foreign key to the ComplianceResourceString table.
PeriodTypeDefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.

ProcessAction Table

ProcessAction is a static table holding a collection of possible actions that can be applied while processing a SKU, with a special focus on processing software license upgrades.

Table 369: Database columns for ProcessAction table

Database Column	Details
ProcessActionID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each ProcessAction. Possible values and the corresponding default strings are:
	• 1 = Link to existing license
	• 2 = Create new from SKU
	• 3 = Create new from PO line
	 4 = Upgrade license: Link to existing license and upgrade from existing license
	 5 = Upgrade license: Link to existing license and select upgrade from license
	 6 = Upgrade license: Link to new license created from SKU and select upgrade from license
	• 7 = Remove from list
	 8 = Upgrade license: Link to new license created from PO line and select upgrade from license
	• 9 = Create new from SKU with fixed maintenance
	• 10 = Create new from PO line with fixed maintenance
	• 11 = Create new from SKU with unlimited maintenance
	• 12 = Create new from PO line with unlimited maintenance
	• 13 = Create new from SKU with maintenance from contract
	• 14 = Create new from PO line with maintenance from contract
	• 15 = Apply contract maintenance to an existing license
	• 16 = Apply fixed maintenance to an existing license
	• 17 = Apply unlimited maintenance to an existing license
	• 18 = Apply contract maintenance to an existing license by SKU
	• 19 = Apply fixed maintenance to an existing license by SKU
	• 20 = Apply unlimited maintenance to an existing license by SKU
	• 21 = Apply contract maintenance to a non-existent license for SKU
	• 22 = Apply fixed maintenance to a non-existent license for SKU
	• 23 = Apply unlimited maintenance to a non-existent license for SKU

Database Column	Details
	• 24 = Upgrade license: Link to existing license and upgrade from existing license with contract maintenance
	• 25 = Upgrade license: Link to existing license and upgrade from existing license with fixed maintenance
	• 26 = Upgrade license: Link to existing license and upgrade from existing license with unlimited maintenance
	• 27 = Upgrade license: Link to existing license and select upgrade from license with contract maintenance
	 28 = Upgrade license: Link to existing license and select upgrade from license with fixed maintenance
	 29 = Upgrade license: Link to existing license and select upgrade from license with unlimited maintenance
	 30 = Upgrade license: Link to new license created from SKU and select upgrade from license with contract maintenance
	 31 = Upgrade license: Link to new license created from SKU and select upgrade from license with fixed maintenance
	 32 = Upgrade license: Link to new license created from SKU and select upgrade from license with unlimited maintenance
	• 33 = Upgrade license: Link to new license created from PO line and select upgrade from license with contract maintenance
	• 34 = Upgrade license: Link to new license created from PO line and select upgrade from license with fixed maintenance
	• 35 = Upgrade license: Link to new license created from PO line and select upgrade from license with unlimited maintenance
	• 36 = Apply maintenance to a contract
	• 37 = No recommendation
	• 38 = Create a new license
	• 39 = Create a new license with a maintenance contract
	• 40 = Create a new license with fixed maintenance
	• 41 = Create a new license with unlimited maintenance
	• 42 = Add entitlements to a license

• 43 = Add entitlements to a license with a maintenance contract

Database Column	Details
	• 44 = Add entitlements to a license with fixed maintenance
	• 45 = Add entitlements to a license with unlimited maintenance
	• 46 = Upgrade to a new license
	• 47 = Upgrade to a new license with a maintenance contract
	• 48 = Upgrade to a new license with fixed maintenance
	• 49 = Upgrade to a new license with unlimited maintenance
	• 50 = Upgrade to an existing license
	• 51 = Upgrade to an existing license with a maintenance contract
	• 52 = Upgrade to an existing license with fixed maintenance
	• 53 = Upgrade to an existing license with unlimited maintenance
	• 54 = Apply maintenance from a contract to an existing license
	• 55 = Apply fixed maintenance to an existing license
	• 56 = Apply unlimited maintenance to an existing license
ProcessActionResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an action. Foreign key to the ComplianceResourceString table.
ProcessActionDefaultValue	<i>Type</i> : text (max 256 characters)
	The text to display if the action resource string has no translation.

ProcessState Table

ProcessState is a static table holding the collection of processing states that a purchase order line containing a SKU can be left in.

Table 370: Database columns for ProcessState table

Database Column	Details
ProcessStateID	 Type: integer. Key. Generated ID A unique identifier for each ProcessState. Possible values and the corresponding default strings are: 1 = Unprocessed 2 = Processed 3 = Deferred 4 = Discarded.
ProcessStateResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a processing state. Foreign key to the ComplianceResourceString table.
ProcessStateDefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the state resource string has no translation.

ReconcileAccessedSoftwareData Table

A list of all the accesses of an application, or item of software (as defined in the SoftwareTitle table).

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
AccessedSoftwareID	<i>Type:</i> big integer. Key
	A unique identifier for an accessed software record.
ServerComputerID	<i>Type</i> : integer. Key
	The server computer on which the software is available. Foreign key to the
	ComplianceComputer table.
AccessingUserID	<i>Type:</i> integer. Key. Nullable
	The user who accessed the software. Foreign key to the AccessingUser
	table.

Table 371: Database columns for ReconcileAccessedSoftwareData table

Database Column	Details
ComplianceUserID	<i>Type</i> : integer. Nullable
	The compliance user who accessed the software. Foreign key to the
	ComplianceUser table.
AccessingDeviceID	<i>Type:</i> integer. Key. Nullable
	The device from which the software is accessed. Foreign key to the
	AccessingDevice table.
ComplianceComputerID	<i>Type:</i> integer. Nullable
	The compliance computer from which the software is accessed. Foreign key to the ComplianceComputer table.
SoftwareTitleID	<i>Type:</i> integer. Key
	The software that is accessed. Foreign key to the SoftwareTitle table.
IsUsed	<i>Type:</i> boolean
	Set this field to True if the software title is accessed according to usage thresholds in the SoftwareTitle table.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable
	The link to the license this access has been counted against. Foreign key to the SoftwareLicense table.
SoftwareLicense	<i>Type:</i> integer. Key. Nullable
AllocationID	The link to the license allocation this access has consumed. Foreign key to
	the SoftwareLicenseAllocation table.
IsLicensed	<i>Type</i> : boolean
	Set this field to True when this access is licensed.
PointsUsed	<i>Type:</i> integer. Nullable
	The number of this accesses consumed on license.
LastUsedDate	<i>Type:</i> datetime. Nullable
	The last used date of the application by client.
PointsCalculated	<i>Type</i> : integer
	The number of calculated points this installation consumes.

ReconcileInstalledSoftwareData Table

A list of all the installations of an application, or item of software (as defined in the SoftwareTitle table).

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 372: Database columns for ReconcileInstalledSoftwareData table

Database Column	Details
InstalledSoftwareID	<i>Type</i> : integer. Key
	A unique identifier for an installed software record.
ComplianceComputerID	<i>Type:</i> integer. Key
	The computer on which the software is installed. Foreign key to the ComplianceComputer table.
SoftwareTitleID	<i>Type:</i> integer. Key
	The software that is installed. Foreign key to the SoftwareTitle table.
IsUsed	<i>Type:</i> boolean. Key
	Set this field to True if the software title is installed according to usage
	thresholds in the SoftwareTitle table.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable
	The link to the license this install has been counted against. Foreign key to the SoftwareLicense table.
SoftwareLicense	<i>Type:</i> integer. Key. Nullable
AllocationID	The link to the license allocation this installation has consumed. Foreign key to the SoftwareLicenseAllocation table.
IsLicensed	<i>Type:</i> boolean
	Set this field to True when this installation is licensed.
PointsUsed	<i>Type:</i> integer. Nullable
	The number of points this installation consumes on a points-based license.
RawPointsUsed	<i>Type</i> : integer. Nullable
	The number of points this installation consumes on a points-based license before exemptions are considered.
AccessModeID	<i>Type:</i> integer. Key
	The access mode that indicates why this computer was associated with this software title.
LastUsedDate	<i>Type:</i> datetime. Nullable
	The date of the installed software was last used.

Database Column

Details

PointsCalculated

Type: integer

The number of calculated points this installation consumes.

ReconcileInstalledSoftwareUsageData Table

This is a staging table for InstalledSoftwareUsage that is used during license reconciliation process, to store calculated values, and then bulk update the main table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	The end-user using the application. Foreign key to the ComplianceUser table.
SoftwareLicenseID	<i>Type</i> : integer. Nullable
	The license that covers this installation. Foreign key to the
	SoftwareLicense table.
SoftwareLicense	<i>Type</i> : integer. Key. Nullable
AllocationID	A link to any individual allocation that this installation consumes. Foreign key
	to the SoftwareLicenseAllocation table.
IsLicensed	<i>Type</i> : boolean
	Set this field to True if this usage is licensed.
UsageSessions	<i>Type</i> : integer
	The number of sessions for (or times that the application was used by) this
	end-user on this computer.
UsageActiveTime	<i>Type</i> : integer
	The amount of time this application was in active use (in the foreground) for
	this end-user on this computer.
ComplianceComputerID	<i>Type</i> : integer. Key
	The application. Foreign key to the ComplianceComputer table.
SoftwareTitleID	<i>Type</i> : integer. Key
	The application. Foreign key to the SoftwareTitle table.

Table 373: Database columns for ReconcileInstalledSoftwareUsageData table

Database Column	Details
LastUsedDate	<i>Type:</i> datetime. Nullable The last used date of the application.
AccessModeID	<i>Type:</i> integer. Key The date that the installed software was last used.

ReconcileInterestingBundleAccessComputer Table

A list of all computers with bundlable accesses for licenses that are interesting to the current execution of license reconcile.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key
	The unique identifier for a bundle software license that is interesting to an execution of reconcile.
AccessingDeviceID	<i>Type:</i> integer. Key. Nullable
	The unique identifier for a accessing device that could consume a bundle software license that is interesting to an execution of reconcile.
AccessingUserID	<i>Type:</i> integer. Key. Nullable
	The unique identifier of the accessing user that could consume a bundle software license that is interesting to an execution of reconcile.
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	The unique identifier for a computer that could consume a bundle software license that is interesting to an execution of reconcile.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	The unique identifier of the primary user for a computer that could consume a bundle software license that is interesting to an execution of reconcile.
NumProducts	<i>Type</i> : integer
	The number of products covered by this license that are accessed on this computer.

 Table 374: Database columns for ReconcileInterestingBundleAccessComputer table

ReconcileInterestingBundleInstallComputer Table

A list of all computers with bundlable installs for licenses that are interesting to the current execution of license reconcile.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key The unique identifier for a bundle software license that is interesting to an execution of reconcile.
ComplianceComputerID	<i>Type</i> : integer. Key The unique identifier for a computer that could consume a bundle software license that is interesting to an execution of reconcile.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable The unique identifier of the primary user for a computer that could consume a bundle software license that is interesting to an execution of reconcile.
NumProducts	<i>Type:</i> integer The number of products covered by this license that are installed on this computer.

Table 375: Database columns for ReconcileInterestingBundleInstallComputer table

ReconcileInterestingLicenses Table

A list of all licenses that are interesting to the current execution of license reconcile.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key The unique identifier for a software license that is interesting to an execution of reconcile.

ReconcileInterestingTitles Table

A list of all titles that are interesting to the current execution of license reconcile.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 377: Database columns for ReconcileInterestingTitles table

Database Column	Details
SoftwareTitleID	<i>Type:</i> integer. Key The unique identifier for a software title that is interesting to an execution of reconcile.

ReconcileSoftwareAccessDeviceLicensePointsConsumedData Table

This is a staging table for SoftwareAccessDeviceLicensePointsConsumed that is used during license reconciliation process, to store calculated values, and then bulk update the main table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 378: Database columns for ReconcileSoftwareAccessDeviceLicensePointsConsumedData table

Database Column	Details
AccessingDeviceID	<i>Type</i> : integer. Key. Nullable
	The accessing device under examination. Foreign key to the AccessingDevice table.
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	The compliance computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type</i> : integer. Key
	The license being assessed. Foreign key to the SoftwareLicense table.
LicensesUsed	<i>Type</i> : integer
	How many of the points consumed are for installations actually being used.

 Database Column
 Details

 CalculatedConsumption
 Type: integer

The calculated consumption value for this license assignment before exemptions or overrides are considered.

ReconcileSoftwareAccessUserLicensePointsConsumedData Table

This is a staging table for SoftwareAccessUserLicensePointsConsumed that is used during license reconciliation process, to store calculated values, and then bulk update the main table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
AccessingUserID	<i>Type:</i> integer. Key. Nullable
	The accessing user under examination. Foreign key to the AccessingUser table.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	The Compliance user under examination. Foreign key to the
	ComplianceUser table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license being assessed. Foreign key to the SoftwareLicense table.
LicensesUsed	<i>Type:</i> integer
	How many of the points consumed are for installations actually being used.
CalculatedConsumption	<i>Type:</i> integer
	The calculated consumption value for this license assignment before exemptions or overrides are considered.

Table 379: Database columns for ReconcileSoftwareAccessUserLicensePointsConsumedData table

ReconcileSoftwareLicenseComputerProblem Table

ReconcileSoftwareLicenseComputerProblem is a license reconciliation staging table for the SoftwareLicenseComputerProblemData table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 380: Database columns for ReconcileSoftwareLicenseComputerProblem table

Database Column	Details
SoftwareLicenseID	<i>Type</i> : integer. Key
	The software license. Foreign key to the SoftwareLicense table.
ComplianceComputerID	<i>Type:</i> integer. Key
	The computer consuming license entitlements. Foreign key to the
	ComplianceComputer table.
SoftwareLicense	<i>Type:</i> integer
ComputerProblemTypeID	The type of problem this computer's inventory causes for a given license. For example, core-based licenses require accurate inventory of processor core counts to determine ther compliance status.
	Foreign key to the SoftwareLicenseComputerProblemType table.

ReconcileSoftwareLicenseCoresConsumedData Table

This is a staging table for SoftwareLicenseCoresConsumedData that stores values calculated by license reconciliation. The main table is populated at the end of license reconciliation by a single bulk update.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 381: Database columns for ReconcileSoftwareLicenseCoresConsumedData table

Database Column	Details
ComplianceComputerID	<i>Type</i> : integer. Key The computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type</i> : integer. Key The license being assessed. Foreign key to the SoftwareLicense table.

Database Column	Details
CoresConsumed	<i>Type:</i> integer The number of cores that have contributed to license point consumption for the license on the computer.
CalculatedConsumption	<i>Type</i> : integer The calculated consumption value for this license assignment before exemptions or overrides are considered.

ReconcileSoftwareLicenseGroupPointsConsumedData Table

This serves as a staging table for SoftwareLicenseGroupPointsConsumed during reconciliation process.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license that owns the pre-calculated totals for a group. Foreign key to the SoftwareLicense table.
GroupTypeID	<i>Type:</i> integer. Key
	Type of the group(Location, Cost center, etc)
GroupExID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The group where the local and rolledup values are calculated. Foreign key to the GroupEx table.
RolledUpNumberConsumed	<i>Type:</i> integer
	The sum of points consumed of the current group and of all its child groups.
LocalNumberConsumed	<i>Type:</i> integer
	The sum of points consumed of the current group
RolledUpNumberUsed	<i>Type:</i> integer
	The sum of used points f the current group and of all its child groups.
LocalNumberUsed	<i>Type:</i> integer
	The sum of used points of the current group

Table 382: Database columns for ReconcileSoftwareLicenseGroupPointsConsumedData table

Database Column	Details
RolledUpNumberPurchased	<i>Type:</i> integer
	The rolled up purchase counts of the license.
LocalNumberPurchased	<i>Type:</i> integer
	The local purchase counts of the license
RolledUpNumberCalculated	<i>Type:</i> integer
	The sum of points calculated for the current group and of all its child groups.
LocalNumberCalculated	<i>Type:</i> integer
	The sum of points calculated for the current group.

ReconcileSoftwareLicenseILMTPointsConsumedData Table

This is a staging table for SoftwareLicenseILMTPointsConsumed that is used during license reconciliation process, to store calculated values, and then bulk update the main table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceComputerID	<i>Type</i> : integer. Key
	The computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license being assessed. Foreign key to the SoftwareLicense table.
CoreCount	<i>Type</i> : integer
	The number of licensable cores for the license on the computer.
PVUCount	<i>Type:</i> integer
	The number of PVU counts consumed for the license on the computer.
PeakPVUCount	<i>Type:</i> integer
	The number of PVU counts consumed for the license on the computer at the time where the peak for this license occurred.

Table 383: Database columns for ReconcileSoftwareLicenseILMTPointsConsumedData table

Database Column	Details
ProductCount	<i>Type:</i> integer The number of products that are consuming same license.
CalculatedConsumption	<i>Type:</i> integer The calculated consumption value for this license assignment before exemptions or overrides are considered.

ReconcileSoftwareLicensePointsConsumedData Table

This is a staging table for SoftwareLicensePointsConsumed that is used during license reconciliation process, to store calculated values, and then bulk update the main table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceComputerID	<i>Type</i> : integer. Key The computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type:</i> integer. Key The license being assessed. Foreign key to the SoftwareLicense table.
LicensesConsumed	<i>Type:</i> integer The number of entitlements (or points) consumed for the license on the computer.
CalculatedConsumption	<i>Type:</i> integer The calculated consumption value for this license assignment before exemptions or overrides are considered.
LicensesUsed	<i>Type:</i> integer How many of the points consumed are for installations actually being used.

Table 384: Database columns for ReconcileSoftwareLicensePointsConsumedData table

ReconcileSoftwareLicensePointsConsumedReason Table

This is a staging table for SoftwareLicensePointsConsumedReasonData that is used during license reconciliation process, to store calculated values, and then bulk update the main table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceComputerID	<i>Type</i> : integer. Key The computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type:</i> integer. Key The license being assessed. Foreign key to the SoftwareLicense table.
ReasonTypeID	<i>Type</i> : integer. Key The reason for the points to be consumed here. Foreign key to the SoftwareLicensePointsConsumedReasonType table.

 Table 385: Database columns for ReconcileSoftwareLicensePointsConsumedReason table

ReconcileSoftwareLicenseProcessorData Table

This serves as an intermediate table during reconciliation process to store the number of processors (or cores) on which licensed software is installed and used for each computer, and the calculated points.

Table 386: Database columns for ReconcileSoftwareLicenseProcessorData table	

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key The host computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type:</i> integer. Key The license being assessed. Foreign key to the SoftwareLicense table.

Database Column	Details
VMLayerID	<i>Type</i> : integer. Key. Nullable
	The virtual machine layer under examination. Foreign key to the ReconcileVirtualMachineLayer table.
IsHost	<i>Type</i> : boolean. Key
	Does this refer to the top layer for this host?
IsCapped	<i>Type</i> : boolean
	Does this layer implement hard partitioning for this license?
InstalledCount	<i>Type</i> : decimal
	The number of processors/cores on which a software title licensed by the license is installed.
UsedCount	<i>Type</i> : decimal
	The number of processors/cores on which a software title licensed by the license is used.
CapacityCount	<i>Type</i> : decimal
	The number of processors/cores that apply to a software title licensed by the license under full capacity counting rules.
PointsFactor	<i>Type</i> : decimal
	The number of points consumed per processor/core on this computer.
InstalledPoints	<i>Type</i> : integer
	The number of processor/core points required to cover the above InstalledCount.
UsedPoints	<i>Type</i> : integer
	The number of processor/core points required to cover the above UsedCount.
CapacityPoints	<i>Type</i> : integer
	The number of processor/core points required to cover the above CapacityCount.
CalculatedConsumption	<i>Type</i> : integer
	The calculated consumption value for this license assignment before exemptions or overrides are considered.
Overridden	<i>Type:</i> boolean
	Whether this consumption value was the result of an override.

ReconcileSoftwareLicenseSecondUseMappingData Table

This is a staging table for SoftwareLicenseSecondUseMapping that is used during license reconciliation process, to store calculated values, and then bulk update the main table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license conferring the right of second use. Foreign key to the
	SoftwareLicense table.
DesktopComputerID	<i>Type:</i> integer. Key
	The desktop or primary computer on which the related software in installed.
	Foreign key to the ComplianceComputer table.
SecondUseComputerID	<i>Type:</i> integer. Key
	The laptop or second computer covered by this license's right of second use,
	relative to the installation on the primary computer tracked in the previous
	field. Foreign key to the ComplianceComputer table.
TotalLicenseGrabs	<i>Type:</i> integer
	For internal use only. Temporary storage for calculations of overlapping
	second use and multiple install rights.
IsExternalRoamingLink	<i>Type:</i> boolean
	Is this a second use link or is it actually an 'external roaming' right?

 Table 387: Database columns for ReconcileSoftwareLicenseSecondUseMappingData table

ReconcileSoftwareUserLicensePointsConsumedData Table

This is a staging table for SoftwareUserLicensePointsConsumed that is used during license reconciliation process, to store calculated values, and then bulk update the main table.

Database Column	Details
ComplianceUserID	<i>Type:</i> integer. Key
	The end-user. Foreign key to the ComplianceUser table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license. Foreign key to the SoftwareLicense table.
LicensesConsumed	<i>Type:</i> integer
	The number of points (or entitlements) consumed for the license by the end-
	user.
LicensesUsed	<i>Type:</i> integer
	How many of the points consumed are for installations that are actually being used.
CalculatedConsumption	<i>Type:</i> integer
	The calculated consumption value for this license assignment before
	exemptions or overrides are considered.
LicenseMeasurementID	<i>Type:</i> integer. Key. Nullable
	The associated SAP license measurement snapshot, where appropriate.
	Foreign key to the LicenseMeasurement table.

Table 388: Database columns for ReconcileSoftwareUserLicensePointsConsumedData table

ReconcileVirtualMachineLayer Table

This serves as an intermediate table during reconciliation process to store virtual machines, pools and hosts in a generalized tree structure.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 389: Database columns for ReconcileVirtualMachineLayer table

Database Column	Details
VMLayerID	<i>Type:</i> integer. Key A unique identifier for a ReconcileVirtualMachineLayer.
HostComplianceComputerID	<i>Type</i> : integer. Key The host computer on which the layer resides, or the computer itself. Foreign key to the ComplianceComputer table.

Database Column	Details
VMPoolID	<i>Type:</i> integer. Key. Nullable
	The identifier of the virtual pool containing this VM, or the pool itself. Foreign key to the VMPool table.
VMPoolTypeID	<i>Type:</i> integer. Nullable
	The type of this VM pool. Foreign key to the VMPoolType table.
VirtualMachineID	<i>Type:</i> integer. Key. Nullable
	The identifier of this virtual machine. Foreign key to the VirtualMachine table.
VMTypeID	<i>Type:</i> integer. Nullable
	The type of this virtual machine. Foreign key to the VMType table.
ParentVMPoolID	<i>Type:</i> integer. Nullable
	The identifier of the parent VM pool of this pool. Foreign key to the VMPool table.
ParentVMLayerID	<i>Type:</i> integer. Key. Nullable
	The parent layer. Foreign key to the ReconcileVirtualMachineLayer table.
ComplianceComputerID	<i>Type</i> : integer. Key. Nullable
	The identifier of the computer running inside this virtual machine. Foreign key to the ComplianceComputer table.
Name	<i>Type:</i> text (max 256 characters). Nullable
	The name of the layer (host/pool/VM).
PartialNumberOfProcessors	<i>Type:</i> decimal. Nullable
	The fractional processor count available to this layer.
NumberOfProcessors	<i>Type</i> : decimal. Nullable
	The processor count for this layer.
NumberOfCores	<i>Type</i> : decimal. Nullable
	The core count for this layer.
MaxNumberOfLogical	<i>Type:</i> decimal. Nullable
Processors	The maximum number of logical processors count for this layer.
NumberOfLogicalProcessors	<i>Type:</i> decimal. Nullable
	The thread count for this layer.
Depth	<i>Type:</i> integer. Key
	The number of layers between this and the host computer.

RegistryEvidence Table

Reserved for future expansion.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 390: Database columns for RegistryEvidence table

Database Column	Details
RegistryEvidenceID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a software registry evidence record.
RegistryEvidenceHiveID	<i>Type:</i> integer. Key
	The registry hive for the registry evidence.
RegistryEvidenceKeyID	<i>Type:</i> integer. Key
	The registry key for the registry evidence.
RegistryEvidenceValueID	<i>Type:</i> integer. Key
	The value of the registry evidence.
RegistryData	<i>Type:</i> text (max 400 characters). Key
	The data contained in the registry value for the registry evidence.
Ignored	<i>Type:</i> boolean
	If True this registry evidence is ignored for application recognition.
IsShared	<i>Type:</i> boolean

RegistryEvidenceHive Table

Reserved for future use.

Table 391: Database columns for RegistryEvidenceHive table

Database Column	Details
RegistryEvidenceHiveID	<i>Type:</i> integer. Key. Generated ID Unique identifier for a registry hive.
RegistryHive	<i>Type:</i> text (max 50 characters). Key The registry hive for the registry evidence.

RegistryEvidenceKey Table

Reserved for future use.

Table 392: Database columns for RegistryEvidenceKey table

Database Column	Details
RegistryEvidenceKeyID	<i>Type:</i> integer. Key. Generated ID Unique identifier for a registry key.
RegistryKey	<i>Type:</i> text (max 200 characters). Key The registry key for the registry evidence.

RegistryEvidenceValue Table

Reserved for future use.

Table 393: Database columns for RegistryEvidenceValue table

Database Column	Details
RegistryEvidenceValueID	<i>Type:</i> integer. Key. Generated ID Unique identifier for a registry value
RegistryValue	<i>Type:</i> text (max 50 characters). Key The registry value for the registry evidence.

RelatedInstalledInstallerEvidence Table

RelatedInstallerEvidence table holds parent-child relationship between installer evidence.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 394: Database columns for RelatedInstalledInstallerEvidence table

Database Column	Details
RelatedInstalled	<i>Type:</i> integer. Key. Generated ID
InstallerEvidenceID	A synthetic unique identifier

Database Column	Details
ParentInstallerEvidenceID	<i>Type:</i> integer. Key
	An parent identifier for an installer evidence record. Foreign key to the InstallerEvidence table.
ParentCompliance	<i>Type:</i> integer. Key
ComputerID	An parent identifier for a computer record. Foreign key to the ComplianceComputer table.
ParentAccessModeID	<i>Type</i> : integer. Key
	The state an application was considered accessed. Foreign key to the AccessMode table.
ChildInstallerEvidenceID	<i>Type</i> : integer. Key
	An child identifier for an installer evidence record. Foreign key to the InstallerEvidence table.
ChildComplianceComputerID	<i>Type</i> : integer. Key
	An child identifier for a computer record. Foreign key to the ComplianceComputer table.
ChildAccessModeID	<i>Type</i> : integer. Key
	The state an application was considered accessed. Foreign key to the AccessMode table.
IsCharged	<i>Type</i> : boolean. Key
	The identifier used in the source connection to determine the pricing relation between parent and child installer evidence (specifies if it is charged = 1 or free = 0).
ConfidenceLevel	<i>Type:</i> integer. Nullable
	Confidence level for each bundled installer evidence (as a percentage).

RelatedInstalledInstallerEvidenceSourceMap Table

RelatedInstalledInstallerEvidenceSourceMap Maps related installed installer evidence to the evidence source type.

Database Column	Details
RelatedInstalled InstallerEvidence SourceMapID	<i>Type:</i> integer. Key. Generated ID A synthetic unique identifier
RelatedInstalled InstallerEvidenceID	<i>Type:</i> integer. Key An identifier for an related installer evidence record. Foreign key to the RelatedInstalledInstallerEvidence table.
ComplianceConnectionID	<i>Type:</i> integer. Key The inventory source where the end-user was reported. Foreign key to the ComplianceConnection table.

 Table 395: Database columns for RelatedInstalledInstallerEvidenceSourceMap table

RelatedInstalledSoftwareData Table

RelatedInstalledSoftware stores parent-child relationship among application installations. This is used for modelling application bundling.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 396: Database columns for RelatedInstalledSoftwareData table

Database Column	Details
RelatedInstalled SoftwareID	<i>Type:</i> integer. Key. Generated ID Unique identifier for this record.
ParentInstalledSoftwareID	<i>Type</i> : integer. Key The parent installed application. Foreign key to the InstalledSoftware table.
ChildInstalledSoftwareID	<i>Type:</i> integer. Key The child installed application. Foreign key to the InstalledSoftware table.
IsCharged	<i>Type</i> : boolean. Key The identifier used in the source connection to determine the pricing relation between parent and child installer evidence (specifies if it is charged = 1 or free = 0).

Database Column

Details

ConfidenceLevel

Type: integer. Nullable

Confidence level for each bundled installer evidence (as a percentage).

SAPSoftwareLicense Table

SAPSoftwareLicense stores additional SAP-specific licensing information for SAP licenses.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 397: Database columns for SAPSoftwareLicense table

Database Column	Details
SoftwareLicenseID	<i>Type</i> : integer. Key
	The SAP license. Foreign key to the SoftwareLicense table.
SAPServerName	<i>Type:</i> text (max 256 characters). Nullable
	The name of the SAP server. Should match the ComputerName of the record
	in the ComplianceComputer table which corresponds to the computer on which SAP is installed.
SAPBaseLicenseTypeID	<i>Type</i> : integer
	The SAP base license type, coming from the first pair of symbols in the "xx- xx-xx" license code. Foreign key to the SAPSoftwareLicenseType table.
SAPSpecialVersionID	<i>Type</i> : integer
	The SAP special version (language, country, etc.), coming from the second pair of symbols in the "xx-xx-xx" license type code. Foreign key to the SAPSoftwareLicenseType table.
SAPSurchargeID	<i>Type</i> : integer
	The SAP surcharge special version, coming from the third pair of symbols in the "xx-xx-xx" license code. Foreign key to the SAPSoftwareLicenseType table
SAPLicenseCode	<i>Type:</i> text (max 32 characters)
	The SAP license code, consisting of the license type, special version and surcharge.
HasUsage	<i>Type</i> : boolean
	Set this field to True if this license contains SAP usage/optimization information.

atabase Column

Details

Description

Type: text (max 512 characters). Nullable A decription of the SAP license.

SAPSoftwareLicenseType Table

SAPSoftwareLicenseType lists the SAP base license types and special versions, and is part of the full "xx-xx-xx" code.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 398: Database columns for SAPSoftwareLicenseType table

Database Column	Details
SAPSoftwareLicenseTypeID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for this SAP base license type.
LicenseCode	<i>Type:</i> text (max 32 characters). Key
	The unique code for this license type - one of the "xx" parts of the full "xx- xx-xx" code.
SAPSpecialVersionID	<i>Type:</i> integer. Key. Nullable
	If this is a base license type, this field is NULL (and the LicenseCode comes
	from the first "xx" part of the full "xx-xx-xx" code). Otherwise, it is a special
	SAP version (the LicenseCode comes from the second or third "xx" part), and is foreign key to the SAPSpecialVersion table.
DescriptionResourceName	<i>Type:</i> text (max 256 characters). Nullable
	The unique name of the localizable resource string representing the license
	code description. Foreign key to the ComplianceResourceString table.
DescriptionDefaultValue	<i>Type</i> : text (max 256 characters)
	The text to display if the license code resource string has no translation.

SAPSpecialVersion Table

SAPSpecialVersion lists the types of special versions, indicating which part of the "xx-xx-xx" code the SAP software license type comes from.

Table 399: Database columns for SAPSpecialVersion table

Database Column	Details
SAPSpecialVersionID	 <i>Type</i>: integer. Key. Generated ID A unique identifier for each SAPSpecialVersion. Possible values and the corresponding default strings are: 1 = Generic special version 2 = Surcharge special version.
InternalDescription	<i>Type:</i> text (max 50 characters) Internal description for developers.

ServicePack Table

Table 400: Database columns for ServicePack table

Database Column	Details
ServicePackID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for an ARL published service pack.
ServicePackUID	<i>Type</i> : integer. Key
	Factory generated identifier.
ServicePackNameID	<i>Type</i> : integer. Key
	Name of the service pack published by software publisher. Foreign key to
	the ServicePackName table.
ReleaseDate	<i>Type:</i> datetime. Nullable
	The availability date.
EndOfSupportDate	<i>Type</i> : datetime. Nullable
	The end of availability date.
Notes	<i>Type</i> : text. Nullable
	Notes for this service pack

ServicePackName Table

Table 401: Database columns for ServicePackName table

Database Column	Details
ServicePackNameID	<i>Type:</i> integer. Key. Generated ID A unique identifier for service pack.
Name	<i>Type:</i> text (max 256 characters). Key The service pack name

SoftwareAccessDeviceLicensePointsConsumedData Table

SoftwareAccessDeviceLicensePointsConsumed records how many license entitlements have been consumed for a given license by a given accessing device.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
AccessingDeviceID	<i>Type:</i> integer. Key. Nullable
	The accessing device under examination. Foreign key to the AccessingDevice table.
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	The compliance computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license being assessed. Foreign key to the SoftwareLicense table.
LicensesUsed	<i>Type:</i> integer
	How many of the points consumed are for installations actually being used.
LicenseMeasurementID	<i>Type:</i> integer. Key
	The license measurement ID. Foreign key to the LicenseMeasurement table.

 Table 402: Database columns for SoftwareAccessDeviceLicensePointsConsumedData table

Database Column	Details
CalculatedConsumption	<i>Type:</i> integer
	The calculated consumption value for this license assignment before
	exemptions or overrides are considered.

SoftwareAccessMode Table

The SoftwareAccessMode table holds the states an application has been accessed.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 403: Database columns for SoftwareAccessMode table

Database Column	Details
SoftwareAccessModeID	<i>Type</i> : integer. Key. Generated ID The primary key of the SoftwareAccessMode table.
AccessModeID	<i>Type</i> : integer. Key The access mode for the application. Foreign key to the AccessMode table.
InstalledSoftwareID	<i>Type:</i> integer. Key The installed software title to which the access mode applies. Foreign key to the InstalledSoftware table
ISACL	<i>Type:</i> boolean. Key Determines whether the software access mode record came from ACL data.

SoftwareAccessUserLicensePointsConsumedData Table

SoftwareAccessUserLicensePointsConsumed records how many license entitlements have been consumed for a given license by a given accessing user.

Database Column	Details
AccessingUserID	<i>Type</i> : integer. Key. Nullable The accessing user under examination. Foreign key to the AccessingUser table.
ComplianceUserID	<i>Type</i> : integer. Key. Nullable The compliance user under examination. Foreign key to the ComplianceUser table.
SoftwareLicenseID	<i>Type</i> : integer. Key The license being assessed. Foreign key to the SoftwareLicense table.
LicensesUsed	<i>Type:</i> integer How many of the points consumed are for installations actually being used.
LicenseMeasurementID	<i>Type:</i> integer. Key The license measurement ID. Foreign key to the LicenseMeasurement table.
CalculatedConsumption	<i>Type</i> : integer The calculated consumption value for this license assignment before exemptions or overrides are considered.

Table 404: Database columns for SoftwareAccessUserLicensePointsConsumedData table

SoftwareLicense Table

SoftwareLicense contains details of the software licenses managed by FlexNet Manager Suite.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 405: Database columns for SoftwareLicense table

Database Column	Details
SoftwareLicenseID	<i>Type</i> : integer. Key. Generated ID A unique identifier for a software license.
ParentLicenseID	<i>Type</i> : integer. Key. Nullable The id of any bundle that this license is a part of.
Name	<i>Type</i> : text (max 256 characters). Key Name of the license.

Database Column	Details
Version	<i>Type:</i> text (max 60 characters). Key. Nullable
	Version of the license.
Edition	<i>Type</i> : text (max 60 characters). Nullable
	Edition of the license.
LicenseTypeID	<i>Type:</i> integer. Key
	The license type. Foreign key to the SoftwareLicenseType table.
SoftwareLicenseMetricID	<i>Type:</i> integer. Nullable
	Custom licensing metric for this license. Foreign key to the SoftwareLicenseMetric table.
DurationID	<i>Type:</i> integer
	The duration of this license. Foreign key to the SoftwareLicenseDuration table.
SoftwareLicense	<i>Type:</i> integer
ComplianceStatusID	The compliance status of this license. Foreign key to the SoftwareLicenseComplianceStatus table. Defaults to "Compliant".
LicenseStatusID	<i>Type:</i> integer
	The status of this license. Foreign key to the LicenseStatus table.
SoftwareLicense	<i>Type:</i> integer. Nullable
PurchaseTypeID	The kind of purchase. Foreign key to the SoftwareLicensePurchaseType table.
VendorID	<i>Type:</i> integer. Key. Nullable
	The vendor from whom the license was purchased. Foreign key to the Vendor table.
PublisherID	<i>Type:</i> integer. Key. Nullable
	The software publisher associated with this license. Foreign key to the Vendor table.
ManagerID	<i>Type:</i> integer. Key. Nullable
	The manager of this license. Foreign key to the ComplianceUser table.
PartNo	<i>Type:</i> text (max 100 characters). Nullable
	The publisher's part number for this license.
SerialNumber	<i>Type:</i> text (max 256 characters). Nullable
	The serial number of the license.

Database Column	Details
LicenseKeyTypeID	<i>Type:</i> integer
	The type of license keys managed on this license. Foreign key to the SoftwareLicenseKeyType table. Defaults to "No key".
LicenseKey	<i>Type:</i> text (max 256 characters). Nullable
	The multiple-use license key of the license. Only used when the license key type is a multi-use key (for example, an Enterprise key used to cover multiple installs).
RequestNo	<i>Type:</i> text (max 60 characters). Nullable
	The request number for the license.
AcquisitionModeID	<i>Type:</i> integer
	The method of acquisition used for the asset this license covers. Defaults to Purchased. Foreign key to the AcquisitionMode table.
PurchaseOrderNumber	<i>Type:</i> text (max 50 characters). Nullable
	The purchase order number which was used to purchase the license.
PurchaseOrderDate	<i>Type:</i> datetime. Nullable
	The original purchase order date for the license.
PurchasePrice	<i>Type:</i> currency. Nullable
	The initial purchase price of the license.
PurchasePriceRateID	<i>Type:</i> integer. Nullable
	The currency rate applied to the purchase price of the license. Foreign key to the CurrencyRate table.
ChargeBackPrice	<i>Type:</i> currency. Nullable
	Amount to be charged for each computer on which the license is installed.
ChargeBackPriceRateID	<i>Type:</i> integer. Nullable
	The currency rate applied to the charge-back price. Foreign key to the CurrencyRate table.
ChargeBackPeriodTypeID	<i>Type:</i> integer
	The frequency with which the charge back price is charged. Defaults to None. Foreign key to the PeriodType table.
ExpiryDate	<i>Type:</i> datetime. Nullable
	The date this license expires. A NULL value means the license does not expire.

Database Column	Details
DeliveryDate	<i>Type:</i> datetime. Nullable
	The date this license became active. A NULL value means the license is inactive.
RetirementDate	<i>Type:</i> datetime. Nullable
	The date this license was retired. A NULL value means the license is active.
WarrantyExpiryDate	<i>Type:</i> datetime. Nullable
	The date the warranty on this license expires. This refers to a warranty Contract associated with the license.
NumberOfProcessors	<i>Type:</i> integer
	The number of processors that this license is for. This field is only used where the SoftwareLicenseType is Device (Processor-Limited) (LicenseTypeID = 11).
NumberOfCores	<i>Type:</i> integer
	The number of cores per processor that this license is for. This field is only
	used where the SoftwareLicenseType is Device (Core-Limited) (LicenseTypeID = 14).
NumberOfSockets	<i>Type:</i> integer
	The number of sockets that this license is for. The value zero is reserved to mean unlimited. This field is only used where the SoftwareLicenseType is
	Oracle Processor (LicenseTypeID = 16) or Oracle Named User Plus (LicenseTypeID = 17).
MinimumNumberOfProcessors	<i>Type</i> : integer
	The minimum number of processors that this license is for. This field is only used where the SoftwareLicenseType is Microsoft Server Processor (LicenseTypeID = 22).
MinimumNumberOf	<i>Type:</i> integer
LicensesPerVM	When licensing a Virtual Hardware System with a Microsoft Server Core
	license (LicenseTypeID = 33), consume license entitlements as though the
	virtual machine had at least this number of virtual threads.
MSPool	<i>Type:</i> text (max 120 characters). Nullable
	The name of the Microsoft license pool to which the license belongs.
MSPoints	<i>Type:</i> integer
	The points value of each installed version of this license, for use when calculating Microsoft licensing reports. This field is only valid when the MSPool field is set.

Database Column	Details
WarrantyTypeID	<i>Type:</i> integer The type of warranty for the license. Defaults to None. Foreign key to the AssetWarrantyType table.
EndOfLifeRecipient	<i>Type:</i> text (max 128 characters). Nullable The person or organization who received the asset associated with this license when it was disposed of.
EndOfLifeReasonID	<i>Type:</i> integer The reason the asset was associated with this license was disposed of. Foreign key to the End0fLifeReason table.
ResalePrice	<i>Type:</i> currency. Nullable The amount the asset associated with this license was sold for.
ResalePriceRateID	<i>Type:</i> integer. Nullable The currency rate to be applied to the sale price of the asset associated with this license.
CreationUser	<i>Type:</i> text (max 256 characters). Nullable The operator who created this license.
CreationDate	<i>Type:</i> datetime The date and time the license was created.
UpdatedUser	<i>Type:</i> text (max 256 characters). Nullable The oeprator who last updated this license.
UpdatedDate	<i>Type:</i> datetime. Nullable The date and time the license was last updated.
Comments	<i>Type:</i> text. Nullable Comments about the license recorded by an operator. This field may also be used for storing license keys.
NumberPurchased	<i>Type:</i> integer The quantity of purchased license entitlements.
NumberInstalled	<i>Type:</i> integer The quantity of software installations accounted for by this license. This value is calculated and updated during the data import process, based on the software inventory details imported.
NumberCalculated	<i>Type:</i> integer The calculated consumption value for this license.

Database Column	Details
ResourceUnitsConsumed	<i>Type:</i> decimal The quantity consumed of a resource relevant to this license. The type of resource is identified by the associated SoftwareLicenseMetric. On the IBM Resource Value Unit license type this will have a points rule set applied to it to calculate the final license consumption value.
PeakConsumed	<i>Type</i> : integer The peak quantity of software installations accounted for by this license. This value is a high-water mark of the Consumed entitlements for the license.
AdditionalBulkUsers Regular	<i>Type:</i> integer A number of regular users associated with this license in addition to those specified individually in SoftwareLicenseAllocation. For IBM User Value Unit licenses this will have a points rule set applied to it to calculate the final license consumption value.
AdditionalBulkUsers Infrequent	<i>Type:</i> integer A number of infrequent users associated with this license in addition to those specified individually in SoftwareLicenseAllocation. For IBM User Value Unit licenses this will have an infrequent user multiplier and points rule set applied to it to calculate the final license consumption value.
AdditionalBulkUsers External	<i>Type:</i> integer A number of external users associated with this license in addition to those specified individually in SoftwareLicenseAllocation. For IBM User Value Unit licenses this will have an external user multiplier and points rule set applied to it to calculate the final license consumption value.
UserMultiplierInfrequent	<i>Type</i> : decimal The fraction of a regular user's consumption to use for infrequent users.
UserMultiplierExternal	<i>Type</i> : decimal The fraction of a regular user's consumption to use for external users.
NumberUsed	<i>Type</i> : integer The number of software installations covered by this license that are actually being used.
NumberAllocated	<i>Type:</i> integer The quantity of license entitlements allocated to individual end-users or computers.
NumberAssigned	<i>Type</i> : integer The quantity of license entitlements that have been assigned to enterprise groups.

Database Column	Details
NumberOverridden	<i>Type</i> : integer The quantity of overriden consumption allocated to individual end-users or computers.
LastCalculatedNUPMinimum	<i>Type</i> : integer. Nullable The last calculated minimum for Oracle Named User Plus licenses.
AlwaysInstalled	<i>Type:</i> boolean If this field is True, this license is considered in to be used whenever it is allocated. If False, software usage is considered separately, and allocation merely defines the corporation's modelling of who is expected to consume entitlements.
LocationID	<i>Type</i> : text (max 128 characters). Key. Nullable Any enterprise location linked to this license. Foreign key to the GroupEx table.
BusinessUnitID	<i>Type:</i> text (max 128 characters). Key. Nullable Any enterprise corporate unit linked to this license. Foreign key to the GroupEx table.
CostCenterID	<i>Type:</i> text (max 128 characters). Key. Nullable Any cost center in the enterprise that is linked to this license. Foreign key to the GroupEx table.
CategoryID	<i>Type:</i> text (max 128 characters). Key. Nullable Any enterprise category associated with this license. Foreign key to the GroupEx table.
CoverInstallsOnVirtual Machines	<i>Type:</i> boolean This is known in the UI as "Enable special handling for virtual machines". Its effect usually includes enabling sub-capacity licensing of virtual installs and/or capping of license consumption at the host level, but its exact effect depends on the specific license type. For license types that expose additional virtualization properties, this property must be set for the other properties to be used.
LimitNumberOfVirtual Installs	<i>Type:</i> boolean If this field is True, there is a limit to the number of installations on virtual machines that can be covered by each license entitlement. If False, one license entitlement may cover use on any number of virtual machines (typically on one host computer).

Database Column	Details
NumberOfAllowedVirtual	<i>Type</i> : integer. Nullable
Installs	If the license covers installations on virtual machines, this field specifies how many installations per host are allowed before an additional license entitlement (or point) is consumed.
LimitVirtualInstalls	<i>Type:</i> boolean
IncludesHost	If this field is True, the host operating system installations are included in the overall count of operating systems on the host when there is a limit on the number of allowed virtual installs for each license. If False, the host operating system is not considered when determining virtual install limits.
NumberOfAllowed	<i>Type</i> : integer. Nullable
ProcessorsPerHost	This field specifies how many processors per host are allowed before an additional license entitlement (or point) is consumed. Null provides the default of 1. Zero provides unlimited.
UseHostProcessor	<i>Type</i> : boolean
Information	If virtual installs are allowed, set this field to True if host information should be used when calculating license points consumed.
AllowIBMPVUSubCapacity	<i>Type</i> : boolean
FromNonILMT	If the license does not use host processor information (not full capacity), set this field to True to allow non-ILMT sub-capacity PVU consumption calculations to be used.
LimitNumberOf	<i>Type</i> : boolean
ApplicationsEach LicensePointCovers	If this field is True, there is a limit on the number of application installations allowed per license entitlement (or point). If False (the default), then a license entitles you to any number of installations of software linked to this license on the one computer.
NumberOfApplication	<i>Type</i> : integer. Nullable
InstallsAllowedPer LicensePoint	Where the previous field is set to True, this field defines the limited number of application installations allowed per entitlement (or point).
LimitNumberOfComputers	<i>Type</i> : boolean
UserLicenseCanBe	If this field is True, there is a limit to the number of computers that a user-
InstalledOn	based license can be linked to per entitlement (or point) consumed. If False (the default), a single end-user is entitled to install related software for his/her own use on any number of computers.
NumberOfComputers	<i>Type:</i> integer. Nullable
AllowedPerUserLicense	Where the previous field is set to True, this field defines the limited number
Point	of application installations an end-user is allowed per entitlement (or point).

Database Column	Details
MinimumNumberOfUsers	<i>Type</i> : integer The minimum number of users allowed for the license. This is used for Oracle Named User Plus licenses.
MinimumNumberOfUsers MultipliedByProcessors	<i>Type:</i> boolean Whether the previous field a fixed value for the license or it is a multiple of the number of processor points consumed by the license. This is used for Oracle Named User Plus licenses.
SecondUsageWorkLaptop	<i>Type</i> : boolean If this field is True, the license confers the right of second use on a work laptop. If False, there is no right of second use allowed on a work laptop.
SecondUsageAtHome	<i>Type:</i> boolean If this field is True, the license confers the right of second use on a home computer by the same end-user as the primary end-user of the license entitlement consumed at work. If False (the default), there is no right of second use allowed on a home computer.
MultiUseInheritFrom Contract	<i>Type:</i> boolean Set this field to True if the license should inherit the values for right of multiple use from a contract.
MultiUseInheritFrom ContractID	<i>Type</i> : integer. Nullable If the previous field is True, this is the contract that right of multiple use is inherited from. Foreign key to Contract table.
SecondUsageInheritFrom Contract	<i>Type</i> : boolean Set this field to True if the license should inherit the values for right of second use from a contract.
SecondUsageInheritFrom ContractID	<i>Type</i> : integer. Nullable If the previous field is True, this is the contract that right of second use is inherited from. Foreign key to Contract table.
CoverInstallsOnVM InheritFromContract	<i>Type</i> : boolean Set this field to True if the license should inherit virtual machine rights from a contract.
CoverInstallsOnVM InheritFromContractID	<i>Type</i> : integer. Nullable If the previous field is True, this is the contract that virtual machine rights are inherited from. Foreign key to Contract table.

Database Column	Details
AutoManageTitles	<i>Type:</i> boolean Set this field to True if the license should have its application links automatically managed for upgrade and downgrade rights. When this field is False, the operator must manually manage links between this license and any applications.
DowngradeOnlyToVersion Legacy	<i>Type:</i> text (max 60 characters). Nullable A repository for backward-compatible custom data.
UpgradeOnlyToVersion Legacy	<i>Type</i> : text (max 60 characters). Nullable A repository for backward-compatible custom data.
TrueUp	<i>Type:</i> boolean Set this field to True if the license is a true-up license (and so never goes into at risk).
UnlimitedConsumption	<i>Type:</i> boolean Set this field to True if the license is a unlimited license (and so never goes into at risk).
OracleLegacyLicenseTypeID	<i>Type:</i> integer. Key. Nullable The specific Oracle legacy license type, where appropriate. Foreign key to the OracleLegacyLicenseType table.
GroupAllocationTypeID	<i>Type:</i> integer. Key Allocations of entitlements under any license can be made to only one type of enterprise group, specified here. Foreign key to the GroupType table.
GroupAllocation ReportingTypeID	<i>Type:</i> integer. Key Determines when enterprise groups will be considered to have risked their allocations of entitlements under this license. Foreign key to the SoftwareLicenseGroupAllocationReportingType table.
GroupAllocation ComplianceLevel	<i>Type:</i> integer. Nullable Determines the depth level of groups to be used for calculating the risk status for a license.
CannotManuallyUpdate GroupAssignments	<i>Type:</i> boolean Set this field to True if the operator must make group assignments through a Assign License Entitlements dialog box. If False, changes can be made directly in the license properties pages.

Database Column	Details
CalculateCompliance	<i>Type:</i> boolean
	When this field is True (the default), and the associated
	SoftwareLicenseType also has its CalculateCompliance field set to True
	(true for most license types), license consumption must be calculated from imported inventory. When False, the compliance state must be imported, not calculated.
IsSharableToLibrary	<i>Type:</i> boolean
	Set this field to True (the default) if the license is sharable to the
	downloadable FlexNet Manager Suite ARL library.
CopyEditionAndVersion	<i>Type:</i> boolean
	Set this field to True (the default) if edition and version should be
	automatically copied to the license from the primary application.
SoftwareLicenseTierTypeID	<i>Type:</i> integer. Key. Nullable
	Type of the tier, for Tiered Device license type only. Foreign key to the
	SoftwareLicenseTierType table.
SoftwareLicenseTierCode	<i>Type:</i> text (max 256 characters). Nullable
	The actual tier of the license, corresponding to the tier type. For Tiered
	Device license type only.
ImportedFromFNMEA	<i>Type:</i> boolean
	Set this to True if this license was imported from FlexNet Manager for
	Engineering Applications.
SoftwareLicensePoints	<i>Type</i> : integer. Key. Nullable
RuleSetID	The points rule set used to calculate compliance for this license. Foreign key to the SoftwareLicensePointsRuleSet table.
BaselineQuantity	<i>Type:</i> integer. Nullable
	The baseline value for this license
BaselineDate	<i>Type:</i> datetime. Nullable
	The date at which the baseline applies.
AlternateNon	<i>Type:</i> integer. Nullable
InventoriedUsers	Number of non-inventoried users who are consuming this license. For
	Oracle Named User Plus and Oracle Application User licenses, this
	acts as an alternate mean to specify user consumption in the case where no instance users are available from inventory. The number of non-inventoried
	users are added to the number of unique users found from inventory when
	number installed and number used are calculated in license reconcile.

Database Column	Details
InheritLicenseMobility FromContract	<i>Type:</i> boolean Set this field to True if this license inherits its license mobility rights from a contract. If False (the default), license mobility rights must be configured directly on the license properties.
InheritLicenseMobility FromContractID	<i>Type:</i> integer. Nullable If the previous field is True, this is the contract that mobility rights are inherited from. Foreign key to the Contract table.
InheritLicense ConsumptionFromContract	<i>Type:</i> boolean Set this field to True if this license inherits its license consumption rules from a contract. If False (the default), license consumption rules must be configured directly on the license properties.
InheritLicense ConsumptionFrom ContractID	<i>Type:</i> integer. Nullable If the previous field is True, this is the contract that license consumption rules are inherited from. Foreign key to the Contract table.
InheritProcessorLimits FromContract	<i>Type</i> : boolean Set this field to True if this license inherits its processor limits rights from a contract. If False (the default), license processor limits rights must be configured directly on the license properties.
InheritProcessorLimits FromContractID	<i>Type</i> : integer. Nullable If the previous field is True, this is the contract that processor limits rights are inherited from. Foreign key to the Contract table.
AllowMaintenanceToExpire	<i>Type</i> : boolean If the value True, maintenance added to license will not be renewed. If this flag is set, use rights for this license will be automatically updated once the maintenance expires.
AutoSynchronized	<i>Type</i> : boolean If the value is True the license information will be synchronized with the information from the source connection.
UseRightsAutoUpdated	<i>Type</i> : boolean If the value True, the use rights of this license has been automatically updated when all the maintenace expired. Else, use rights has not been updated.

SoftwareLicenseAllocation Table

SoftwareLicenseAllocation records the allocations of individual computers, end-users, enterprise groups or instances to licenses.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicense	<i>Type</i> : integer. Key. Generated ID
AllocationID	A unique identifier for the license allocation record.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license that has been allocated. Foreign key to the SoftwareLicense table.
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	The computer to which the license is allocated. Foreign key to the ComplianceComputer table.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	The end-user to which the license is allocated. Foreign key to the ComplianceUser table.
InstanceID	<i>Type:</i> integer. Key. Nullable
	The instance to which the license is allocated. Foreign key to the Instance table.
GroupExID	<i>Type</i> : text (max 128 characters). Key. Nullable
	The enterprise group to which the license is assigned. Foreign key to the GroupEx table.
LicenseUserID	<i>Type</i> : integer. Key. Nullable
	The external end-user to whom the license is allocated. Foreign key to the LicenseUser table.
AccessingUserID	<i>Type</i> : integer. Key. Nullable
	The external accessing user to whom the license is allocated. Foreign key to the AccessingUser table.

Table 406: Database columns for SoftwareLicenseAllocation table

Database Column	Details
SoftwareLicense	<i>Type</i> : integer. Key. Nullable
AllocationUserTypeID	Indicates for user allocations whether they are a regular user or some special type of user for this license. Foreign key to the SoftwareLicenseAllocationUserType table.
NumberAllocated	<i>Type:</i> integer. Nullable
	The number of license entitlements assigned. This is used for group assignments.
NumberUsed	<i>Type:</i> integer. Nullable
	The number of license entitlements where the application is recorded as being used.
SoftwareLicense	<i>Type:</i> integer. Nullable
AllocationStatusID	Indicates the status of an allocation. Foreign key to the SoftwareLicenseAllocationStatus table.
SoftwareLicenseKeyID	<i>Type:</i> integer. Key. Nullable
	The software license key that is allocated to this end-user/computer. Foreign key to the SoftwareLicenseKey table.
SoftwareLicense	<i>Type:</i> integer. Key. Nullable
ExemptionReasonID	The reason why this allocation is exempted from consuming a license entitlement. Foreign key to the SoftwareLicenseExemptionReason table.
IsIncludedForLicenseRec	<i>Type:</i> boolean. Key
	Indicates allocations whether they should be used in regular license reconciliation.

SoftwareLicenseAllocationStatus Table

SoftwareLicenseAllocationStatus is a static table storing a collection of status values for a license allocation.

Database Column	Details
SoftwareLicense	<i>Type:</i> integer. Key. Generated ID
AllocationStatusID	A unique identifier for each SoftwareLicenseAllocationStatus. Possible values and the corresponding default strings are:
	• 1 = Allocated
	• 2 = Awaiting Inventory
	• 3 = Permanent
	• 4 = Unallocated.
StatusResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an
	allocation status. Foreign key to the ComplianceResourceString table.
StatusDefaultValue	<i>Type:</i> text (max 50 characters)
	The text to display if the status resource string has no translation.

Table 407: Database columns for SoftwareLicenseAllocationStatus table

SoftwareLicenseAllocationUserType Table

SoftwareLicenseAllocationUserType is a static table storing a collection of user type values for a license allocation.

Database Column	Details
SoftwareLicense	<i>Type</i> : integer. Key. Generated ID
AllocationUserTypeID	A unique identifier for each SoftwareLicenseAllocationUserType. Possible values and the corresponding default strings are:
	• 1 = Normal
	• 2 = Infrequent
	• 3 = External.
UserTypeResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a user
	allocation type. Foreign key to the ComplianceResourceString table.
UserTypeDefaultValue	<i>Type:</i> text (max 50 characters)
	The text to display if the user type resource string has no translation.

Table 408: Database columns for SoftwareLicenseAllocationUserType table

SoftwareLicenseBreachReasonData Table

SoftwareLicenseBreachReasonData identifies the reasons why non-compliant software licenses are in this state.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 409: Database co	olumns for Software	LicenseBreachReasonData	table

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key The software license. Foreign key to the SoftwareLicense table.
LicenseBreachReasonID	<i>Type:</i> integer. Key The license risk reason. Foreign key to the LicenseBreachReason table.
LicenseMeasurementID	<i>Type</i> : integer. Key The license measurement ID. Foreign key to the LicenseMeasurement table.

SoftwareLicenseChangeEvent Table

The SoftwareLicenseChangeEvent table holds the details of all license change events.

Table 410: Database columns for SoftwareLicenseChangeEvent table

Database Column	Details
ComplianceEventID	<i>Type:</i> integer. Key A unique identifier and foreign key to the ComplianceEvent table.
SoftwareLicenseID	<i>Type</i> : integer. Key The license involved in the change event. Foreign key to the SoftwareLicense table.
SoftwareTitleID	<i>Type:</i> integer. Key The software title that needs to be added or removed. Foreign key to the SoftwareTitle table.

Database Column	Details
SoftwareLicenseChange	<i>Type:</i> integer
EventSourceID	What caused the event. Foreign key to the
	SoftwareLicenseChangeEventSource table.
SoftwareLicenseChange	<i>Type:</i> integer
EventReasonID	The type of event. Foreign key to the
	SoftwareLicenseChangeEventReason table.
SoftwareTitleLicense	<i>Type:</i> integer. Nullable
ReasonID	When a software title has been added to a license, the reason it has been
	added (ie because upgrade rights allow it, for example). Foreign key to the
	SoftwareTitleLicenseReason table.

SoftwareLicenseChangeEventReason Table

SoftwareLicenseChangeEventReason is a static table holding all the valid reasons why a license change event was generated.

Table 411: Database columns for SoftwareLicenseChangeEventReason table

Database Column	Details
SoftwareLicenseChange EventReasonID	 Type: integer. Key. Generated ID A unique identifier for each SoftwareLicenseChangeEventReason. Possible values and the corresponding default strings are: 1 = Add Application 2 = Remove Application.
ChangeEventReason ResourceString	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a change event reason. Foreign key to the ComplianceResourceString table.
ChangeEventReason DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the reason resource string has no translation.

SoftwareLicenseChangeEventSource Table

SoftwareLicenseChangeEventSource is a static table holding all the valid sources of license change events.

Database Column	Details
SoftwareLicenseChange EventSourceID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each SoftwareLicenseChangeEventSource. Possible values and the corresponding default strings are: • 1 = ARL
	• 2 = Software License
	• 3 = Software Title (the application properties)
	• 4 = Contract
	• 5 = Version (changing the relative priorities or weights of application versions linked to a license)
	• 6 = Edition (changing the relative priorities or weights of application editions linked to a license).
ChangeEventSource	<i>Type:</i> text (max 256 characters). Key
ResourceString	The unique name of the localizable resource string representing a change event source. Foreign key to the ComplianceResourceString table.
ChangeEventSource	<i>Type:</i> text (max 100 characters)
DefaultValue	Default value for a license change event source if the source resource has no translation.

Table 412: Database columns for SoftwareLicenseChangeEventSource table

SoftwareLicenseCloudServiceProvider Table

SoftwareLicenseCloudServiceProvider contains the cloud service providers supported by licenses.

Table 413: Database columns f	or SoftwareLicenseCloud	dServiceProvider table
-------------------------------	-------------------------	------------------------

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key Identifies a software license. Foreign key to the SoftwareLicense table.
CloudServiceProviderID	<i>Type:</i> integer. Key Identifies a cloud service provider. Foreign key to the CloudServiceProvider table.

SoftwareLicenseComplianceStatus Table

SoftwareLicenseComplianceStatus is a static table listing valid compliance states for a license.

Database Column	Details
SoftwareLicense ComplianceStatusID	 Type: integer. Key. Generated ID A unique identifier for each SoftwareLicenseComplianceStatus. Possible values and the corresponding default strings are: 1 = Compliant 2 = At Risk
	 3 = Unknown 4 = Not Tracked.
StatusResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing a compliance status. Foreign key to the ComplianceResourceString table.
StatusDefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the status resource string has no translation.

SoftwareLicenseComputerProblemData Table

SoftwareLicenseComputerProblemData identifies the problems with individual ComplianceComputers that contributed to an associated license having an unknown compliance status. For example, some license types caculate entitlement consumption based on the number of processor cores present in a computer, but that detail is not available from Microsoft SCCM before version 2012, so computers from this inventory source will cause associated licenses to have unknown compliance status.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 415: Database columns for SoftwareLicenseComputerProblemData table

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key The software license. Foreign key to the SoftwareLicense table.

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key
	The computer consuming license entitlements. Foreign key to the ComplianceComputer table.
SoftwareLicense	<i>Type:</i> integer
ComputerProblemTypeID	The type of problem this computer's inventory causes for a given license. For example, core-based licenses require accurate inventory of processor core counts to determine ther compliance status.
	Foreign key to the SoftwareLicenseComputerProblemType table.
LicenseMeasurementID	<i>Type:</i> integer. Key The license measurement ID. Foreign key to the LicenseMeasurement table.

SoftwareLicenseComputerProblemType Table

SoftwareLicenseComputerProblemType is a static table holding the collection of problems that a computer can have which might cause a particular type of license to have an unknown compliance status.

Database Column	Details
SoftwareLicense ComputerProblemTypeID	 <i>Type:</i> integer. Key. Generated ID A unique identifier for each SoftwareLicenseComputerProblemType. Possible values and the corresponding default strings are: 1 = Core count missing from inventory 2 = Processor count missing from inventory 3 = Socket count missing from inventory 4 = Thread count missing from inventory.
ProblemTypeResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing a problem type. Foreign key to the ComplianceResourceString table.
ProblemTypeDefaultValue	<i>Type:</i> text (max 512 characters) The text to display if the problem type resource string has no translation.

Table 416: Database columns for SoftwareLicenseComputerProblemType table

SoftwareLicenseConnection Table

SoftwareLicenseConnection stores a link between software licenses in SoftwareLicense which have been reported in inventory, and external IDs which can be used to identify them in their inventory sources.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key A unique identifier for the software license. Foreign key to the SoftwareLicense table.
ComplianceConnectionID	<i>Type:</i> integer. Key The inventory source where the software license was reported. Foreign key to the ComplianceConnection table.
ExternalLicenseID	<i>Type:</i> big integer. Key A (hopefully unique) identifier for the software license in the external inventory source.

SoftwareLicenseContract Table

SoftwareLicenseContract links licenses to related contracts.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 418: Database columns for SoftwareLicenseContract table

Database Column	Details
SoftwareLicenseContractID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this record.
SoftwareLicenseID	<i>Type:</i> integer. Key The license to which the contract is related. Foreign key to the SoftwareLicense table.

Database Column

Details

Type: integer. Key

ContractID

The contract related to the license. Foreign key to the Contract table.

SoftwareLicenseCoresConsumedData Table

SoftwareLicenseCoresConsumedData records how many cores have contributed to license point consumption for a given license by a given computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceComputerID	<i>Type</i> : integer. Key The computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type:</i> integer. Key The license being assessed. Foreign key to the SoftwareLicense table.
CoresConsumed	<i>Type</i> : integer The number of cores that have contributed to license point consumption for the license on the computer.
LicenseMeasurementID	<i>Type:</i> integer. Key The license measurement ID. Foreign key to the LicenseMeasurement table.
CalculatedConsumption	<i>Type:</i> integer The calculated consumption value for this license assignment before exemptions or overrides are considered.

Table 419: Database columns for SoftwareLicenseCoresConsumedData table

SoftwareLicenseCreation Table

SoftwareLicenseCreation records which SKU definition was used to create a software license.

Table 420: Database columns for SoftwareLicenseCreation table

Database Column	Details
SoftwareLicenseCreationID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for this record.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The software license created. Foreign key to the SoftwareLicense table.
SoftwareSkuID	<i>Type:</i> integer. Key. Nullable
	The SKU that was recognized. This value is optional, as the software license could have been created directly using a definition selected by the operator, without a SKU being used as the link. Foreign key to the SoftwareSku table.
SoftwareLicense	<i>Type</i> : integer. Key
DefinitionID	The license definition used to create the software license. Foreign key to the SoftwareLicenseDefinition table.
LicenseDefinitionVersion	<i>Type</i> : integer. Key
	Which version of the license definition was used to create the software license.

SoftwareLicenseDefinition Table

SoftwareLicenseDefinition maps SKUs to the license definitions and applications that it relates to.

Table 421: Database columns for SoftwareLicenseDefinition table

Database Column	Details
SoftwareLicense	<i>Type:</i> integer. Key. Generated ID
DefinitionID	A unique identifier for this record.
LicenseDefinition	<i>Type:</i> text (max 30 characters). Key
FactoryUID	The FlexNet Manager Suite factory unique identifier for this record.
NonMaintenanceLicense	<i>Type:</i> text (max 30 characters). Key. Nullable
DefinitionFactoryUID	The FlexNet Manager Suite factory without maintenance for this record.
LicenseDefinitionTypeID	<i>Type:</i> integer. Key The lciense definition type. Foreign key to the LicenseDefinitionType table.

Database Column	Details
LicenseDefinition	<i>Type:</i> text
	The license definition. Contains information relevant to license creation and application links.
ProductName	<i>Type:</i> text (max 2000 characters)
	When a license is created using this definition, this will be its license name.
ProductVersion	<i>Type:</i> text (max 2000 characters)
	When a license is created using this definition, this will be its license version.
ProductPublisher	<i>Type:</i> text (max 2000 characters)
	When a license is created using this definition, this will be its license publisher.
LicenseTypeID	<i>Type</i> : integer. Key
	This definition will create a license of this type. Foreign key to the LicenseType table.
IsUpgrade	<i>Type:</i> boolean
	Set this field to True if this definition will create an upgrade license. If this
	field is False, this definition creates a standard license.
Version	<i>Type:</i> integer. Key
	The current version of this SKU definition.
PreviousVersion	<i>Type:</i> integer. Key. Nullable
	The version of the SKU definition prior to the current version.
CreationDate	<i>Type:</i> datetime
	The date that this record was created.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date that this record was last updated.

SoftwareLicenseDuration Table

The collection of durations for which a license can be active.

Table 422: Database columns for SoftwareLicenseDuration table

Database Column	Details
SoftwareLicenseDurationID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a license duration. Possible values (and associated default names) are:
	• 1 = Perpetual
	• 2 = TimeLimited
	• 3 = Subscription.
DurationResourceName	<i>Type:</i> text (max 256 characters). Key
	The name of the resource string containing the text to display on the user interface.
DurationDefaultValue	<i>Type:</i> text (max 100 characters)
	The value to display if there is no resource string available for this status

SoftwareLicenseExemptionReason Table

The collection of types exemption reasons that may be associated with software license allocations.

Database Column	Details	
SoftwareLicense	<i>Type:</i> integer. Key. Generated ID	
ExemptionReasonID	A unique identifier for each SoftwareLicenseExemptionReason. Possible	
	values and the corresponding default strings are:	
	 1 = Alpha, beta, early support program 	
	• 2 = Backup, disaster recovery	
	• 3 = Component of a non-PVU licensed offering	
	• 4 = Component is not compatible with the server or agent system	
	• 5 = Development	
	• 6 = Evaluation, trial	
	• 7 = Fail-over	
	• 8 = Not eligible for PVU licensing	
	• 9 = Other	
	• 10 = Second use	
	• 11 = Test	
	• 12 = Covered by related product	
	• 13 = Covered by virtual application access	
	• 14 = No usage for virtual application within specified time limit	
ResourceName	<i>Type</i> : text (max 256 characters). Key	
	The unique name of the localizable resource string representing an	
	exemption reason. Foreign key to the ComplianceResourceString table.	
DefaultValue	<i>Type</i> : text (max 100 characters)	
	The text to display if the type resource string has no translation.	

Table 423: Database columns for SoftwareLicenseExemptionReason table

SoftwareLicenseExemptionRole Table

SoftwareLicenseExemptionRole table holds information on role exemption rule for licenses. Contains many to many relationship between licenses and device roles.

Database Column	Details
SoftwareLicense	<i>Type:</i> integer. Key. Generated ID
ExemptionRoleID	A unique identifier for the license exemption role record.
SoftwareLicenseID	<i>Type</i> : integer. Key
	The license that has role exemption rule. Foreign key to the SoftwareLicense table.
ExemptionRoleID	<i>Type</i> : integer. Key
	The device role that is exempted from license consumption. Foreign key to the ComplianceComputerRole table.
ExemptionLimit	<i>Type:</i> integer. Nullable
	The number of devices that can be exempted, having an exempted role.

Table 424: Database columns for SoftwareLicenseExemptionRole table

SoftwareLicenseGroupAllocationReportingType Table

SoftwareLicenseGroupAllocationReportingType stores the set of tests that can be used to determine whether a license is in "group at risk" for one or more of its associated enterprise groups.

Database Column	Details
SoftwareLicenseGroup AllocationReporting TypeID	 Type: integer. Key. Generated ID A unique identifier for each SoftwareLicenseGroupAllocationReportingType. Possible values and the corresponding default strings are: 0 = None 1 = Consumed Exceeds Purchased
	• 2 = Consumed Exceeds Assigned.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a group at risk test type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters)
	The text to display if the type resource string has no translation.

SoftwareLicenseGroupAssignmentHistory Table

SoftwareLicenseGroupAssignmentHistory is used to keep track of changes made to assignments of software license entitlements to enterprise groups.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details	
SoftwareLicenseGroup AssignmentHistoryID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the history record.	
GroupExID	<i>Type:</i> text (max 128 characters). Key	
	This is the primary group that had a change of assignments. Foreign key to the GroupEx table.	
FromGroupExID	<i>Type:</i> text (max 128 characters). Key. Nullable	
	If assignments were transferred, this is the source group who had assignments taken away. Foreign key to the GroupEx table.	
FromGroupExPath	<i>Type:</i> text (max 500 characters). Nullable	
	The path of the group that assignments were transferred from. This field is used to display the group name (at the time that the transfer took place) when showing history after the group has been deleted.	
HistoryDate	<i>Type</i> : datetime	
	The date of the change.	
SoftwareLicenseID	<i>Type:</i> integer. Key	
	The license for which entitlements are being assigned. Foreign key to the SoftwareLicense table.	
UserName	<i>Type:</i> text (max 60 characters)	
	The operator who made the change.	
Comments	<i>Type:</i> text (max 2000 characters). Nullable	
	Comments recorded about the change.	
NumberAdded	<i>Type</i> : integer	
	The number of assignments added to or removed from the group.	
Total	<i>Type:</i> integer	
	The progressive total of assignments to the group following this change.	

Table 426: Database columns for SoftwareLicenseGroupAssignmentHistory table

Database Column	Details
SoftwareLicenseGroup AssignmentHistoryTypeID	<i>Type:</i> integer. Key The type of history record. This records the kind of change that was made (eg, a flat increase/decrease of the assignment count, a transfer, and so on). Foreign key to the SoftwareLicenseGroupAssignmentHistoryType table.

SoftwareLicenseGroupAssignmentHistoryType Table

SoftwareLicenseGroupAssignmentHistoryType stores a collection of the types of history record that can be stored in the SoftwareLicenseGroupAssignmentHistory table.

Database Column	Details
SoftwareLicenseGroup AssignmentHistoryTypeID	 Type: integer. Key. Generated ID A unique identifier for each SoftwareLicenseGroupAssignmentHistoryType. Possible values and the corresponding default strings are: 1 = Manual (manual increase/decrease of the group assignment quantity)
	 2 = ManualDialog (manual increase/decrease of the group assignment quantity, using the Assign License Entitlements dialog_
	• 3 = Transfer (a transfer of entitlements from one enterprise group to another)
	 4 = ClearAssignments (the Clear Assignments button has been used to remove all entitlements from a group)
	 5 = AssignPurchased (the Assign Purchases button has been used to copy purchases within the group to the group assignment total)
	 6 = ChangeGroupType (assignments have been cleared because the group assignment type has been changed).
ResourceName	<i>Type</i> : text (max 256 characters). Nullable
	The unique name of the localizable resource string representing a history type. Foreign key to the ComplianceResourceString table.
SoftwareLicenseGroup AssignmentHistoryType Name	<i>Type</i> : text (max 64 characters). Key A description of the history type.

Table 427: Database columns for SoftwareLicenseGroupAssignmentHistoryType table

Database Column	Details	

DefaultValue

Type: text (max 50 characters)

The text to display if the type resource string has no translation.

SoftwareLicenseGroupBreachStatus Table

SoftwareLicenseGroupBreachStatus stores the collection of possible outcomes of group at risk testing.

Database Column	Details
SoftwareLicenseGroup BreachStatusID	 Type: integer. Key. Generated ID A unique identifier for each SoftwareLicenseGroupBreachStatus. Possible values and the corresponding default strings are: 0 = Ignored 1 = Group Not At Risk
ResourceName	 2 = Group At Risk. <i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing a group at risk status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the status resource string has no translation.

SoftwareLicenseGroupPointsConsumedData Table

SoftwareLicenseGroupPointsConsumed records the licenses pre-calculated local and rolledup totals for groups.

Database Column	Details
SoftwareLicenseID	<i>Type</i> : integer. Key
	The license that owns the pre-calculated totals for a group. Foreign key to the SoftwareLicense table.
GroupTypeID	<i>Type:</i> integer. Key
	Type of the group(Location, Cost center, etc)
GroupExID	<i>Type:</i> text (max 128 characters). Key. Nullable
	The group where the local and rolledup values are calculated. Foreign key to the GroupEx table.
RolledUpNumberConsumed	<i>Type:</i> integer
	The sum of points consumed of the current group and of all its child groups.
LocalNumberConsumed	<i>Type:</i> integer
	The sum of points consumed of the current group
RolledUpNumberUsed	<i>Type:</i> integer
	The sum of used points f the current group and of all its child groups.
LocalNumberUsed	<i>Type:</i> integer
	The sum of used points of the current group
RolledUpNumberPurchased	<i>Type:</i> integer
	The rolled up purchase counts of the license.
LocalNumberPurchased	<i>Type:</i> integer
	The local purchase counts of the license
LicenseMeasurementID	<i>Type</i> : integer. Key
	The license measurement ID. Foreign key to the LicenseMeasurement table.
RolledUpNumberCalculated	<i>Type</i> : integer
	The sum of points calculated for the current group and of all its child groups.
LocalNumberCalculated	<i>Type</i> : integer
	The sum of points calculated for the current group.

Table 429: Database columns for SoftwareLicenseGroupPointsConsumedData table

SoftwareLicenseILMTPointsConsumedData Table

SoftwareLicenseILMTPointsConsumed records how many PVU counts and their corresponding core counts have been consumed for a given license by a given computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 430: Database columns for SoftwareLicenseILMTPointsConsumedData table

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key
	The computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license being assessed. Foreign key to the SoftwareLicense table.
CoreCount	<i>Type:</i> integer
	The number of licensable cores for the license on the computer.
PVUCount	<i>Type</i> : integer
	The number of PVU counts consumed for the license on the computer.
PeakPVUCount	<i>Type:</i> integer
	The number of PVU counts consumed for the license on the computer at the time where the peak for this license occurred.
LicenseMeasurementID	<i>Type:</i> integer. Key
	The license measurement ID. Foreign key to the LicenseMeasurement table.
CalculatedConsumption	<i>Type</i> : integer
	The calculated consumption value for this license assignment before exemptions or overrides are considered.

SoftwareLicenseKey Table

The SoftwareLicenseKey table contains installation keys that are linked to software licenses.

Database Column	Details
SoftwareLicenseKeyID	<i>Type</i> : integer. Key. Generated ID A unique identifier for this license key.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key The software license that this installation key belongs to. Foreign key to the SoftwareLicense table.
KeyValue	<i>Type:</i> text (max 400 characters). Key The installation key value.

SoftwareLicenseKeyType Table

The collection of types of installation keys that may be associated with software licenses.

Database Column	Details
SoftwareLicenseKeyTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each SoftwareLicenseKeyType. Possible values and the corresponding default strings are:
	• 1 = No keys
	• 2 = One (multi-install) key per license
	• 3 = One (multi-install) key per application
	• 4 = One (single-install) key per installation.
	• 5 = One (multi-install) key per installation.
KeyTypeResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a license key type. Foreign key to the ComplianceResourceString table.
KeyTypeDefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.

SoftwareLicenseMetric Table

SoftwareLicenseMetric holds the pre-defined list of licensing custom metrics.

 Table 433: Database columns for SoftwareLicenseMetric table

Database Column	Details
SoftwareLicenseMetricID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each SoftwareLicenseMetric. Possible values and the corresponding default strings are:
	 1 = \$M cost of goods sold
	 2 = \$M freight under management
	• 3 = \$M in revenue
	• 4 = \$M revenue under management
	• 5 = Active Oracle node
	• 6 = Cluster
	 7 = Compensated individual
	• 8 = Connector
	• 9 = Developer
	• 10 = Drive
	• 11 = Electronic order line
	• 12 = Employees
	• 13 = Expense report
	• 14 = External connector
	• 15 = External recipient
	• 16 = Field technician
	• 17 = Floating user
	• 18 = Form
	• 19 = Front end GB
	• 20 = Front end TB
	• 21 = FTE student
	• 22 = Gateway
	• 23 = Gigabyte
	• 24 = Guest
	• 25 = Host

• 26 = Internet connector

Details

- 27 = IP
- 28 = Mailbox
- 29 = OSE
- 30 = Partner organization
- 31 = Person
- 32 = Per 1000 invoice lines
- 33 = Per 1000 records
- 34 = Per rule set
- 35 = Per tape drive
- 36 = Port
- 37 = Record
- 38 = Server bundle
- 39 = Service order line

	• 184 (IBM RVU) = Transportation Events Per Calendar Month
	• 185 (IBM RVU) = Value Units
	• 186 (IBM RVU) = Virtual Servers
	• 187 (IBM RVU) = Web Pages.
SoftwareLicenseTypeID	<i>Type</i> : integer. Key
	The software license type to which this metric applies. Foreign key to the SoftwareLicenseType table.
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a licensing metric. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters)
	The text to display if the ResourceName has no translation.

SoftwareLicensePartitioningDefault Table

SoftwareLicensePartitioningDefault contains the sub-capacity licensing rules: the types of virtual machines/partitions and pools which each license type treats as "hard" (able to put a hard limit on processor usage).

Database Column	Details
SoftwareLicenseTypeID	<i>Type:</i> integer. Key The software license type to which this rule applies. Foreign key to the SoftwareLicenseType table.
VMTypeID	<i>Type</i> : integer. Key. Nullable A virtual machine/partition type that is "hard" for the purposes of this license type. Foreign key to the VMType table.
VMPoolTypeID	<i>Type:</i> integer. Key. Nullable A virtual machine/partition pool type that is "hard" for the purposes of this license type. Foreign key to the VMPoolType table.

Table 434: Database columns for SoftwareLicensePartitioningDefault table

SoftwareLicensePoints Table

The SoftwareLicensePoints table holds the criteria for points-based licenses.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 435: Database columns for SoftwareLicensePoints table

Database Column	Details
SoftwareLicensePointsID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a software license criterion.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license to which this information applies. Foreign key to the
	SoftwareLicense table.
ProcessorType	<i>Type:</i> text (max 256 characters). Key
	The type of processor a computer must have for this criterion to apply, such as "AMD" or "Intel".
ComputerModelNo	<i>Type:</i> text (max 128 characters). Key
	The model number a computer must have for this criterion to apply, such as "IBM PS701" or "IBM JS12".
MinCores	<i>Type:</i> integer. Key
	The minimum number of processor cores a computer must have for this criterion to apply.

Database Column	Details
MaxCores	<i>Type:</i> integer. Key
	The maximum number of processor cores a computer must have for this criterion to apply.
MinProcessors	<i>Type:</i> integer. Key
	The minimum number of processors a computer must have for this criterion to apply.
MaxProcessors	<i>Type:</i> integer. Key
	The maximum number of processors a computer must have for this criterion to apply.
MinSockets	<i>Type:</i> integer. Key
	The minimum number of processor sockets a computer must have for this criterion to apply.
MaxSockets	<i>Type:</i> integer. Key
	The maximum number of processor sockets a computer must have for this criterion to apply.
MinCoresPerSocket	<i>Type:</i> integer. Key
	The minimum number of processor cores per socket a computer must have for this criterion to apply.
MaxCoresPerSocket	<i>Type:</i> integer. Key
	The maximum number of processor cores per socket a computer must have for this criterion to apply.
Points	<i>Type:</i> decimal
	The points value per core or processor.

SoftwareLicensePointsConsumedData Table

SoftwareLicensePointsConsumed records how many license entitlements have been consumed for a given license by a given computer.

Database Column	Details
ComplianceComputerID	<i>Type</i> : integer. Key The computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type:</i> integer. Key The license being assessed. Foreign key to the SoftwareLicense table.
LicensesConsumed	<i>Type</i> : integer The number of entitlements (or points) consumed for the license on the computer.
CalculatedConsumption	<i>Type:</i> integer The calculated consumption value for this license assignment before exemptions or overrides are considered.
LicensesUsed	<i>Type:</i> integer How many of the points consumed are for installations actually being used.
LicenseMeasurementID	<i>Type</i> : integer. Key The license measurement ID. Foreign key to the LicenseMeasurement table.

Table 436: Database columns for SoftwareLicensePointsConsumedData table

SoftwareLicensePointsConsumedReasonData Table

This table stores information about why an entry in SoftwareLicensePointsConsumed exists.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 437: Database columns for SoftwareLicensePointsConsumedReasonData table

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key The computer under examination. Foreign key to the ComplianceComputer table.
SoftwareLicenseID	<i>Type</i> : integer. Key The license being assessed. Foreign key to the SoftwareLicense table.

Database Column	Details
ReasonTypeID	<i>Type</i> : integer The reason for the points to be consumed here. Foreign key to the SoftwareLicensePointsConsumedReasonType table.
LicenseMeasurementID	<i>Type:</i> integer. Key The license measurement ID. Foreign key to the LicenseMeasurement table.

SoftwareLicensePointsConsumedReasonType Table

SoftwareLicensePointsConsumedReasonType stores all the different important attributes that can be stored against a SoftwareLicensePointsConsumed record.

Database Column	Details
ReasonTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifer for the SoftwareLicensePointsConsumedReasonType table.
ReasonResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing the reason a license was linked to a title. Foreign key to the ComplianceResourceString table.
ReasonDefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the reason resource string has no translation.

 Table 438: Database columns for SoftwareLicensePointsConsumedReasonType table

SoftwareLicensePointsDefault Table

The SoftwareLicensePointsDefault table stores a collection of default license points associated with a particular license type.

Table 439: Database columns for SoftwareLicensePointsDefault	table
--	-------

Database Column	Details
SoftwareLicensePoints DefaultID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a default points record.
SoftwareLicenseTypeID	<i>Type:</i> integer. Key The software license type to which this points record applies. Foreign key to the SoftwareLicenseType table.

Database Column	Details
ProcessorType	<i>Type:</i> text (max 256 characters)
	The type of processor a computer must have for this criterion to apply, such as "AMD" or "Intel".
ComputerModelNo	<i>Type:</i> text (max 128 characters)
	The model number a computer must have for this criterion to apply, such aas "IBM PS701" or "IBM JS12".
MinCores	<i>Type</i> : integer
	The minimum number of processor cores a computer must have for this criterion to apply.
MaxCores	<i>Type</i> : integer
	The maximum number of processor cores a computer must have for this criterion to apply.
MinProcessors	<i>Type:</i> integer
	The minimum number of processors a computer must have for this criterion to apply.
MaxProcessors	<i>Type:</i> integer
	The maximum number of processors a computer must have for this criterion to apply.
MinSockets	<i>Type</i> : integer
	The minimum number of processor sockets a computer must have for this criterion to apply.
MaxSockets	<i>Type</i> : integer
	The maximum number of processor sockets a computer must have for this criterion to apply.
MinCoresPerSocket	<i>Type</i> : integer
	The minimum number of processor cores per socket a computer must have for this criterion to apply.
MaxCoresPerSocket	<i>Type</i> : integer
	The maximum number of processor cores per socket a computer must have for this criterion to apply.
Points	<i>Type</i> : decimal
	The points value per core or processor.
DateEffective	<i>Type:</i> datetime. Nullable
	The date from which these default values are effective. This is used to group sets of rows into sets.

Database Column

Details

Description

Type: text (max 1024 characters). Nullable A description of the points rules.

SoftwareLicensePointsRule Table

The SoftwareLicensePointsRule table stores individual license points rules (mapping of criteria to point value) belonging to a given points rule set.

Table 440: Database columns for Se	oftwareLicensePointsRule table
------------------------------------	--------------------------------

Database Column	Details
SoftwareLicensePoints	<i>Type:</i> integer. Key. Generated ID
RuleID	A unique identifier for a points rule record.
SoftwareLicensePoints	<i>Type:</i> integer. Key
RuleSetID	The set to which this rule applies. Foreign key to the
	SoftwareLicensePointsRuleSet table.
IsCustom	<i>Type:</i> boolean. Key
	True if the rule is managed by the customer (versus by the ARL).
Description	<i>Type:</i> text (max 1024 characters). Nullable
	A human-readable description or identifier for the rule.
Points	<i>Type:</i> decimal. Key
	The points value per core, processor, user, or other resource metric.
ProcessorType	<i>Type:</i> text (max 256 characters)
	The type of processor a computer must have for this criterion to apply, such as "AMD" or "Intel".
ComputerModelNo	<i>Type:</i> text (max 128 characters)
	The model number a computer must have for this criterion to apply, such as "IBM PS701" or "IBM JS12".
MinCores	<i>Type:</i> integer
	The minimum number of processor cores a computer must have for this criterion to apply.

Database Column	Details
MaxCores	<i>Type</i> : integer The maximum number of processor cores a computer must have for this criterion to apply.
MinProcessors	<i>Type</i> : integer The minimum number of processors a computer must have for this criterion to apply.
MaxProcessors	<i>Type</i> : integer The maximum number of processors a computer must have for this criterion to apply.
MinSockets	<i>Type:</i> integer The minimum number of processor sockets a computer must have for this criterion to apply.
MaxSockets	<i>Type</i> : integer The maximum number of processor sockets a computer must have for this criterion to apply.
MinCoresPerSocket	<i>Type</i> : integer The minimum number of processor cores per socket a computer must have for this criterion to apply.
MaxCoresPerSocket	<i>Type:</i> integer The maximum number of processor cores per socket a computer must have for this criterion to apply.
MinResource	<i>Type:</i> decimal. Key The minimum resource value for an IBM RVU license for this criterion to apply.
MaxResource	<i>Type</i> : decimal. Key The maximum resource value for an IBM RVU license for this criterion to apply.
MinUsers	<i>Type:</i> integer. Key The minimum number of users relevant to an IBM UVU license for this criterion to apply.
MaxUsers	<i>Type:</i> integer. Key The maximum number of users relevant to an IBM UVU license for this criterion to apply.
MinClockSpeed	<i>Type</i> : integer The minimum value of the highest frequency of fastest processor, measured in megaherz, for this criterion to apply.

Database Column	Details
MaxClockSpeed	<i>Type:</i> integer
	The maximum value of the highest frequency of fastest processor, measured in megaherz, for this criterion to apply.
MinPurchaseDate	<i>Type:</i> datetime. Nullable
	The earliest date on which the asset must have been purchased for this criterion to apply.
MaxPurchaseDate	<i>Type:</i> datetime. Nullable
	The latest date on which the asset must have been purchased for this criterion to apply.
CoverOnPremise	<i>Type:</i> boolean
	If the value $True$, the points rule created can be used on-premises devices
CoverAllCloudProviders	<i>Type</i> : boolean
	If the value True, the points rule created can be used on all cloud service
	providers. If the value is False, list of cloud providers could be found from
	SoftwareLicensePointsRuleCloudServiceProvider table
IsShared	<i>Type:</i> boolean

SoftwareLicensePointsRuleCloudServiceProvider Table

SoftwareLicensePointsRuleCloudServiceProvider contains the cloud service providers supported by points rule.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 441: Database columns for SoftwareLicensePointsRuleCloudServiceProvider table

Database Column	Details
SoftwareLicensePoints RuleCloudService ProviderID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a points rule and a cloud service provider.
SoftwareLicensePoints RuleID	<i>Type:</i> integer. Key Identifies a software license. Foreign key to the SoftwareLicensePointsRule table.

Database Column	Details
CloudServiceProviderID	<i>Type:</i> integer. Key Identifies a cloud service provider. Foreign key to the CloudServiceProvider table.
IsShared	<i>Type:</i> boolean

SoftwareLicensePointsRuleSet Table

The SoftwareLicensePointsRuleSet table stores named sets of points rules associated with a particular license type.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 442: Database columns for SoftwareLicensePointsRule	Set table
---	-----------

Database Column	Details
SoftwareLicensePoints RuleSetID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a points rule set record.
SoftwareLicenseTypeID	<i>Type:</i> integer. Key The software license type to which this set applies. Foreign key to the SoftwareLicenseType table.
Description	<i>Type:</i> text (max 256 characters). Key. Nullable A human-readable description or identifier for the set.
IsShared	<i>Type</i> : boolean

SoftwareLicenseProcessorPointsData Table

Stores the number of processors/cores on which points-based licensed software is installed and used, and the corresponding points and factors.

Database Column	Details
ComplianceComputerID	<i>Type</i> : integer. Key The computer under examination. Foreign key to the ComplianceComputerSnapshot table.
SoftwareLicenseID	<i>Type:</i> integer. Key The license being assessed. Foreign key to the SoftwareLicenseSnapshot table.
InstalledCount	<i>Type</i> : decimal The number of processors/cores on which a software title licensed by the license is installed.
UsedCount	<i>Type:</i> decimal The number of processors/cores on which a software title licensed by the license is used.
CapacityCount	<i>Type</i> : decimal The number of processors/cores that apply to a software title licensed by the license under full capacity counting rules.
PointsFactor	<i>Type</i> : decimal The number of points consumed per processor/core on this computer for this license.
InstalledPoints	<i>Type</i> : integer The number of processor/core points required to cover the above InstalledCount.
UsedPoints	<i>Type</i> : integer The number of processor/core points required to cover the above UsedCount.
CapacityPoints	<i>Type</i> : integer The number of processor/core points required to cover the above CapacityCount.
LicenseMeasurementID	<i>Type</i> : integer. Key The license measurement ID. Foreign key to the LicenseMeasurement table.
CalculatedConsumption	<i>Type</i> : integer The calculated consumption value for this license assignment before exemptions or overrides are considered.
Overridden	<i>Type</i> : boolean Whether this consumption value was the result of an override.

Table 443: Database columns for SoftwareLicenseProcessorPointsData table

SoftwareLicenseProduct Table

SoftwareLicenseProduct contains the set of SoftwareTitleProducts covered by a SoftwareLicense. Their product specific use rights on this license are also covered.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseProductID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a software license product.
SoftwareLicenseID	<i>Type:</i> integer. Key
	License whose property value is being stored. Foreign key to the SoftwareLicense table
SoftwareTitleProductID	<i>Type:</i> integer. Key. Nullable
	The product covered by this license. Foreign key to the SoftwareTitleProduct table.
CurrentSoftwareTitleID	<i>Type</i> : integer. Nullable
	Identifies the current application for this product on this license (which may
	change over time as upgrade rights are applied). Foreign key to the
	SoftwareTitle table.
Supplementary	<i>Type:</i> boolean
	Whether this product on this license is supplementary (counted for consumption) or not.
MeasuredForCompliance	<i>Type:</i> boolean
	Whether this product on this license is measured for compliance risks.
ProductRatio	<i>Type:</i> integer
	If this product is supplementary on the license, the number of entitlements consumed related to the entitlements consumed for the parent product.
ParentProductRatio	<i>Type:</i> integer
	If this product is supplementary on the license, the number of entitlements consumed related to the entitlements consumed for the supplementary product.

Table 444: Database columns for SoftwareLicenseProduct table

Database Column	Details
InheritDowngradeFrom Contract	<i>Type:</i> boolean Set this field to True if this license inherits its downgrade rights from a contract. If False (the default), downgrade rights must be configured directly on the license properties.
InheritDowngradeFrom ContractID	<i>Type:</i> integer. Nullable If the previous field is True, this is the contract that downgrade rights are inherited from. Foreign key to the Contract table.
InheritUpgradeFrom Contract	<i>Type:</i> boolean Set this field to True if this license inherits its upgrade rights from a contract. If False (the default), upgrade rights must be configured directly on the license properties.
InheritUpgradeFrom ContractID	<i>Type:</i> integer. Nullable If the previous field is True, this is the contract that downgrade rights are inherited from. Foreign key to the Contract table.
DowngradeEnabled	<i>Type</i> : boolean If this field is True, this license can cover previous releases, or lower editions, of applications linked to this license. If this field is False (the default), there is no downgrade right conferred by this license.
DowngradeToVersion	<i>Type</i> : boolean If this field is True, the license covers previous releases (with the same edition) of the primary application. If this field is False (the default), earlier versions of the primary application are not covered by downgrade rights.
DowngradeToVersionID	<i>Type</i> : integer. Nullable If the previous field is True and the value of this field is NULL, downgrade rights cover all earlier releases (with the same edition) of the primary application. If not NULL, downgrade rights cover all versions of the primary application down to and including this version. Foreign key to the SoftwareTitleVersion table.
DowngradeToEdition	<i>Type:</i> boolean If this field is True, the license covers lower editions (with the same version) of the primary application. If this field is False (the default), lower editions of the primary application are not covered by downgrade rights.

Database Column	Details
DowngradeToEditionID	<i>Type:</i> integer. Nullable If the previous field is True and the value of this field is NULL, downgrade rights cover all lower editions (with the same version) of the primary application. If not NULL, downgrade rights cover all editions of the primary application down to and including this edition. Foreign key to the SoftwareTitleEdition table.
UpgradeEnabled	<i>Type:</i> boolean If this field is True, the license can cover future releases (with the same edition) of the primary application. If this bit is False (the default), there is no upgrade right conferred by this license.
UpgradeToVersion	<i>Type:</i> boolean If this field is True, the license covers later releases (with the same edition) of the primary application. If this field is False (the default), later versions of the primary application are not covered by upgrade rights.
UpgradeToVersionID	<i>Type:</i> integer. Nullable If the previous field is True and the value of this field is NULL, upgrade rights cover all later version (with the same edition) of the primary application. If not NULL, upgrade rights cover all versions of the primary application up to and including this version. Foreign key to the SoftwareTitleEdition table.
UpgradeUntil	<i>Type:</i> boolean If this bit is 1, the upgrade right covers future releases of applications that get linked to this license, provided that the release date of each version is before (or on) a specified date. If this bit is zero (the default), the upgrade right is not date limited.
UpgradeUntilDate	<i>Type</i> : datetime. Nullable If this field is set, only applications released before this date are covered by upgrade rights.

SoftwareLicensePropertyValue Table

For each end-user, SoftwareLicensePropertyValue stores the values for the custom properties defined in SoftwareLicenseTypeProperty.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicense	<i>Type:</i> integer. Key. Generated ID
PropertyValueID	A unique identifier for a property value.
SoftwareLicenseType	<i>Type:</i> integer. Key
PropertyID	The property whose value is being stored. The type of the license should match the type that the property is associated with. Foreign key to the SoftwareLicenseTypeProperty table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	License whose property value is being stored. Foreign key to the SoftwareLicense table
PropertyValue	<i>Type:</i> text (max 4000 characters)
	The property value.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.

Table 445: Database columns for SoftwareLicensePropertyValue table

SoftwareLicenseProposalStatus Table

SoftwareLicenseProposalStatus is a static table listing all of the states that a license change proposal can be in.

Database Column	Details
SoftwareLicense ProposalStatusID	 Type: integer. Key. Generated ID A unique identifier for each SoftwareLicenseProposalStatus. Possible values and the corresponding default strings are: 1 = Pending 2 = Accepted 3 = Ignored
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing the license change proposal state. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the state resource string has no translation.

Table 446: Database columns for SoftwareLicenseProposalStatus table

SoftwareLicensePurchaseType Table

SoftwareLicensePurchaseType holds a list of purchase types for licenses.

Details
 Type: integer. Key. Generated ID A unique identifier for each SoftwareLicensePurchaseType. Possible values and the corresponding default strings are: 1 = Volume 2 = Shrink Wrap 3 = OEM 4 = Subscription.
Type: text (max 256 characters). KeyThe unique name of the localizable resource string representing a purchasetype. Foreign key to the ComplianceResourceString table.Type: text (max 100 characters)The text to display if the type resource string has no translation.

SoftwareLicenseReservation Table

The SoftwareLicenseReservation table lists all reservations for a license entitlement for an application.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicense	<i>Type:</i> integer. Key. Generated ID
ReservationID	A unique identifier for this reservation.
SoftwareTitleID	<i>Type:</i> integer. Key
	The application being reserved. Foreign key to the SoftwareTitle table.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable
	The license affected by this reservation, null if any license for the application can be consumed. Foreign key to the SoftwareLicense table.
ComplianceComputerID	<i>Type:</i> integer. Key
	The computer making the reservation. Foreign key to the
	ComplianceComputer table.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	The user making the reservation. Foreign key to the ComplianceUser table.
PointsReserved	<i>Type:</i> integer
	The number of points this reservation will ultimately consume.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
SoftwareLicense	<i>Type:</i> integer
ReservationTypeID	The type of reservation.
SoftwareLicense	<i>Type:</i> integer
ReservationStatusID	Stores the status of the reservation

Table 448: Database columns for SoftwareLicenseReservation table

SoftwareLicenseReservationNecessityCheckResult Table

The SoftwareLicenseReservationNecessityCheckResult table saves the results of the necessity to do software license reservation for a license entitlement for an application.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicense ReservationNecessity CheckResultID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this reservation necessity check result.
SoftwareTitleID	<i>Type:</i> integer. Key The application being reserved. Foreign key to the SoftwareTitle table.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable The license affected by this reservation, null if any license for the application can be consumed. Foreign key to the SoftwareLicense table.
ComplianceComputerID	<i>Type:</i> integer. Key The computer making the reservation. Foreign key to the ComplianceComputer table.
ComplianceUserID	<i>Type</i> : integer. Key. Nullable The user making the reservation. Foreign key to the ComplianceUser table.
HasSecondUseRight	<i>Type:</i> boolean No reservation is actually needed because of second use right.
HasUpgradeDowngradeRight	<i>Type:</i> boolean No reservation is actually needed because of upgrade/downgrade right
HasExemptionByDeviceRole	<i>Type:</i> boolean No reservation is actually needed because of exemption by device role.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable The operator who created the record.
CreationDate	<i>Type</i> : datetime The date the record was created.

Table 449: Database columns for SoftwareLicenseReservationNecessityCheckResult table

SoftwareLicenseReservationStatus Table

The collection of status values for reservation.

Table 450: Database columns for SoftwareLicenseReservationStatus table

Database Column	Details
SoftwareLicense	<i>Type:</i> integer. Key. Generated ID
ReservationStatusID	A unique identifier for the reservation status id
SoftwareLicense	<i>Type:</i> text (max 128 characters)
ReservationStatusName	The name of the reservation status.

SoftwareLicenseReservationType Table

The collection of status values for reservation types.

Table 451: Database columns for SoftwareLicenseReservationType table

Database Column	Details
SoftwareLicense	<i>Type:</i> integer. Key. Generated ID
ReservationTypeID	A unique identifier for the reservation type id
SoftwareLicense	<i>Type:</i> text (max 128 characters)
ReservationTypeName	The name of the reservation type.

SoftwareLicenseScopeTag Table

Reserved for future development.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 452: Database columns for SoftwareLicenseScopeTag table

Database Column	Details
SoftwareLicenseID	<i>Type</i> : integer. Key Foreign key to the SoftwareLicense table.
TagID	<i>Type:</i> integer. Key Foreign key to the Tag table.

Database Column	Details
ScopeTagTypeID	<i>Type:</i> integer. Key
	Foreign key to the SoftwareLicenseScopeTagType table.

SoftwareLicenseScopeTagType Table

Reserved for future development.

Table 453: Database columns for SoftwareLicenseScopeTagType table

Database Column	Details
ScopeTagTypeID	<i>Type:</i> integer. Key. Generated ID A unique ID for this record.
TypeDescription	<i>Type:</i> text (max 50 characters). Key The text value for this type.

SoftwareLicenseScoping Table

SoftwareLicenseScoping links software licenses to enterprise groups, to restrict the rights granted by the licenses to the selected group and its descendents (license scoping).

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key The scoped license. Foreign key to the SoftwareLicense table.
GroupExID	<i>Type:</i> text (max 128 characters). Key The enterprise group that this license is restricted to. Any children of this enterprise group are also included in the scope of the license. Foreign key to the GroupEx table.

Table 454: Database columns for SoftwareLicenseScoping table

SoftwareLicenseSecondUseMappingData Table

SoftwareLicenseSecondUseMapping maps pairs of desktop computers and laptop computers against each license conferring the right of second use and covering installations on these computers.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license conferring the right of second use. Foreign key to the SoftwareLicense table.
DesktopComputerID	<i>Type:</i> integer. Key
	The desktop or primary computer on which the related software in installed. Foreign key to the ComplianceComputer table.
SecondUseComputerID	<i>Type:</i> integer. Key
	The laptop or second computer covered by this license's right of second use, relative to the installation on the primary computer tracked in the previous field. Foreign key to the ComplianceComputer table.
TotalLicenseGrabs	<i>Type:</i> integer
	For internal use only. Temporary storage for calculations of overlapping second use and multiple install rights.
IsExternalRoamingLink	<i>Type:</i> boolean
	Is this a second use link or is it actually an 'external roaming' right?

 Table 455: Database columns for SoftwareLicenseSecondUseMappingData table

SoftwareLicenseSnapshot Table

The SoftwareLicenseSnapshot table lists all the snapshotted software licenses.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 456: Database columns for SoftwareLicenseSnapshot table

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key
	The snapshotted SoftwareLicenseID.
Name	<i>Type:</i> text (max 256 characters)
	The snapshotted license name.
LicenseTypeID	<i>Type:</i> integer. Key
	The license type. Foreign key to the SoftwareLicenseType table.
SoftwareLicense	<i>Type:</i> integer. Nullable
ComplianceStatusID	The compliance status of this license. Foreign key to the
	SoftwareLicenseComplianceStatus table. Defaults to "Compliant".
Consumed	<i>Type:</i> integer. Nullable
	The snapshotted license consumed count.
PurchaseQuantity	<i>Type:</i> integer. Nullable
	The snapshotted license purchase quantity.
PurchasePrice	<i>Type:</i> currency. Nullable
	The initial purchase price of the license.
PurchasePriceRateID	<i>Type:</i> integer. Nullable
	The currency rate applied to the purchase price of the license. Foreign key to the CurrencyRate table.
LicenseMeasurementID	<i>Type:</i> integer. Key
	The snapshot ID. Foreign key to the LicenseMeasurement table.
NumberUsed	<i>Type:</i> integer. Nullable
	The snapshotted license number used count.
LastCalculatedNUPMinimum	<i>Type:</i> integer. Nullable
	The snapshotted license last calculated minimum for Oracle Named User
	Plus licenses.
CalculatedConsumed	<i>Type:</i> integer
	The calculated consumption value for this license.

SoftwareLicenseTierType Table

SoftwareLicenseTierType is a static table listing the tier types that a software license can have. Used for Tiered Device license type.

Database Column	Details
SoftwareLicenseTierTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each SoftwareLicenseTierType. Possible values and the corresponding default strings are:
	• 1 = Generic
	• 2 = Per Processor
	• 3 = Symantec Server
	• 4 = Symantec Processor Type
	• 5 = Symantec Installed Operating System.
TierTypeResourceName	<i>Type</i> : text (max 256 characters). Key. Nullable
	The unique name of the localizable resource string representing a tier type. Foreign key to the ComplianceResourceString table.
TierTypeDefaultValue	<i>Type:</i> text (max 256 characters)
	The text to display if the type resource string has no translation.
TierCodeValidationRegEx	<i>Type:</i> text (max 256 characters). Nullable
	The regular expression used to validate the tier code.
TierCodeValidationMsg	<i>Type:</i> text (max 256 characters). Nullable
ResourceName	The unique name of the localizable resource string representing the message shown when tier code validation fails. Foreign key to the ComplianceResourceString table.
TierCodeValidationMsg	<i>Type:</i> text (max 256 characters). Nullable
DefaultValue	The text to display if the resource string (for the message shown when tier code validation fails) has no translation.

Table 457: Database columns for SoftwareLicenseTierType table

SoftwareLicenseType Table

SoftwareLicenseType holds the collection of all valid license types.

Table 458: Database columns for SoftwareLicenseType table

Database Column	Details
SoftwareLicenseTypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each SoftwareLicenseType. Possible values and the corresponding default strings are:
	• 1 = Enterprise
	 2 = Device 2 = Nada Lackad
	 3 = Node-Locked 4 = User
	• 4 = User
	 5 = Concurrent User
	 6 = Appliance 7 Client Convert
	• 7 = Client Server
	• $8 = OEM$
	 9 = Evaluation 10 = Run-Time
	 11 = Device (Processor-Limited) 12 = Site
	 12 = Site 13 = Named User
	 13 - Named Oser 14 = Device (Core-Limited)
	 14 - Device (Core-Limited) 15 = Core Points
	 16 = Oracle Processor
	 17 = Oracle Named User Plus
	 18 = Processor Points
	 19 = Oracle Legacy
	 20 = Enterprise Agreement
	 21 = SAP Named User
	 22 = Microsoft Server Processor
	 23 = CAL Legacy
	 24 = Tiered Device
	 25 = IBM Processor Value Unit
	 26 = IBM Authorized User

Database Column	Details
	• 27 = IBM Concurrent User
	• 28 = IBM Floating User
	• 29 = Custom Metric
	• 30 = Processor
	• 31 = IBM Resource Value Unit
	• 32 = IBM User Value Unit
	• 33 = Microsoft Server Core
	• 34 = Oracle User
	• 35 = SAP Package
	• 36 = Microsoft SCCM Client Device
	• 37 = Microsoft SCCM Client User
	• 38 = Microsoft Developer Network
	• 39 = Microsoft Device CAL
	• 40 = Microsoft User CAL
	 41 = Microsoft Server/Management Core
	• 42 = SaaS User
TypeResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a license type. Foreign key to the ComplianceResourceString table.
TypeDefaultValue	<i>Type</i> : text (max 100 characters)
	The text to display if the type resource string has no translation.
XMLFile	<i>Type:</i> text. Nullable
	The layout of the property dialog for this type of computer, stored in XML format.
CustomProcedureName	<i>Type:</i> text (max 256 characters). Nullable
	The stored procedure used to assign licenses for this license type.
DoesLicenseAllowUser	<i>Type:</i> boolean
Allocations	Set this field to True if the license supports allocations to individual end- users. When False, it cannot be allocated to end-users.

Database Column	Details
DoesLicenseAllow	<i>Type</i> : boolean
ComputerAllocations	Set this field to True if the license supports allocations to individual computers. When it is False, it cannot be allocated to computers. (Note that for a custom license type, both this and the previous field may be set at the same time.)
DoesLicenseAllow	<i>Type</i> : boolean
VirtualApplications	Set this field to True if the license supports virtual applications. When it is False, it cannot be consumed by virtual applications. (Note that virtual applications have AccessModeID > 1.)
CanConvertToAndFromType	<i>Type</i> : boolean
	Set this field to True if an operator is allowed to change the type of this license after it has been created. This field also determines whether this license type is included in the list of types that can be converted to. Oracle licenses, for example, cannot be converted to or from.
ExclusionReasonName	<i>Type</i> : text (max 256 characters). Nullable
	The unique name of the localizable resource string representing the reason why an installation linked to a license of this type may appear in the Unlicensed Installs node. Foreign key to the ComplianceResourceString table.
ExclusionReasonDefault	<i>Type:</i> text (max 500 characters)
	The text to display if the reason resource string has no translation.
IncludeInSQLAssignment	<i>Type</i> : boolean
	Set this field to True if licenses of this type should be processed during the SQL part of the license reconciliation process.
CalculateCompliance	<i>Type:</i> boolean
	When this field is True (the default), and a SoftwareLicense of this type also has its CalculateCompliance field set to True (the default), that license must have its consumption calculated from imported inventory. When False, the compliance state of licenses with this type must be imported or otherwise set manually, not calculated.
ReconcileAsSoftware	<i>Type</i> : integer. Nullable
LicenseTypeID	If specified, treat this license type as if it were another for license reconciliation purposes. Foreign key to another type in this SoftwareLicenseType table.
Enabled	<i>Type</i> : boolean
	Indicates whether this license type is enabled

Database Column	Details
CoverOnPremise	<i>Type:</i> boolean If the value True, the license created for this type will have on-premise selected in the use rights.
CoverAllCloudProviders	<i>Type:</i> boolean If the value True, the license created for this type will have all cloud service provider selected in the use rights. If the value is False, the specific cloud provider values could be found from SoftwareLicenseTypeCloudServiceProviderDefault table

SoftwareLicenseTypeChangeProposal Table

The SoftwareLicenseTypeChangeProposal table is used to store a proposed change of type for a particular software license. The changes have been inferred from changes to the license definition used to create the software license.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseType	<i>Type:</i> integer. Key. Generated ID
ChangeProposalID	Primary key for the SoftwareLicenseTypeChangeProposal table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	Foreign key to the SoftwareLicense table.
SoftwareLicense	<i>Type:</i> integer
DefinitionID	Foreign key to the SoftwareLicenseDefinition table.
LicenseDefinitionVersion	<i>Type:</i> integer
	The version of the license definition that has been used for these proposed changes.
SoftwareLicenseUse	<i>Type:</i> integer
RightNameID	The proposed use right being changed on the software license.
SoftwareLicenseTypeID	<i>Type:</i> integer. Key
	The proposed license type for the software license.

Table 459: Database columns for SoftwareLicenseTypeChangeProposal table

Database Column	Details
OldSoftwareLicenseTypeID	<i>Type:</i> integer
	The existing license type for the software license.
SoftwareLicense	<i>Type:</i> integer
ProposalStatusID	The state of this software license change proposal.
Conflicted	<i>Type:</i> boolean
	Whether this license type change proposal conflicts with another type proposed for the same license.
CreationUser	<i>Type</i> : text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type</i> : datetime
	The date the record was created.
UpdatedUser	<i>Type</i> : text (max 128 characters). Nullable
	The operator who updated the record.
UpdatedDate	<i>Type</i> : datetime. Nullable
	The date the record was updated.

SoftwareLicenseTypeCloudServiceProviderDefault Table

The SoftwareLicenseTypeCloudServiceProvider table stores default cloud service providers supported by a software license type.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 460: Database columns for SoftwareLicenseTypeCloudServiceProviderDefault table

Database Column	Details
SoftwareLicenseTypeID	<i>Type:</i> integer. Key Identifies a software license type. Foreign key to the SoftwareLicenseType table
CloudServiceProviderID	<i>Type:</i> integer. Key Identifies a cloud service provider. Foreign key to the CloudServiceProvider table.

Database Column

Details

IsShared

Type: boolean

SoftwareLicenseTypePriority Table

SoftwareLicenseTypePriority holds the priority order of license types.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 461: Database columns for SoftwareLicenseTypePriority table

Database Column	Details
SoftwareLicenseTypeID	<i>Type</i> : integer. Key The software license type to which this priority applies. Foreign key to the SoftwareLicenseType table.
CompliancePriority	<i>Type</i> : integer The priority order of the license type when calculating compliance. Licenses with higher priority will be consumed first.

SoftwareLicenseTypeProperty Table

SoftwareLicenseTypeProperty defines extra custom properties for all end-users.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 462: Database columns for SoftwareLicenseTypeProperty table

Database Column	Details
SoftwareLicenseType PropertyID	<i>Type:</i> integer. Key. Generated ID A unique identifier for an individual property.
PropertyName	<i>Type:</i> text (max 256 characters). Key The name of the property.

Database Column	Details
SoftwareLicenseTypeID	<i>Type:</i> integer. Key License type with which this property is associated. Foreign key to the LicenseType table.
CustomPropertyDisplayX MLID	<i>Type:</i> integer. Nullable Foreign key to a record in the CustomPropertyDisplayXML table, describing how to show the property on a property dialog.

SoftwareLicenseUseRight Table

SoftwareLicenseUseRight contains licensing rules most of which can be set by PURL.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 463: Database columns for SoftwareLicenseUseRight table

Database Column	Details
SoftwareLicenseUseRightID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier
SoftwareLicenseID	<i>Type:</i> integer. Key
	A unique identifier for a software license.
ReassignmentTimeLimit	<i>Type:</i> boolean
Applies	If 1 then the license cannot be reassigned for some period of time (example is Microsoft 90 day rule)
ReassignmentTimeLimit	<i>Type:</i> integer. Nullable
	The period (in days) within which the license cannot be reassigned
LicenseMobilityApplies	<i>Type:</i> boolean
	1 if eligible for bringing your own license to cloud environment
NumberOfOSEPerLicense	<i>Type:</i> integer. Nullable
	Number of OSE per license
NumberOfProcessorsPerOSE	<i>Type:</i> integer. Nullable
	Number of processors per OSE
TotalNumberOfCoresPerV	<i>Type:</i> integer. Nullable
MPerLicense	Total number of cores per VM per license

Database Column	Details
NumberOfCoresPerSocket	<i>Type:</i> integer. Nullable
	Number of cores per socket
ThirdPartyAccessAllowed	<i>Type</i> : boolean
	Access to applications is allowed to third party users. This field is defaulted to True
PURLComment	<i>Type:</i> text. Nullable
	Additional information provided by PURL
AllowExternalRoamingUse	<i>Type:</i> boolean. Nullable
	Set this field to True if license allows external roaming use. This field is defaulted to False. This is applicable for both device and user licenses and is related to virtual application access. If 1, this license will consume 1 entitlement per each user. If 0, this license will consume 1 license per each user device. And, if NULL, ignore virtual application access. This can be used in conjunction with VirtualApplicationAccessMaximumUsagePeriod.
MeasurementDate	<i>Type:</i> datetime. Nullable
	The date of the license measurment.
ConsumptionUnit	<i>Type</i> : text. Nullable
	Unit description to describe the consumption amount.
TargetOperatingSystem	Type: integer
TypeID	Type of Operating Systems to target
VirtualApplication	<i>Type</i> : integer. Nullable
AccessMaximumUsagePeriod	This is a rule for virtual application access. This is used in conjunction with the AllowExternalRoamingUse. For Device licenses, a license will consume 1 entitlement per each user device when used in period specified here. For user licenses, if 1, this license will consume only when used in period specified here.
ExemptCALs	<i>Type:</i> boolean
	If the value True, clients accessing servers that consume this license will be exempted from CAL (no CALs required). Only applicable to Microsoft Server
	Processor, Microsoft Server Core and Device license types.
CoverOnPremise	<i>Type:</i> boolean
	If the value True, the license is eligible for use on on-premise platform.
CoverAllCloudProviders	<i>Type:</i> boolean
	If the value True, the license is eligible for use on all cloud platforms. If the value is False, the specific cloud provider values could be found from SoftwareLicenseCloudServiceProvider table.

Database Column	Details
MinimumCoresPerProcessor	<i>Type:</i> integer. Nullable Specifies minimum number of cores need to be licensed per processor.
MinimumCoresPerHost	<i>Type:</i> integer. Nullable Specifies minimum number of cores need to be licensed per server.

SoftwareLicenseUseRightIBM Table

SoftwareLicenseUseRightIBM contains IBM licensing rules most of which can be set by PURL.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 464: Database columns for SoftwareLicenseUseRightIBM table

Database Column	Details
SoftwareLicenseUse RightIBMID	<i>Type:</i> integer. Key. Generated ID A unique identifier
SoftwareLicenseID	<i>Type:</i> integer. Key A unique identifier for a software license.
PVULimitApplies	<i>Type</i> : boolean If 1 then PVU limits apply
PVULimit	<i>Type</i> : integer. Nullable PVU limit

SoftwareLicenseUseRightName Table

SoftwareLicenseUseRightName is a static table listing all of the use rights that can be applied to a software license.

Table 465: Database columns for SoftwareLicenseUseRightName table

Database Column	Details
SoftwareLicenseUse RightNameID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each SoftwareLicenseUseRightName. Possible values and the corresponding default strings are:
	 1 = License type
	• 2 = Cover installs on virtual machines
	• 3 = Limit number of virtual installs
	• 4 = Number of allowed virtual installs
	• 5 = Limit virtual installs includes host
	• 6 = Use host processor information
	• 7 = Allow IBM PVU sub-capacity from non ILMT
	• 8 = Limit number of applications each license point covers
	• 9 = Number of application installs allowed per license point
	• 10 = Limit number of computers user license can be installed on
	• 11 = Number of computers allowed per license point
	• 12 = Minimum number of users
	• 13 = Minimum number of users multiplied by processors
	• 14 = Second usage work laptop
	 15 = Second usage at home
	 16 = Downgrade enabled
	• 17 = Downgrade to version
	• 18 = Downgrade to version ID
	• 19 = Downgrade to edition
	• 20 = Downgrade to edition ID
	• 21 = Upgrade enabled
	• 22 = Upgrade to version
	• 23 = Upgrade to version ID
	• 24 = Upgrade until
	• 25 = Upgrade until date
	• 26 = Reassignment time limit applies

Database Column	Details
	• 27 = Reassignment time limit
	• 28 = License mobility applies
	• 29 = Number of OSE per license
	• 30 = Number of processors per OSE
	• 31 = Total number of cores per VM per license
	• 32 = Number of cores per socket
	• 33 = Third party access allowed
	• 34 = PURL comment
	• 35 = Allow external roaming use
	• 36 = Measurement date
	• 37 = Consumption unit
	• 38 = PVU limit applies
	• 39 = PVU limit
	• 40 = Points rule set
	• 41 = Minimum number of processors
	• 42 = Minimum number of licenses per virtual machine
	• 43 = Number of sockets
	• 44 = User multiplier external
	• 45 = User multiplier infrequent
	• 46 = Exempted roles
	• 47 = Exempted role limit
	• 48 = Measure for compliance
	• 49 = Ratio from primary
	• 50 = Ratio to primary
	• 51 = Exempt CALs
	• 52 = Minimum cores per processor

• 53 = Minimum cores per host

Database Column	Details
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing the proposed action. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the state resource string has no translation.

SoftwareLicenseUseRightProposal Table

The SoftwareLicenseUseRightProposal table is used to store a summary of use right changes to a particular software license. The changes have been inferred from changes to the license definition used to create the software license.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareLicenseUse	<i>Type:</i> integer. Key. Generated ID
RightProposalID	Primary key for the SoftwareLicenseUseRightProposal table.
SoftwareLicenseID	<i>Type:</i> integer. Key
	Foreign key to the SoftwareLicense table.
SoftwareLicense	<i>Type:</i> integer
DefinitionID	Foreign key to the SoftwareLicenseDefinition table.
LicenseDefinitionVersion	<i>Type:</i> integer
	The version of the license definition that has been used for these proposed changes.
SoftwareLicenseUse	<i>Type:</i> integer. Key
RightNameID	The proposed use right being changed on the software license.
SoftwareTitleProductID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the SoftwareTitleProduct table.
Enabled	<i>Type:</i> boolean. Key. Nullable
	Is this use right being enabled?

 Table 466: Database columns for SoftwareLicenseUseRightProposal table

Database Column	Details
MD5Value	<i>Type:</i> text (max 32 characters). Key. Nullable
	The MD5 of Value in Hex.
Value	<i>Type</i> : text (max 4000 characters). Nullable
	The proposed value for this use right.
OldValue	<i>Type:</i> text (max 4000 characters). Nullable
	The existing value for this use right.
RelatedID	<i>Type</i> : integer. Nullable
	The database ID of the proposed object associated with this use right.
OldRelatedID	<i>Type</i> : integer. Nullable
	The database ID of the old object associated with this use right.
SoftwareLicense	<i>Type</i> : integer
ProposalStatusID	The state of this software license change proposal.
Conflicted	<i>Type</i> : boolean
	Whether this license type change proposal conflicts with another type proposed for the same license.
ContractInherited	<i>Type</i> : boolean
	Whether this license type change proposal is for a use right currently inherited from contract by the license.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type</i> : datetime
	The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who updated the record.
UpdatedDate	<i>Type</i> : datetime. Nullable
	The date the record was updated.

SoftwareLifeCycle Table

Table 467: Database columns for SoftwareLifeCycle table

Database Column	Details
SoftwareLifeCycleID	<i>Type:</i> integer. Key. Generated ID A unique identifier for an ARL published software life cycle.
SoftwareLifeCycleUID	<i>Type:</i> text (max 64 characters). Key Factory generated identifier
Name	<i>Type:</i> text (max 350 characters) Name of the software life cycle published by software publisher
AvailabilityDate	<i>Type:</i> datetime. Nullable The availability date.
EndOfAvailabilityDate	<i>Type:</i> datetime. Nullable The end of availability date.

SoftwareRecognition Table

Table 468: Database columns for SoftwareRecognition table

Database Column	Details
SoftwareRecognitionID	<i>Type:</i> text (max 30 characters). Key Factory generated identity.
UpdateMode	<i>Type:</i> text (max 20 characters). Nullable Update behavior.
LastCollectiveUpdated	<i>Type:</i> datetime. Nullable Last updated datetime by ARL on all software titles and evidence
LastLinkUpdated	<i>Type:</i> datetime. Nullable Last updated datetime by ARL on the software title links
LastRecordUpdated	<i>Type:</i> datetime. Nullable Last updated datetime by ARL on the software title or evidence records. To know which record this column refers to, see TypeOfID.
LastCollectiveChecksum	<i>Type:</i> integer. Nullable Last collective checksum on successful ARL update

	Details
LastLinkChecksum	<i>Type:</i> integer. Nullable
	Last link checksum on successful ARL update
LastRecordChecksum	Type: integer. Nullable
	Last record checksum on successful ARL update. To know which record this column refers to, see TypeOfID.
LastCollectiveUpdate	<i>Type:</i> integer. Nullable
Result	Last collective ARL update result
LastLinkUpdateResult	<i>Type</i> : integer. Nullable
	Last ARL link update result
	<i>Type</i> : integer. Nullable
	Last ARL record update result
RecordAdoptedByARL	<i>Type</i> : boolean
	When an existing customer record is updated by the ARL, this flag will be set
SoftwareTitleID	<i>Type</i> : integer. Key. Nullable
	The related SoftwareTitle
ChildSoftwareTitleID	<i>Type</i> : integer. Key. Nullable
	The related child SoftwareTitle
SoftwareTitleProductID	<i>Type:</i> integer. Key. Nullable
	The related SoftwareTitleProduct
SoftwareTitleVersionID	<i>Type:</i> integer. Key. Nullable
	The related SoftwareTitleVersion
SoftwareTitleEditionID	<i>Type:</i> integer. Key. Nullable
	The related SoftwareTitleEdition
SoftwareTitlePublisherID	<i>Type:</i> integer. Key. Nullable
	The related SoftwareTitlePublisher
FileEvidenceID	<i>Type:</i> integer. Key. Nullable
	The related FileEvidence
InstallerEvidenceID	<i>Type:</i> integer. Key. Nullable
	The related InstallerEvidence
WMIEvidenceID	<i>Type:</i> integer. Key. Nullable
	The related WMIEvidence

Database Column	Details
AccessEvidenceID	<i>Type:</i> integer. Key. Nullable
	The related AccessEvidence
RegistryEvidenceID	<i>Type:</i> integer. Nullable
	The related registry WMIEvidence
SoftwareLicensePoints	<i>Type:</i> integer. Key. Nullable
DefaultID	The related SoftwareLicensePointsDefault
SoftwareLicensePoints	<i>Type:</i> integer. Key. Nullable
RuleSetID	The related SoftwareLicensePointsRuleSet
SoftwareLicensePoints	<i>Type:</i> integer. Key. Nullable
RuleID	The related SoftwareLicensePointsRule
TypeOfID	<i>Type:</i> text (max 32 characters). Key
	The type of the last updated ARL record

SoftwareSKULookup Table

SoftwareSKULookup maps licenses imported from external source to SKU published by FNMS

Database Column	Details
SoftwareSKULookupID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this record.
SourceType	<i>Type</i> : text (max 32 characters). Key
LookupName	<i>Type</i> : text (max 128 characters). Key
SKU	<i>Type:</i> text (max 100 characters) Holds the SKU value.

SoftwareSku Table

SoftwareSku defines all software SKU (stock-keeping unit) numbers.

Table 470: Database columns for SoftwareSku table

Database Column	Details
SoftwareSkuID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a software SKU.
SKUFactoryUID	<i>Type:</i> text (max 30 characters). Key
	A FlexNet Manager Suite factory unique ID for this SKU.
SKU	<i>Type:</i> text (max 100 characters). Key
	Holds the SKU value.
SKUDefinition	<i>Type:</i> text
	Encrypted data that describes this SKU.
SoftwareLicense	<i>Type:</i> integer. Key
DefinitionID	SKU license definition. Used to create new licenses and link them to
	applications. Foreign key to the SoftwareLicenseDefinition table.
SoftwareSkuTypeID	<i>Type:</i> integer. Key
	For internal use only. A numerical representation of the type of SKU.
MaintenanceTypeID	<i>Type:</i> integer
	For internal use only. A numerical representation of the maintenance type (if any) of the SKU.
Version	<i>Type</i> : integer. Key
	The current version of the SKU definition.
PreviousVersion	<i>Type:</i> integer. Key. Nullable
	The version of the SKU definition prior to the current version.
CreationDate	<i>Type:</i> datetime
	The date that this SKU definition was created.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date that this SKU definition was last updated.
SKUPrefixLength	<i>Type:</i> integer. Key. Nullable
	The location of the % wildcard.

SoftwareTitle Table

The SoftwareTitle table contains the application titles managed by FlexNet Manager Suite.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 471: Database columns for SoftwareTitle table

Database Column	Details
SoftwareTitleID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a software record.
SoftwareTitleTypeID	<i>Type:</i> integer. Key
	The application type. Foreign key to the SoftwareTitleType table.
SoftwareTitleProductID	<i>Type:</i> integer. Key
	The application product, which also may specify a publisher. Foreign key to the SoftwareTitleProduct table.
SoftwareTitleVersionID	<i>Type:</i> integer. Key. Nullable
	The application version. Foreign key to the SoftwareTitleVersion table.
SoftwareTitleEditionID	<i>Type:</i> integer. Key. Nullable
	The application edition. Foreign key to the SoftwareTitleEdition table.
OperatorManageStateID	<i>Type:</i> integer. Key
	The management responsibility for this information. Foreign key to the OperatorManageState table.
FullName	<i>Type:</i> text (max 512 characters)
	By default, the full name of the application is the concatenation of the product, version, and edition fields. The operator may overwrite this with any preferred value.
SoftwareTitle	<i>Type:</i> integer. Nullable
ClassificationID	The classification of the title. Defaults to None. Foreign key to the
	SoftwareTitleClassification table.
IsMonitoringSessions	<i>Type:</i> boolean
	Set this field to True if sessions are being monitored.
UsageSessions	<i>Type:</i> integer
	An application is considered used if it is opened more than this many times within the monitoring period.
IsMonitoringActiveTime	<i>Type:</i> boolean
	Set this field to True if active time is being monitored.

Database Column	Details
UsageActiveTime	<i>Type:</i> integer An application is considered used if the application active time (time it is in the foreground) exceeds this value during the monitoring period.
UsagePeriod	<i>Type:</i> integer The period in months over which to consider usage.
Comments	<i>Type:</i> text. Nullable Stores any comments an operator wants to make about a particular application title.
SKU	<i>Type:</i> text (max 200 characters). Nullable Deprecated: now use LicensePartNo of the PurchaseOrderDetail table. Stock Keeping Unit (SKU) for the application.
CategoryID	<i>Type:</i> text (max 128 characters). Key. Nullable Any enterprise category associated with this application title. Foreign key to the GroupEx table.
IsLicensable	<i>Type:</i> boolean Set this field to True if this application needs a license. If False, the application doesn't need a license.
ReleaseDate	<i>Type:</i> datetime. Nullable The date the application was released.
IsSharableToLibrary	<i>Type:</i> boolean Set this field to True if the application is sharable to the FlexNet Manager Suite ARL library.
AutoManageLicensePriority	<i>Type:</i> boolean Set this field to True if the application should automatically manage the priority of attached licenses.
TitleRequiresStrict Matching	<i>Type:</i> boolean Set this field to True if the application should use stricter matching rules, requiring all evidence of all types to be present.
SupportedUntil	<i>Type</i> : datetime. Nullable The date the application will be supported
ExtendedSupportUntil	<i>Type</i> : datetime. Nullable The date the application will be supported, in extended case
StartOfLifeDate	<i>Type:</i> datetime. Nullable Start of life Date

Database Column	Details
EndOfSalesDate	<i>Type:</i> datetime. Nullable
	End of sales Date
EndOfLifeDate	<i>Type:</i> datetime. Nullable
	End of life Date
SoftwareTitleActionID	<i>Type:</i> integer
	A categorization for the application in the enterprise. Defaults to
	New.Foreign key to the SoftwareTitleAction table.
HasInstalls	<i>Type:</i> boolean
	If this field is True this application has at least one installation. If False, the
	application has no installations.
SoftwareLifeCycleID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the SoftwareLifeCycle table.
HasCustomEndOfSupportLife	<i>Type</i> : boolean. Nullable
	Set this field to indicate custom end of support life for this application.
CustomEndOfSupportLife	<i>Type:</i> datetime. Nullable
Date	Custom end of support life date.
IsShared	<i>Type</i> : boolean

SoftwareTitleAccessEvidence Table

SoftwareTitleAccessEvidence links software (application) titles to access evidence.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 472: Database columns for SoftwareTitleAccessEvidence table

Database Column	Details
SoftwareTitleID	<i>Type</i> : integer. Key The software title to which the access evidence is related. Foreign key to the SoftwareTitle table.
AccessEvidenceID	<i>Type:</i> integer. Key The access evidence related to the software title. Foreign key to the AccessEvidence table.

Database Column	Details
IsLocal	<i>Type:</i> boolean If this field is False, the link has come from the ARL. If it is True, then the link has been created by an operator.
IsShared	<i>Type:</i> boolean

SoftwareTitleAction Table

SoftwareTitleAction is a static table listing action outcomes for the application in the enterprise.

Table 473: Database	columns for SoftwareTitleAction table	е
---------------------	---------------------------------------	---

Database Column	Details
SoftwareTitleActionID	<i>Type</i> : integer. Key. Generated ID A unique identifier for each SoftwareTitleAction. Possible values and the corresponding default strings are:
	 1 = Unmanaged (recently created application, not yet categorized)
	• 2 = Authorized (application is authorized for use in the enterprise)
	• 3 = Unauthorized (application is not authorized for use)
	• 4 = Ignored (application will not be tracked by the enterprise)
	• 5 = Inactive (application is not in use in the enterprise).
	 6 = Deferred (application installed in enterprise but marked for later attention).
ActionResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an action outcome. Foreign key to the ComplianceResourceString table.
ActionDefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the action outcome resource string has no translation.

SoftwareTitleClassification Table

SoftwareTitleClassification is a static table listing the possible classifications for software titles.

Database Column	Details
SoftwareTitle ClassificationID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each SoftwareTitleClassification. Possible values and the corresponding default strings are: • 1 = Shareware
	 2 = Freeware 3 = Commercial
	 4 = Update
	 5 = Malware 6 = Beta
	 7 = XRated 8 = None
	• 9 = Component.
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing an
	application classification. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the classification resource string has no translation.

Table 474: Database columns for SoftwareTitleClassification table

SoftwareTitleEOSL Table

The SoftwareTitleEOSL table stores attributes of an application EOSL dates. These will only be populated if the FNMS for EOSL is present.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 475: Database column	ns for SoftwareTitleEOSL table
----------------------------	--------------------------------

Database Column	Details
SoftwareTitleID	<i>Type</i> : integer. Key The EOSL dates. Foreign key to the SoftwareTitle table.

Database Column	Details
StartOfLifeDate	<i>Type:</i> datetime. Nullable
	Start of life Date
ReleaseDate	<i>Type:</i> datetime. Nullable
	The date the application was released.
EndOfSalesDate	<i>Type:</i> datetime. Nullable
	End of sales Date
SupportedUntil	<i>Type:</i> datetime. Nullable
	The date the application will be supported
ExtendedSupportUntil	<i>Type:</i> datetime. Nullable
	The date the application will be supported, in extended case
EndOfLifeDate	<i>Type:</i> datetime. Nullable
	End of life Date
IsShared	<i>Type:</i> boolean

SoftwareTitleEdition Table

A list of application editions, which must be unique for a given product. Examples include "Ultimate", "Professional" and "32 bit".

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 476: Database of	columns for SoftwareTitleEdition tabl	е
------------------------	---------------------------------------	---

Database Column	Details
SoftwareTitleEditionID	<i>Type:</i> integer. Key. Generated ID The unique identifier for an edition.
SoftwareTitleProductID	<i>Type:</i> integer. Key The edition's product. Foreign key to the SoftwareTitleProduct table.
EditionName	<i>Type:</i> text (max 50 characters). Key The text for this application edition.
EditionWeight	<i>Type:</i> decimal Edition weight (for ordering, so we know which editions are upgrades/ downgrades of other editions).

Database Column	Details
IsLocal	<i>Type:</i> boolean If this field is False, the edition has come from the ARL. If it is True, then the edition has been created by an operator.
IsShared	<i>Type:</i> boolean

SoftwareTitleEx Table

The SoftwareTitleEx table contains additional information on the application titles managed by FlexNet Manager Suite.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 477: Database columns for SoftwareTitleEx table

Database Column	Details
SoftwareTitleID	<i>Type:</i> integer. Key A unique identifier for a software record.
OperatorManageStateID	<i>Type:</i> integer. Nullable The management responsibility for this information. Foreign key to the OperatorManageState table.
AutoManageLicensePriority	<i>Type:</i> boolean. Nullable Set this field to True if the application should automatically manage the priority of attached licenses.
IsMonitoringSessions	<i>Type:</i> boolean. Nullable Set this field to True if sessions are being monitored.
UsageSessions	<i>Type:</i> integer. Nullable An application is considered used if it is opened more than this many times within the monitoring period.
IsMonitoringActiveTime	<i>Type:</i> boolean. Nullable Set this field to True if active time is being monitored.
UsageActiveTime	<i>Type:</i> integer. Nullable An application is considered used if the application active time (time it is in the foreground) exceeds this value during the monitoring period.

Database Column	Details
UsagePeriod	<i>Type:</i> integer. Nullable
	The period in months over which to consider usage.
SoftwareTitleActionID	<i>Type</i> : integer. Key. Nullable
	A categorization for the application in the enterprise. Defaults to
	New.Foreign key to the SoftwareTitleAction table.
HasInstalls	<i>Type:</i> boolean. Nullable
	If this field is True this application has at least one installation. If False, the
	application has no installations.
HasCustomEndOfSupportLife	<i>Type:</i> boolean. Nullable
	Set this field to indicate custom end of support life for this application.
CustomEndOfSupportLife	<i>Type:</i> datetime. Nullable
Date	Custom end of support life date.

SoftwareTitleFileEvidence Table

SoftwareTitleFileEvidence links software (application) titles to file evidence.

Database Column	Details
SoftwareTitleID	<i>Type:</i> integer. Key
	The application title to which the file evidence is related. Foreign key to the SoftwareTitle table.
FileEvidenceID	<i>Type:</i> integer. Key
	The file evidence related to the software title. Foreign key to the
	FileEvidence table.
EvidenceExistenceRuleID	<i>Type:</i> integer
	The evidence existence rule related to the software title. Foreign key to the
	EvidenceExistenceRule table.

Database Column	Details
TrackUsage	<i>Type</i> : boolean If this field is True, the linked file evidence should be considered when calculating whether the application title is being used. If False, the file is not tracked for usage calculations.
IsLocal	<i>Type:</i> boolean If this field is False, the link has come from the ARL. If it is True, then the link has been created by an operator.
IsShared	<i>Type:</i> boolean

SoftwareTitleHierarchy Table

SoftwareTitleHierarchy records a hierarchy of applications. This table records relationships between Oracle database and component applications, between suites and their members, and between generic titles and more specific ones that will replace them.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ParentSoftwareTitleID	<i>Type:</i> integer. Key
	The parent application. Foreign key to the SoftwareTitle table.
ChildSoftwareTitleID	<i>Type</i> : integer. Key
	The child application. Foreign key to the SoftwareTitle table.
IsLicensable	<i>Type:</i> boolean. Nullable
	This field is used for Oracle option titles. Set this field to True to indicate
	that the child application needs to be separately licensed. If this field is
	False, the child application does not need to be separately licensed when
	the parent application is present and licensed.
IsMandatory	<i>Type</i> : boolean. Nullable
	This field is used on component applications of software suites. When the
	value is True, the child application must be installed for the suite to be
	recognized as installed. Otherwise, the application may or may not be installed for the suite to be recognized.

Table 479: Database columns for SoftwareTitleHierarchy table

Database Column	Details
RemovalOfChild	<i>Type:</i> boolean. Nullable This field is used to allow removal of titles when higher quality titles (with more specified evidence) are also found installed. When the value is True, the child application should be removed if evidence is found that both it and its parent title are installed. Otherwise, the child application is left in place.
IsLocal	<i>Type:</i> boolean If this field is False, the link has come from the ARL. If it is True, then the link has been created by an operator.
IsMandatoryDefault	<i>Type:</i> boolean. Nullable This field is used on component applications of software suites. This indicates the Default value of the Mandatory field and can be used to determine if this has been overridden by the user, in the case of an application with non-local membership to the suite (that is, the ARL specifies that the app belongs to the suite).
IsShared	<i>Type:</i> boolean

SoftwareTitleHierarchyEx Table

The SoftwareTitleHierarchyEx table contains additional information on the suite by FlexNet Manager Suite.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ParentSoftwareTitleID	<i>Type:</i> integer. Key The parent application. Foreign key to the SoftwareTitle table.
ChildSoftwareTitleID	<i>Type:</i> integer. Key The child application. Foreign key to the SoftwareTitle table.
IsMandatory	<i>Type:</i> boolean. Nullable This field is used on component applications of software suites. When the value is True, the child application must be installed for the suite to be recognized as installed. Otherwise, the application may or may not be installed for the suite to be recognized.

 Table 480:
 Database columns for SoftwareTitleHierarchyEx table

SoftwareTitleInstallerEvidence Table

SoftwareTitleInstallerEvidence links software (application) titles to installer evidence.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareTitleID	<i>Type</i> : integer. Key
	The software title to which the installer evidence is related. Foreign key to the SoftwareTitle table.
InstallerEvidenceID	<i>Type:</i> integer. Key
	The installer evidence related to the software title. Foreign key to the InstallerEvidence table.
IsLocal	<i>Type:</i> boolean
	If this field is False, the link has come from the ARL. If it is True, then the
	link has been created by an operator.
IsShared	<i>Type</i> : boolean

SoftwareTitleLicense Table

The SoftwareTitleLicense table links software (application) titles to licenses.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 482: Database columns for SoftwareTitleLicense table

Database Column	Details
SoftwareTitleID	<i>Type:</i> integer. Key The application. Foreign key to the SoftwareTitle table.
SoftwareLicenseID	<i>Type:</i> integer. Key The license covering this application. Foreign key to the SoftwareLicense table.

Database Column	Details
CompliancePriority	<i>Type:</i> integer. Nullable
	Installations of this application will consume the linked licenses in this table in order of priority. When NULL, the default priority stored in SoftwareLicenseType table will be used.
LicenseKeyValue	<i>Type:</i> text (max 400 characters). Nullable
	The license (installation) key value to be used when this license covers an installation of this application.
SoftwareTitleLicense	<i>Type:</i> integer
ReasonID	The reason that this application has been added to this license. Foreign key to the SoftwareTitleLicenseReason table.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.

SoftwareTitleLicenseProposal Table

The SoftwareTitleLicenseProposal table is used to store a summary of application changes to a particular software license. The changes have been inferred from changes to the license definition used to create the software license.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareTitleLicense ProposalID	<i>Type:</i> integer. Key. Generated ID Primary key for the SoftwareTitleLicenseProposal table.
SoftwareTitleID	<i>Type:</i> integer. Key Foreign key to the SoftwareTitle table.
SoftwareTitleProductID	<i>Type:</i> integer. Key. Nullable Foreign key to the SoftwareTitleProduct table.

 Table 483: Database columns for SoftwareTitleLicenseProposal table

Database Column	Details
OldPrimarySoftwareTitleID	<i>Type</i> : integer. Nullable The existing primary application of the license. This can be null if there is no primary application.
Supplementary	<i>Type:</i> boolean Whether this product will be added to this license as supplementary (counted for consumption) or not.
SoftwareLicenseID	<i>Type:</i> integer. Key Foreign key to the SoftwareLicense table.
SoftwareLicense DefinitionID	<i>Type:</i> integer Foreign key to the SoftwareLicenseDefinition table.
LicenseDefinitionVersion	<i>Type:</i> integer The version of the license definition that has been used for these proposed changes.
SoftwareTitleLicense ProposalActionID	<i>Type:</i> integer. Key The proposed action for the software title on the software license.
SoftwareLicense ProposalStatusID	<i>Type:</i> integer The state of this software license change proposal.
Conflicted	<i>Type:</i> boolean Whether this license title change proposal conflicts with another for the same license.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable The operator who created the record.
CreationDate	<i>Type:</i> datetime The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable The operator who updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable The date the record was updated.

SoftwareTitleLicenseProposalAction Table

SoftwareTitleLicenseProposalAction is a static table listing all of the actions that can be proposed for a software title on a software license.

Table 484: Database columns for SoftwareTitleLicenseProposalAction table

Database Column	Details
SoftwareTitleLicense ProposalActionID	<i>Type:</i> integer. Key. Generated ID
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing the SoftwareTitleLicenseProposalAction record. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 256 characters) The text to display if the state resource string has no translation.

SoftwareTitleLicenseReason Table

SoftwareTitleLicenseReason is a static table listing valid reasons why a software title was added to a license.

Table 485: Database columns for SoftwareTitleLicenseReason tab	le
--	----

Database Column	Details
SoftwareTitleLicense ReasonID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each SoftwareTitleLicenseReason. Possible values and the corresponding default strings are:
	• 1 = Manual
	• 2 = Current
	• 3 = Edition Downgrade
	• 4 = Version Downgrade
	• 5 = Version Upgrade.
ReasonResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing the reason a license was linked to a title. Foreign key to the ComplianceResourceString table.
ReasonDefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the reason resource string has no translation.

SoftwareTitleOracle Table

The SoftwareTitleOracle table stores attributes of an application installation that are relevant to Oracle applications only. These characteristics are important for Oracle licensing.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SoftwareTitleID	<i>Type:</i> integer. Key
	The Oracle application. Foreign key to the SoftwareTitle table.
MaximumSockets	<i>Type:</i> integer. Nullable
	The maximum number of sockets allowed on a computer where the application is installed.
NUPProcessorMultiplier	<i>Type:</i> integer. Nullable
	The multipler value to use when determining the minumum Named User Plus licenses for the application.
OverrideSoftwareTitle	<i>Type:</i> integer. Nullable
TypeID	If this is not null, then the application was initially created as non-Oracle, but the operator wants to license it as an Oracle title. Foreign key to the SoftwareTitleType table.
IsShared	<i>Type:</i> boolean

Table 486: Database columns for SoftwareTitleOracle table

SoftwareTitleProduct Table

The "product", unique for a given publisher, is the common name of a set of applications, independent of version or edition (for example, "Acrobat").

Database Column	Details
SoftwareTitleProductID	<i>Type</i> : integer. Key. Generated ID The unique identifier for a product.

Database Column	Details
SoftwareTitlePublisherID	<i>Type:</i> integer. Key. Nullable The publisher of this product. Foreign key to the SoftwareTitlePublisher table.
ProductName	<i>Type:</i> text (max 200 characters). Key The application's product name.
IsLocal	<i>Type:</i> boolean If this field is False, the product has come from the ARL. If it is True, then the product has been created by an operator.
IsShared	<i>Type:</i> boolean

SoftwareTitleProperty Table

SoftwareTitleProperty defines extra custom properties for all applications.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 488: Database columns for SoftwareTitleProperty table

Database Column	Details
SoftwareTitlePropertyID	<i>Type:</i> integer. Key. Generated ID The unique identifier for a software title property.
PropertyName	<i>Type</i> : text (max 256 characters). Key The name of the property.
CustomPropertyDisplayX MLID	<i>Type</i> : integer. Nullable Foreign key to a record in the CustomPropertyDisplayXML table, describing how to show the property on a property dialog.

SoftwareTitlePropertyValue Table

For each application, SoftwareTitlePropertyValue stores the values for the custom properties defined in SoftwareTitleProperty.

Database Column	Details
SoftwareTitleProperty	<i>Type:</i> integer. Key. Generated ID
ValueID	A unique identifier for a property value.
SoftwareTitleID	<i>Type:</i> integer. Key
	The title for which the property is being stored. Foreign key to the SoftwareTitle table.
SoftwareTitlePropertyID	<i>Type:</i> integer. Key
	The property whose value is being stored. Foreign key to the
	SoftwareTitleProperty table.
PropertyValue	<i>Type:</i> text (max 4000 characters)
	The property value.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.

Table 489: Database columns for SoftwareTitlePropertyValue table

SoftwareTitlePublisher Table

Publishers of software applications (for example, "Microsoft"). Note that only application records take the publisher name from this table. License and contract records take the publisher name from the Vendor table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 490: Database columns for SoftwareTitlePublisher table

Database Column	Details
SoftwareTitlePublisherID	<i>Type:</i> integer. Key. Generated ID The unique identifier for a publisher.

Database Column	Details
PublisherName	<i>Type:</i> text (max 200 characters). Key
	The publisher name.
IsLocal	<i>Type:</i> boolean
	If this field is False, the publisher has come from the ARL. If it is True, then
	the publisher has been created by an operator.
EOSLUrl	<i>Type</i> : text (max 2083 characters). Nullable
	The publisher's end of support life URL.
IsShared	<i>Type</i> : boolean

SoftwareTitleRegistryEvidence Table

Reserved for future use.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 491: Database columns for SoftwareTitleRegistryEvidence table

Database Column	Details
SoftwareTitleID	<i>Type:</i> integer. Key
	The software title to which the registry evidence is related. Foreign key to the SoftwareTitle table.
RegistryEvidenceID	<i>Type:</i> integer. Key
	The registry evidence related to the software title. Foreign key to the RegistryEvidence table.
IsShared	<i>Type:</i> boolean

SoftwareTitleSuite Table

For software that has been classed as a suite (because it has other applications linking to it as component applications), SoftwareTitleSuite identifies how many of its member applications must be present for the installation to count as a suite installation, using "application evidence" for suite recognition.

Table 492: Database columns for SoftwareTitleSuite table

Database Column	Details
SoftwareTitleID	<i>Type:</i> integer. Key The suite. Foreign key to the SoftwareTitle table.
MinNumberApps	<i>Type</i> : integer The minimum number of member applications of the software suite that must be installed.
MinNumberAppsDefault	<i>Type</i> : integer. Nullable The original, default value of MinNumberApps before it was changed.
IsShared	<i>Type</i> : boolean

SoftwareTitleSuiteEx Table

The SoftwareTitleSuiteEx table contains additional information on the suite by FlexNet Manager Suite.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 493: Database columns for SoftwareTitleSuiteEx table

Database Column	Details
SoftwareTitleID	<i>Type:</i> integer. Key A unique identifier for a software record.
MinNumberApps	<i>Type</i> : integer. Nullable The minimum number of member applications of the software suite that must be installed.

SoftwareTitleType Table

SoftwareTitleType is a static table listing possible types of software (application) titles. This is used particularly to identify types that need special processing. It is quite distinct from license types.

Table 494: Database columns for SoftwareTitleType table

Database Column	Details
SoftwareTitleTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a SoftwareTitleType. Possible values and the corresponding default strings are: • 1 = General
	• 2 = Oracle Database
	• 3 = Oracle Option
	• 4 = Oracle Application
	• 5 = Oracle EBS Server
	• 6 = Oracle EBS.
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing a document type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters)
	The text to display if the type resource string has no translation.
InstanceTypeID	<i>Type:</i> integer
	The type of instance that can be created for this application. Foreign key to the InstanceType table.

SoftwareTitleVersion Table

A list of application versions, which must be unique for a given product. Examples include "6.4", "XP", "Vista" and "2003".

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 495: Database columns for SoftwareTitleVersion table

Database Column	Details
SoftwareTitleVersionID	<i>Type</i> : integer. Key. Generated ID The unique identifier for a version.

Database Column	Details
SoftwareTitleProductID	<i>Type:</i> integer. Key
	The version's product. Foreign key to the SoftwareTitleProduct table.
VersionName	<i>Type:</i> text (max 50 characters). Key
	The text for this application version.
VersionWeight	<i>Type:</i> decimal
	Version weight (for ordering, so we know which versions are upgrades/ downgrades of other versions).
IsLocal	<i>Type:</i> boolean
	If this field is False, the version has come from the ARL. If it is True, then
	the version has been created by an operator.
IsShared	<i>Type</i> : boolean

SoftwareTitleVersionServicePack Table

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 496: Database columns for SoftwareTitleVersionServicePack table

Database Column	Details
SoftwareTitleVersionID	<i>Type</i> : integer. Key The application version. Foreign key to the SoftwareTitleVersion table.
ServicePackID	<i>Type</i> : integer. Key The service pack. Foreign key to the ServicePack table.

SoftwareTitleWMIEvidence Table

SoftwareTitleWMIEvidence links software titles to WMI evidence.

Database Column	Details
SoftwareTitleID	<i>Type:</i> integer. Key
	The software title to which the WMI evidence is related. Foreign key to the SoftwareTitle table.
WMIEvidenceID	<i>Type:</i> integer. Key
	The WMI evidence related to the software title. Foreign key to the WMIEvidence table.
IsLocal	<i>Type:</i> boolean
	If this field is False, the link has come from the ARL. If it is True, then the
	link has been created by an operator.
IsShared	<i>Type</i> : boolean

Table 497: Database columns for SoftwareTitleWMIEvidence table

SoftwareUserLicensePointsConsumedData Table

SoftwareUserLicensePointsConsumed records how many software license entitlements have been consumed for a given license by a given end-user.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceUserID	<i>Type:</i> integer. Key The end-user. Foreign key to the ComplianceUserSnapshot table.
SoftwareLicenseID	<i>Type</i> : integer. Key The license. Foreign key to the SoftwareLicenseSnapshot table.
LicensesConsumed	<i>Type</i> : integer The number of points (or entitlements) consumed for the license by the end- user.
CalculatedConsumption	<i>Type</i> : integer The calculated consumption value for this license assignment before exemptions or overrides are considered.

Table 498: Database columns for SoftwareUserLicensePointsConsumedData table

Database Column	Details
LicensesUsed	<i>Type:</i> integer How many of the points consumed are for installations that are actually being used.
LicenseMeasurementID	<i>Type</i> : integer. Key The license measurement ID. Foreign key to the LicenseMeasurement table.

SoftwareUserLicensePointsConsumedSuggested Table

SoftwareUserLicensePointsConsumedSuggested records how many software license entitlements would be consumed by an end-user for an optimized (suggested) license. Currently used to track optimized license usage suggested by FlexNet Manager for SAP.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceUserID	<i>Type</i> : integer. Key
	The end-user. Foreign key to the ComplianceUser table.
SuggestedSoftware	<i>Type:</i> integer. Key
LicenseID	The suggested or optimized license. Foreign key to the SoftwareLicense table.
LicensesConsumed	<i>Type</i> : integer
	The number of points (or entitlements) consumed for the license by the end- user.
LicensesUsed	<i>Type</i> : integer
	How many of the points consumed are for installations that are actually being used.
LicenseMeasurementID	<i>Type</i> : integer. Key
	The associated SAP license measurement snapshot. Foreign key to the LicenseMeasurement table.

Table 499: Database columns for SoftwareUserLicensePointsConsumedSuggested table

Database Column	Details
LicensesCalculated	<i>Type:</i> integer The number of points (or entitlements) calculated for the license by the end- user.

SoftwareUserLicensePointsConsumedSuggestedHistory Table

SoftwareUserLicensePointsConsumedSuggestedHistory table records the history of suggested (optimised) license consumption.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 500: Database columns for SoftwareUserLicensePointsConsumedSuggestedHistory table

Database Column	Details
ComplianceUserID	<i>Type:</i> integer. Key
	The end-user. Foreign key to the ComplianceUser table.
SuggestedSoftware	<i>Type:</i> integer. Key
LicenseID	The suggested or optimized license. Foreign key to the SoftwareLicense table.
LicensesConsumed	<i>Type:</i> integer
	The number of points (or entitlements) consumed for the license by the end- user.
LicensesUsed	<i>Type:</i> integer
	How many of the points consumed are for installations that are actually being used.
LicenseMeasurementID	<i>Type:</i> integer. Key
	The associated SAP license measurement snapshot. Foreign key to the LicenseMeasurement table.
LicensesCalculated	<i>Type:</i> integer
	The number of points (or entitlements) calculated for the license by the end- user.

SoftwareUserLicensePointsHistory Table

SoftwareUserLicensePointsHistory records history of license consumption by end-users.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceUserID	<i>Type</i> : integer. Key
	The end-user. Foreign key to the ComplianceUser table.
SoftwareLicenseID	<i>Type</i> : integer. Key
	The license. Foreign key to the SoftwareLicense table.
LicensesConsumed	<i>Type</i> : integer
	The number of points (or entitlements) consumed for the license by an end- user.
LicensesUsed	<i>Type</i> : integer
	How many of the points consumed are for installations that are actually being used.
LicenseMeasurementID	<i>Type:</i> integer. Key
	The associated SAP license measurement snapshot. Foreign key to the LicenseMeasurement table.
LicensesCalculated	<i>Type</i> : integer
	The number of points (or entitlements) calculated for the license by the end- user.

Table 501: Database columns for SoftwareUserLicensePointsHistory table

Tag Table

Reserved for future development.

Table 502: Database columns for Tag table

Database Column	Details
TagID	<i>Type:</i> integer. Key. Generated ID The unique ID for this tag.
Name	<i>Type:</i> text (max 128 characters). Key The name of this tag.
Description	<i>Type:</i> text Description of this tag and its purpose.

TargetOperatingSystemType Table

TargetOperatingSystemType; is a static table listing all types of OSes that can be targeted by licensing.

Database Column	Details
TargetOperatingSystem TypeID	 Type: integer. Key. Generated ID A unique identifier for each TargetOperatingSystemType. Possible values and the corresponding default strings are: 1 = All 2 = Windows Server operating systems 3 = Windows desktop operating systems 4 = Non Windows Server operating systems
ResourceName	<i>Type:</i> text (max 256 characters). Key The unique name of the localizable resource string representing an Operating System family. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the type resource string has no translation.

TemporalInstalledSoftwareSCD Table

TemporalInstalledSoftwareSCD is a table listing history of all the installations of an application (as defined in the SoftwareTitle table).

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 504: Database columns for TemporalInstalledSoftwareSCD table

Database Column	Details
ComplianceComputerID	<i>Type</i> : integer. Key
	The computer on which the software is installed. Foreign key to the ComplianceComputer table.
SoftwareTitleID	<i>Type:</i> integer. Key
	The software that is installed. Foreign key to the SoftwareTitle table.
ValidFrom	<i>Type:</i> datetime. Key
	Date from which these properties became valid.
ValidTo	<i>Type:</i> datetime. Key
	Date these properties were valid to, or 9999-12-31T23:59:59.997 if they are currently valid.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable
	LicenseID of license to which this installation has been assigned.

VDI Table

VDI is the list of VDI devices

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 505: Database columns for VDI table

Database Column	Details
VDIID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a VDI device.
ComputerName	<i>Type:</i> text (max 256 characters). Key The computer name of the VDI.
ComplianceDomainID	<i>Type:</i> integer. Key. Nullable The domain the VDI is a member of. Foreign key to the ComplianceDomain table.

Database Column	Details
VDIGroupID	<i>Type</i> : integer. Key The VDI group the VDI device belongs to. Foreign key to the VDIGroup table.
VDITemplateID	<i>Type:</i> integer. Key The master VM template of the VDI. Foreign key to the VDITemplate table.
RetiredDate	<i>Type:</i> datetime. Key. Nullable The date the VDI device was deleted.
ApplicationDeliveryOnly	<i>Type:</i> boolean. Key Determines whether the VDI device is used only to server applications.

VDIEndPointAccess Table

VDIEndPointAccess is the list of endpoint devices that have accessed VDI devices

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 506: Database columns for VDIEndPointAccess table

Database Column	Details
VDIEndPointAccessID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for an endpoint device accessing a VDI.
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	A unique identifier for the endpoint. Foreign key to the
	ComplianceComputer table.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable
	A unique identifier for the endpoint user. Foreign key to the
	ComplianceUser table.
VDIID	<i>Type:</i> integer. Key
	A unique identifier for the VDI. Foreign key to the VDI table.
LogonTime	<i>Type:</i> datetime. Nullable
	The date the user logged on to the VDI.

VDIGroup Table

VDIGroup stores the list of available VDI groups in a VDI environment.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 507: Database columns for VDIGroup table

Database Column	Details
VDIGroupID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a VDI Group record.
GroupName	<i>Type:</i> text (max 128 characters). Key The VDI Group name
VDISiteID	<i>Type:</i> integer. Key The VDI site ID
VDIGroupUUID	<i>Type:</i> unique identifier. Key. Nullable The UUID of the VDI group

VDISite Table

VDISite stores the list of available VDI sites.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 508: Database columns for VDISite table

Database Column	Details
VDISiteID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a VDI site record.
SiteName	<i>Type:</i> text (max 256 characters). Key The VDI Group name
AccessModeID	<i>Type:</i> integer. Key The access mode of the VDI site. Foreign key to the AccessMode table.

VDITemplate Table

VDITemplate stores the list of available VDI groups in a VDI environment.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 509: Database columns for VDITemplate table

Database Column	Details
VDITemplateID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a VDI Group record.
TemplateName	<i>Type:</i> text (max 256 characters). Key The VDI template name.
VDISiteID	<i>Type:</i> integer. Key. Nullable The VDI template's site ID
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable The VDI template's ComplianceComputerID

VDIUser Table

VDIUser is the list of users that have access to VDI groups

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 510: Database columns for VDIUser table

Database Column	Details
VDIUserID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a VDI User.
VDIGroupID	<i>Type</i> : integer. Key A unique identifier for the VDI Group. Foreign key to the VDIGroup table.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable A unique identifier for the user with access to a VDI Group. Foreign key to the ComplianceUser table.

WMIEvidence Table

WMIEvidence lists WMI evidence that is used to identify that a particular item of software (defined in the SoftwareTitle table) has been installed on a computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
WMIEvidenceID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a WMI evidence record.
ClassName	<i>Type:</i> text (max 50 characters). Key
PropertyName	The WMI class name of the WMI evidence. <i>Type:</i> text (max 50 characters). Key
	The WMI property name of the WMI evidence.
PropertyValue	<i>Type:</i> text (max 256 characters). Key The value of the WMI evidence property.
Ignored	<i>Type:</i> boolean
	Set this field to True if this WMI evidence is ignored for application recognition.
IsShared	<i>Type:</i> boolean

Table 511: Database columns for WMIEvidence table

WMIEvidenceMatchCount Table

WMIEvidenceMatchCount tracks the number of times that each WMI evidence (rule) has been detected as installed and recorded in the data source. A separate count is kept for each WMI evidence rule, and for each data source.

Table 512: Database columns for WMIEvidenceMatchCount table

Database Column	Details
WMIEvidenceMatchCountID	<i>Type</i> : integer. Key. Generated ID A synthetic unique identifier is required, since ComplianceConnectionID, being nullable, cannot be included in the primary key.
WMIEvidenceID	<i>Type</i> : integer. Key WMI evidence rule being matched. Foreign key to the WMIEvidence table.
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable Data source where the match is occurring. Foreign key to the ComplianceConnection table.
MatchedCount	<i>Type:</i> integer The number of installed WMI evidence records in this data source matching this WMI evidence rule.
InstallCount	<i>Type:</i> integer The number of physical application installations recognized in this data source using this WMI evidence rule.

Compliance.Logic.Structure Tables

The complete set of database tables documented here includes:

- ComplianceDomain table (see ComplianceDomain Table)
- GroupEx table (see GroupEx Table)
- GroupExPathCultureType table (see GroupExPathCultureType Table)
- GroupType table (see GroupType Table)
- MemberEx table (see MemberEx Table)
- Region table (see Region Table)
- RoleRight table (see RoleRight Table)

ComplianceDomain Table

Stores a list of domain names imported FlexNet Manager Suite.

Table 513: Database columns for ComplianceDomain table

Database Column	Details
ComplianceDomainID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a domain.
QualifiedName	<i>Type:</i> text (max 100 characters) The fully qualified name of the domain.
FlatName	<i>Type:</i> text (max 32 characters) The flat name of the domain.

GroupEx Table

The GroupEx table stores information about enterprise groups and roles.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 514: Database columns for GroupEx table

Database Column	Details
GroupID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for a group.
GroupTypeID	<i>Type</i> : integer. Key
	Identifies the group type. Foreign key to the GroupType table.
BusinessView	<i>Type</i> : boolean. Key
	Set this to True if the group is a business view (that is, is a group heading
	like Roles or Categories.
Path	<i>Type</i> : text (max 500 characters)
	Complete path of the group.
NextChild	<i>Type</i> : integer
	The ID number for the next child to be created under this group. Internal use
	only: do not edit.
GroupExID	<i>Type:</i> text (max 128 characters). Key
	Unique string identifier for this extension record.

Database Column	Details
BusinessPhoneNumber	<i>Type:</i> text (max 30 characters). Nullable
	The business phone number of the group.
FaxPhoneNumber	<i>Type:</i> text (max 30 characters). Nullable
	The fax number of the group.
Address_Street	<i>Type</i> : text (max 200 characters). Nullable
	The street address of the group.
Address_City	<i>Type</i> : text (max 200 characters). Nullable
	The city of the group.
Address_State	<i>Type</i> : text (max 200 characters). Nullable
	The state of the group.
Address_ZIP	<i>Type</i> : text (max 20 characters). Nullable
	The ZIP or postal code of the group.
Address_Country	<i>Type</i> : text (max 100 characters). Nullable
	The country of the group.
Email	<i>Type</i> : text (max 200 characters). Nullable
	The email address of the group.
Comments	<i>Type</i> : text. Nullable
	Comments about the group.
IsStockLocation	<i>Type</i> : boolean
	For locations only. If this field is set to True, the location is considered to be a stock or storage location.
ContactID	<i>Type:</i> integer. Nullable
	A contact person for this group. This field is no longer in use in FlexNet Manager Suite
ManagerID	<i>Type:</i> integer. Nullable
	A manager for this group. This field is no longer in use in FlexNet Manager Suite
GroupCN	<i>Type:</i> text (max 256 characters). Nullable
	The common name for the group.
NameResourceName	<i>Type:</i> text (max 256 characters). Nullable
	The unique name of the localizable resource string representing an enterprise group name (GroupCN). Foreign key to the ComplianceResourceString table.

Database Column	Details
DescriptionResourceName	<i>Type</i> : text (max 256 characters). Nullable The unique name of the localizable resource string representing an enterprise group description (Comments). Foreign key to the ComplianceResourceString table.
ParentGroupExID	<i>Type:</i> text (max 128 characters). Key. Nullable Unique string identifier for the parent record.
TreeLevel	<i>Type:</i> integer. Nullable The level of this group in the hierarchy.
TreePath	<i>Type</i> : text (max 4000 characters). Key. Nullable A generated path that can be used to sort groups in tree order.
SpecifiedRegion	<i>Type</i> : boolean RegionID specified explicitly by the user through the web UI.
RegionID	<i>Type:</i> integer. Key. Nullable RegionID for each location inherit from itself or parent.
IsShared	<i>Type</i> : boolean

GroupExPathCultureType Table

The GroupExPathCultureType table stores complete enterprise group paths per culture type for each enterprise group.

Database Column	Details
GroupID	<i>Type:</i> integer. Key The ID of the group the transalted path belongs to.
CultureType	<i>Type:</i> text (max 12 characters). Key A unique identifier for a culture type.
Path	<i>Type:</i> text (max 500 characters) The translated group path for the specific culture type.
TreePath	<i>Type:</i> text (max 4000 characters) A generated path that can be used to sort groups in tree order.

Table 515: Database columns for GroupExPathCultureType table

GroupType Table

The collection of types of enterprise groups, such as locations, departments, and cost centers.

Table 516: Database columns for GroupType tab

Database Column	Details
GroupTypeID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for each GroupType. Possible values and the
	corresponding default strings are:
	• 1 = Location
	• 2 = Departments
	• 3 = Cost Center
	• 4 = Category
	• 5 = Role.
Description	<i>Type:</i> text (max 255 characters). Key
	A description of the type of enterprise group.
ResourceName	<i>Type:</i> text (max 256 characters). Key. Nullable
	The unique name of the localizable resource string representing a group
	type. Foreign key to the ComplianceResourceString table.

MemberEx Table

The MemberEx table stores the membership lists for every enterprise group or role.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 517: Database columns for MemberEx table

Database Column	Details
GroupID	<i>Type</i> : integer. Key The GroupEx to which the member belongs.

Database Column	Details
TargetTypeID	<i>Type:</i> integer. Key
	The TargetType. Possible values are:
	• 3 = Enterprise Group
	• 9 = Asset
	• 10 = Contract
	• 11 = Purchase Order
	• 12 = Software License
	• 13 = Software Title
	• 14 = Computer
	• 15 = User
	• 16 = Operator
	• 17 = SAP system landscapes
	• 18 = SAP systems
	• 19 = SAP rule sets
TargetID	<i>Type</i> : integer. Key
	The Asset, Contract, etc. identifier, depending on TargetType.

Region Table

The collection of region for IBM PVU license

Table 518: Database columns for Region table

Database Column	Details
RegionID	 <i>Type:</i> integer. Key. Generated ID A unique identifier for each Region. Possible values and the corresponding default strings are: 1 = North America and South America 2 = Europe and Africa 3 = Asia and Australia

Database Column	Details
ResourceName	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing an end-user status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the status resource string has no translation.

RoleRight Table

Each action by FlexNet Manager Suite requires the role to have one or more RoleRights to perform an ActionClass over a given Resource.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
GroupID	<i>Type:</i> integer. Key
	The role to whom the right is granted or denied.
ResourceID	<i>Type:</i> integer. Key
	The Resource to which the RoleRight applies.
ActionClassID	<i>Type:</i> integer. Key
	The action class which applies (read or modify).
Denied	<i>Type:</i> boolean
	When TRUE (1), indicates that the specified right is denied.
ScopeGroupID	<i>Type:</i> integer. Key. Nullable
	The enterprise group to which the right for this role applies, if applicable.

Table 519: Database columns for RoleRight table

Compliance.Logic.Users Tables

The complete set of database tables documented here includes:

- ComplianceUser table (see ComplianceUser Table)
- ComplianceUserConnection table (see ComplianceUserConnection Table)
- ComplianceUserInventorySourceType table (see ComplianceUserInventorySourceType Table)

- ComplianceUserStatus table (see ComplianceUserStatus Table)
- EmploymentStatus table (see EmploymentStatus Table)
- UserSuffix table (see UserSuffix Table)
- UserTitle table (see UserTitle Table)

ComplianceUser Table

ComplianceUser stores information about end-users in the enterprise, including contact details, login details and inventory source details (if applicable). End-users in ComplianceUser will not be able to log in to FlexNet Manager Suite unless they have a corresponding record in the ComplianceOperator table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceUserID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the end-user.
UserName	<i>Type:</i> text (max 512 characters). Nullable
	The end-user's full name. When creating a new end-user manually, defaults
	to a concatenation of title, first name, middle name, last name and suffix.
SAMAccountName	<i>Type:</i> text (max 64 characters). Key. Nullable
	The login name (SAM account name) of the end-user.
ComplianceDomainID	<i>Type:</i> integer. Key. Nullable
	Domain that the end-user belongs to. Foreign key to the
	ComplianceDomain table.
LocationID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any enterprise location associated with this end-user. Foreign key to the
	GroupEx table.
BusinessUnitID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any corporate unit in the enterprise associated with this end-user. Foreign
	key to the GroupEx table.
CostCenterID	Type: text (max 128 characters). Key. Nullable
	Any cost center in the enterprise associated with this end-user. Foreign key
	to the GroupEx table.

Table 520: Database columns for ComplianceUser table

Database Column	Details
CategoryID	<i>Type:</i> text (max 128 characters). Key. Nullable
	No longer in use, but retained for legacy systems. Any enterprise category associated with this end-user. Foreign key to the GroupEx table.
EmployeeNumber	Type: text (max 128 characters). Key. Nullable
	The employee number of the end-user (as defined in an organization's own HR system).
UserTitleID	<i>Type:</i> integer. Nullable
	The title of the end-user. Foreign key to the UserTitle table.
FirstName	<i>Type:</i> text (max 128 characters). Nullable
	The first name of the end-user.
MiddleName	Type: text (max 128 characters). Nullable
	The middle name(s) of the end-user.
LastName	<i>Type:</i> text (max 128 characters). Nullable
	The last name (surname) of the end-user.
UserSuffixID	<i>Type:</i> integer. Nullable
	The suffix to the name of the end-user. Foreign key to the UserSuffix table.
JobTitle	<i>Type:</i> text (max 128 characters). Nullable
	The job title of the end-user.
BusinessPhoneNumber	<i>Type:</i> text (max 30 characters). Nullable
	The work phone number of the end-user.
MobilePhoneNumber	<i>Type:</i> text (max 30 characters). Nullable
	The mobile phone number of the end-user.
FaxPhoneNumber	<i>Type:</i> text (max 30 characters). Nullable
	The fax number of the end-user.
Address_Street	<i>Type:</i> text (max 200 characters). Nullable
	The street address of the end-user.
Address_City	<i>Type:</i> text (max 200 characters). Nullable
	The city or suburb name of the end-user.
Address_State	<i>Type:</i> text (max 200 characters). Nullable
	The state or province of the end-user.
Address_ZIP	<i>Type:</i> text (max 20 characters). Nullable
	The ZIP or postal code of the end-user.

Database Column	Details
Address_Country	<i>Type:</i> text (max 100 characters). Nullable
	The country of the end-user.
Email	<i>Type:</i> text (max 200 characters). Key. Nullable
	The email address of the end-user.
AlternateEmail	<i>Type:</i> text (max 200 characters). Nullable
	The alternate email address of the end-user.
Messenger	<i>Type:</i> text (max 200 characters). Nullable
	The instant messenger address of the end-user.
ManagerID	<i>Type:</i> integer. Key. Nullable
	The manager of the end-user. Foreign key to another end-user in the ComplianceUser table.
CurrencyID	<i>Type:</i> integer. Nullable
	No longer in use - default currency is now stored in the OperatorTenantSetting table.
UserStatusID	<i>Type:</i> integer
	The end-user's status. Foreign key to the ComplianceUserStatus table.
EmploymentStatusID	<i>Type:</i> integer. Nullable
	The end-user's employment status. Foreign key to the EmploymentStatus table.
IsIncluded	<i>Type:</i> boolean
	If False, the end-user's login name is in the list of excluded accounts, and
	this end-user will not consume licenses or be recorded as the last-logged-on or calculated end-user of a computer. This end-user will also not appear in many lists of end-users.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the record.
CreationDate	<i>Type:</i> datetime
	The date the record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who last updated the record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the record was last updated.

Database Column	Details
ComplianceUser	<i>Type</i> : integer
InventorySourceTypeID	Whether this end-user has ever been reported in inventory, or has been manually created and maintained. Foreign key to the ComplianceUserInventorySourceType table.
InventoryAgent	<i>Type:</i> text (max 64 characters). Nullable
	If this end-user is reported in inventory, the name of the person or tool that performed the last inventory.
GeneratedFromEmail	<i>Type</i> : boolean
	If True, the ComplianceUser record was generated using the email address provided by a source connection.

ComplianceUserConnection Table

ComplianceUserConnection stores a link between end-users in ComplianceUser which have been reported in inventory, and external IDs which can be used to identify them in their inventory sources. End-users reported in multiple inventory sources will appear multiple times in this table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 521: Database columns for ComplianceUserConnection table

Database Column	Details
ComplianceUserID	<i>Type:</i> integer. Key A unique identifier for the end-user. Foreign key to the ComplianceUser table.
ComplianceConnectionID	<i>Type:</i> integer. Key The inventory source where the end-user was reported. Foreign key to the ComplianceConnection table.
ExternalID	<i>Type</i> : big integer. Key A (hopefully unique) identifier for the end-user in the external inventory source.

ComplianceUserInventorySourceType Table

ComplianceUserInventorySourceType is a static table used to define possible end-user inventory source values (that is, whether the end-user was created manually or reported by the compliance importer).

Database Column	Details
ComplianceUser	<i>Type</i> : integer. Key. Generated ID
InventorySourceTypeID	A unique identifier for each ComplianceUserInventorySourceType. Possible values and the corresponding default strings are:
	 1 = Automatic (end-user was recently updated during an inventory import)
	 2 = Manual (end-user was created manually by an operator, using FlexNet Manager Suite, and has never been updated by the compliance importer).
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an inventory source. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the inventory source resource string has no translation.

Table 522: Database columns for ComplianceUserInventorySourceType table

ComplianceUserStatus Table

ComplianceUserStatus is a static table listing status values for end-user.

Database Column	Details
ComplianceUserStatusID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each ComplianceUserStatus. Possible values and the corresponding default strings are:
	• 1 = Active
	• 2 = Inactive
	• 3 = Retired
	• 4 = On leave
	• 5 = Pending (perhaps for an employee just starting with the company).
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an end-user status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the status resource string has no translation.

Database Column	Details
IsUserActive	<i>Type:</i> boolean. Key If this field is set to False, any end-user with this status will not consume licenses or be recorded as the last-logged-on or calculated end-user of a computer. This end-user will also not appear in many lists of end-users.

EmploymentStatus Table

EmploymentStatus is a static table listing possible employment statuses values for end-users.

Table 524:	Database	columns f	or Emplo	ymentStatus	table
	Dutubuse	columns i		ymenescucus	tubic

Database Column	Details
EmploymentStatusID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each EmploymentStatus. Possible values and the corresponding default strings are:
	• 1 = Employee
	• 2 = Consultant
	• 3 = Temporary
	• 4 = Part time
	• 5 = Casual.
ResourceName	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an
	employment status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters)
	The text to display if the employment status resource string has no translation.

UserSuffix Table

UserSuffix is a static table listing possible name suffixes for end-users.

Database Column	Details
UserSuffixID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for each UserSuffix. Possible values and the
	corresponding default strings are:
	• 1 = Jr.
	• 2 = Sr.
	• 3 = I
	• $4 = II$
	• 5 = III.
ResourceString	<i>Type</i> : text (max 256 characters). Key
	The unique name of the localizable resource string representing an end-user
	name suffix. Foreign key to the ComplianceResourceString table.
DefaultString	<i>Type</i> : text (max 100 characters)
	The text to display if the suffix resource string has no translation.

Table 525: Database columns for UserSuffix table

UserTitle Table

UserTitle is a static table listing the possible titles of end-users.

Table 526: Database columns for UserTitle table

UserTitleID Type: integer. Key. Generated ID A unique identifier for each UserTitle. Possible values and the	
 value identifier for each open freder to solve values and the corresponding default strings are: 1 = Mr. 2 = Miss 3 = Mrs. 4 = Ms. 5 = Dr. 6 = Prof. 	

Database Column	Details
ResourceString	<i>Type</i> : text (max 256 characters). Key The unique name of the localizable resource string representing an end-user title. Foreign key to the ComplianceResourceString table.
DefaultString	<i>Type:</i> text (max 100 characters) The text to display if the title resource string has no translation.

Compliance.SAP Tables

The complete set of database tables documented here includes:

- SAPActivityCheckMultipleLogons table (see SAPActivityCheckMultipleLogons Table)
- SAPActivityCheckSummary table (see SAPActivityCheckSummary Table)
- SAPActivityCheckWorkTime table (see SAPActivityCheckWorkTime Table)
- SAPCompositeRole table (see SAPCompositeRole Table)

SAPActivityCheckMultipleLogons Table

This table stores SAP activity check data related to work time.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SAPActivityCheck	<i>Type:</i> integer. Key. Generated ID
MultipleLogonsID	A unique identifier for the SAP activity check multiple login data.
SAPActivityCheck	<i>Type:</i> text (max 32 characters). Key
MultipleLogonsUID	The SAP unique identifier for the SAP activity check multiple login data.
SAPUserID	<i>Type:</i> integer. Key
	Foreign key to the SAP user.
SAPSystemLandscapeID	<i>Type:</i> integer. Key
	Foreign key to the system landscape that the SAP activity check multiple login data belongs to.
MeasurementDate	<i>Type:</i> datetime
	The date that the SAP activity check multiple login data was measured.
MeasurementPeriodStart	<i>Type:</i> datetime
Date	The start date that the SAP activity check multiple login data was measured from.
MeasurementPeriodEndDate	<i>Type:</i> datetime
	The end date that the SAP activity check multiple login data was measured to.
NumberOfMultipleLogons	<i>Type:</i> integer
	The number of logons the user account has made from different systems at the same time during the measurement period.
MultipleLogonsPeakDate	<i>Type:</i> datetime
	The date where the number of logons the user account has made from different systems at the same time during the measurement period reached its peak value.

Table 527: Database columns for SAPActivityCheckMultipleLogons table

SAPActivityCheckSummary Table

This table stores SAP activity check summary data.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 528: Database columns for SAPActivityCheckSummary table

Database Column	Details
SAPActivityCheckSummaryID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP activity check summary.
SAPUserID	<i>Type:</i> integer. Key
	Foreign key to the SAP user.
SAPSystemLandscapeID	<i>Type:</i> integer. Key
	Foreign key to the system landscape that the SAP activity check work time data belongs to.
HasExceededBreakDuration	<i>Type:</i> boolean
	Indicates whether or not the user has exceeded the minimum required break duration.
HasMultipleLogons	<i>Type:</i> boolean
	Indicates whether or not the user has multiple logons.
IsHidden	<i>Type:</i> boolean
	Is this record marked as hidden in the UI.

SAPActivityCheckWorkTime Table

This table stores SAP activity check data related to work time.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 529: Database columns for SAPActivityCheckWorkTime table

Database Column	Details
SAPActivityCheckWork	<i>Type:</i> integer. Key. Generated ID
TimeID	A unique identifier for the SAP activity check work time data.
SAPActivityCheckWork	<i>Type:</i> text (max 32 characters). Key
TimeUID	The SAP unique identifier for the SAP activity check work time data.
SAPUserID	<i>Type:</i> integer. Key Foreign key to the SAP user.

Database Column	Details
SAPSystemLandscapeID	<i>Type</i> : integer. Key Foreign key to the system landscape that the SAP activity check work time data belongs to.
MeasurementDate	<i>Type:</i> datetime The date that the SAP activity check work time data was measured.
MeasurementPeriodStart Date	<i>Type</i> : datetime The start date that the SAP activity check work time data was measured from.
MeasurementPeriodEndDate	<i>Type:</i> datetime The end date that the SAP activity check work time data was measured to.
BreakDurationSetting	<i>Type:</i> integer The minimum number of seconds that a user must not be running any transactions in a 24 hour period.
TableName	<i>Type:</i> text (max 256 characters). Key The name of the SAP table that was accessed during the minimum required break period.
BreakDurationResult	<i>Type:</i> integer The number of days that the user has not meet the minimum break duration setting during the measurement period.

SAPCompositeRole Table

This table stores SAP composite roles.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 530: Database columns for SAPCompositeRole table

Database Column	Details
SAPCompositeRoleID	<i>Type:</i> integer. Key. Generated ID A unique identifier for SAP composite role.
CompositeRoleID	<i>Type:</i> integer. Key Foreign key to SAP role which contain one or more single roles.

Database Column	Details
SingleRoleID	<i>Type:</i> integer. Key
	Foreign key to SAP role that is a member if the composite role.

SAPConnectivityDirectionType Table

This table stores SAP connectivity direction type.

Database Column	Details
SAPConnectivity	<i>Type:</i> integer. Key. Generated ID
DirectionTypeID	A unique identifier for the SAP connectivity direction type.
TypeName	<i>Type:</i> text (max 64 characters). Key
	A unique lookup for each SAPConnectivityDirectionType. Possible
	values and the corresponding default strings are:
	• Out
	• In
	• InOut
ResourceName	<i>Type:</i> text (max 256 characters). Nullable
	A localizable resource string representing an SAP connectivity type. Foreign
	key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the SAP connectivity type resource string has no translation.

SAPConnectivityType Table

This table stores SAP connectivity type.

Table 532: Database columns for SAPConnectivityType table

Database Column	Details
SAPConnectivityTypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP connectivity type.

Database Column	Details
TypeName	<i>Type:</i> text (max 64 characters). Key
	A unique lookup for each SAPConnectivityType. Possible values and the corresponding default strings are:
	Interactive
	• Batch
ResourceName	<i>Type</i> : text (max 256 characters). Nullable
	A localizable resource string representing an SAP connectivity type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the SAP connectivity type resource string has no translation.

SAPConsolidatedUser Table

This table stores the data specific to an SAP consolidated user.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 533: Database columns for SAPConsolidatedUser ta	ble
--	-----

Database Column	Details
SAPConsolidatedUserID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP consolidated user.
UserUID	<i>Type:</i> text (max 128 characters). Key
	A globally unique identifier for the SAP license recommendation.
SAPRecommendationSetID	<i>Type:</i> integer. Key
	Foreign key to the SAP recommendation set that the duplicate user recommendation belongs to.
SAPUserID	<i>Type:</i> integer. Key
	Foreign key to the SAP user that the duplicate user recommendation
	belongs to.
UserName	<i>Type</i> : text
	The user name of the user that the duplicate user recommendation belongs
	to.

Database Column	Details
DuplicateGroupNum	<i>Type:</i> integer
	The unique identifier showing which users are duplicates of one another.
LicenseType	<i>Type:</i> text (max 2 characters). Nullable
	The license code originally assigned to the user.
IsConsolidatedBySAP	<i>Type:</i> boolean
	Whether or not this user is consolidated by SAP.
OptimalLicenseType	<i>Type</i> : text (max 2 characters). Nullable
	The license code recommended the user be assigned ignoring license ratios and rebalancing.

SAPConsolidatedUserDuplicate Table

This table stores the data specific to an SAP consolidated user duplicate.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SAPConsolidatedUser DuplicateID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP consolidated duplicate user.
SAPRecommendationSetID	<i>Type:</i> integer. Key Foreign key to the SAP recommendation set that the duplicate user belongs to.
SAPConsolidatedUserID	<i>Type:</i> integer. Key Foreign key to the SAP consolidated user linked to an SAP user.
SAPUserID	<i>Type:</i> integer. Key Foreign key to the SAP user that the duplicate user belongs to.
IsConsolidatedBySAP	<i>Type:</i> boolean. Key Whether or not this user is consolidated by SAP.

Table 534: Database columns for SAPConsolidatedUserDuplicate table

SAPConsumption Table

This table stores the data related to the definition of SAP consumption data.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 535: Database columns for SAPConsumption table

Database Column	Details
SAPConsumptionID	<i>Type:</i> integer. Key. Generated ID
	The unique identifier for the SAP consumption.
SAPUserID	<i>Type:</i> integer. Key
	Foreign key to the SAP user that the consumption belongs to.
TimePeriodStartDate	<i>Type:</i> datetime. Key
	The date and time of the consumption
AccountObject	<i>Type:</i> text (max 40 characters). Key
	The account object
AccountObjectDetails	<i>Type:</i> text (max 40 characters). Key
	The account object details
EntryType	<i>Type:</i> text (max 1 characters). Key
	The consumption entry type
TaskType	<i>Type:</i> text (max 2 characters). Key
	The consumption task type
CPUTime	<i>Type:</i> decimal. Key. Nullable
	CPU usage in seconds
MemoryUsed	<i>Type:</i> big integer. Nullable
	Memory used
PrivateMemoryUsed	<i>Type</i> : big integer. Nullable
	Private memory used
AccessCount	<i>Type</i> : integer. Nullable
	Number of times the object has been used/accessed.

SAPContentEngine Table

This table stores an engine from downloadable content.

Table 536: Database columns for SAPContentEngine table

Database Column	Details
SAPContentEngineID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for the SAP content engine table.
EngineContentUID	<i>Type</i> : text (max 128 characters). Key
	A global unique identifier for the engine.
EngineName	<i>Type:</i> text (max 128 characters)
	Name of engine.
EngineDescription	<i>Type:</i> text. Nullable
	Description of engine.
Comments	<i>Type:</i> text. Nullable
	Comments from factory.
ApplicationID	<i>Type:</i> integer. Nullable
	SAP internal application ID
ConsumptionUnit	<i>Type:</i> text. Nullable
	Unit description to describe the consumption amount.
CreationDate	<i>Type:</i> datetime
	The data and time the engine was created.
UpdatedDate	<i>Type:</i> datetime
	The date and time the engine was last updated.

SAPContentEngineRule Table

This table stores an engine rule from downloadable content.

Table 537: Database	columns for SAPConte	entEngineRule table
---------------------	----------------------	---------------------

Database Column	Details
SAPContentEngineRuleID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP content engine rule table.
EngineContentUID	<i>Type:</i> text (max 128 characters) A global unique identifier for the engine.
RuleContentUID	<i>Type:</i> text (max 128 characters). Key A global unique identifier for the engine rule.

Database Column	Details
RuleName	<i>Type:</i> text (max 128 characters)
	Name of engine rule.
RuleDefinition	<i>Type:</i> text. Nullable
	Rule definition for calculating consumption of an engine.
IsDefault	<i>Type:</i> boolean
	Is this formula the default for created packages.
CreationDate	<i>Type:</i> datetime
	The data and time the engine rule was created.
UpdatedDate	<i>Type:</i> datetime
	The date and time the engine rule was last updated.

SAPDuplicateUserRecommendation Table

This table stores the data specific to an SAP duplicate user recommendation.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 538: Database columns for SAPDuplicateUserRecommendation table

Database Column	Details
SAPDuplicateUser RecommendationID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP duplicate user recommendation.
RecommendationUID	Type: text (max 128 characters). Key
	A globally unique identifier for the SAP license recommendation.
SAPRecommendationSetID	<i>Type:</i> integer. Key Foreign key to the SAP recommendation set that the duplicate user recommendation belongs to.
DuplicateGroupNum	<i>Type</i> : integer
	The unique identifier showing which users are duplicates of one another.
SAPUserID	<i>Type:</i> integer. Key. Nullable
	The unique identifier of the user that the duplicate user recommendation belongs to.

Database Column	Details
UserName	<i>Type:</i> text The user name of the user that the duplicate user recommendation belongs to.
SystemID	<i>Type:</i> text The ID of the system that the duplicate user recommendation belongs to.
ClientID	<i>Type:</i> text The ID of the client that the duplicate user recommendation belongs to.
IsConsolidatedBySAP	<i>Type:</i> boolean Whether or not this duplicate is consolidated by SAP.
SAPRuleID	<i>Type:</i> integer. Nullable The unique identifier of the rule used to produce the duplicate user recommendation.
RuleSetName	<i>Type:</i> text. Nullable The name of the rule set used to produce the duplicate user recommendation.
RuleName	<i>Type:</i> text. Nullable The name of the rule used to produce the duplicate user recommendation.
RuleSequenceNumber	<i>Type:</i> integer. Nullable The sequence number of the rule used to produce the duplicate user recommendation.
RuleMessage	<i>Type:</i> text. Nullable The message produced given by the rule used to produce the duplicate user recommendation.
SAPRecommendation ProcessedStatusID	<i>Type:</i> integer Foreign key to the SAP recommendation processed status of the duplicate user recommendation.
RuleMessageResourceName	<i>Type</i> : text (max 256 characters). Nullable The resource name of the message produced given by the rule used to produce the duplicate user recommendation.
RuleMessageParameters	<i>Type:</i> text (max 256 characters). Nullable The parameters used by the message produced given by the rule used to produce the duplicate user recommendation.

SAPEngine Table

This table stores the application engines used in SAP.

Table 539: Database columns for SAPEngine table

Database Column	Details
SAPEngineID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP engine table.
ApplicationID	<i>Type:</i> integer. Key The unique identifier given to the application engine by SAP.
SAPEnginePeriodTypeID	<i>Type:</i> integer A unique identifier for the SAP engine period type.

SAPEngineConsumptionSummary Table

This table stores the total consumption of SAP package consumption recommendation.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 540: Database columns for SAPEngineConsumptionSummary table

Database Column	Details
SAPEngineConsumption	<i>Type:</i> integer. Key. Generated ID
SummaryID	A unique identifier for the SAP engine consumption.
LandscapeUID	<i>Type:</i> text (max 128 characters)
	A global unique identifier for the system landscape the summary belongs to.
RecommendationSetUID	<i>Type:</i> text (max 128 characters)
	A global unique identifier for the SAP recommendation set the summary
	belongs to.
SAPRecommendationSet	<i>Type:</i> integer
StatusID	The status of the recommendation set.
SAPSystemLandscape	<i>Type:</i> integer. Key. Nullable
EngineID	A unique identifier for the SAP system landscape engine table.
EngineUID	Type: text (max 128 characters)
	A global unique identifier for the SAP engine in a system landscape.

Database Column	Details
EngineName	<i>Type:</i> text (max 128 characters)
	Name of engine.
Consumed	<i>Type:</i> decimal. Nullable
	The number of consumed units for the package (null = indeterminate)
ConsumptionUnit	<i>Type:</i> text. Nullable
	Unit description to describe the consumption amount.
ReasonMessage	<i>Type:</i> text. Nullable
	And optional message detailing the reason for the consumed result.
EntitlementsPurchased	<i>Type:</i> integer
	Total number of purchased license entitlements.
EngineUnitPrice	<i>Type:</i> currency. Nullable
	The unit price of a license entitlement.
EngineUnitPriceRateID	<i>Type:</i> integer. Nullable
	The unit price rate of a license entitlement.
CalculationDate	<i>Type:</i> datetime
	The date of the license postion calculation.
SystemMeasurementDate	<i>Type:</i> datetime
	The date the system measurement calculation was performed.

SAPEngineMetric Table

This table stores the application engine metrics used in SAP.

Table 541: Database columns for SAPEngineMetric table

Database Column	Details
SAPEngineMetricID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP engine metric table.
MetricID	<i>Type</i> : integer. Key The unique identifier given to the application engine metric by SAP.

SAPEngineMetricName Table

This table stores the name of applications engine metrics in different languages.

Table 542: Database columns for SAPEngineMetricName table

Database Column	Details
SAPEngineMetricNameID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP engine metric name table.
SAPEngineMetricID	<i>Type:</i> integer. Key The unique identifier of an SAP engine metric.
EngineMetricName	<i>Type:</i> text (max 128 characters). Key. Nullable The name of the application engine metric.
Language	<i>Type:</i> text (max 4 characters). Key A unique code to identify the language.

SAPEngineName Table

This table stores the name of applications engines in different languages.

Table 543: Database columns for SAPEngineName table

Database Column	Details
SAPEngineNameID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP engine name table.
SAPEngineID	<i>Type:</i> integer. Key The unique identifier of an SAP engine.
EngineName	<i>Type:</i> text (max 128 characters). Key. Nullable The name of the application engine.
Language	<i>Type:</i> text (max 4 characters). Key A unique code to identify the language.

SAPEnginePeriodType Table

This table stores the types of SAP applications engine measurement periods.

Table 544: Database columns for SAPEnginePeriodType table

Database Column	Details
SAPEnginePeriodTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP engine period type table.

Database Column	Details
PeriodTypeCode	<i>Type:</i> text (max 1 characters). Key
	A unique lookup for each SAPEnginePeriodType. Possible values and the corresponding default strings are:
	• Y = Last year
	• C = Last calendar year
	• T = Year to date
	• M = This month
	• Q = This quarter
	• 6 = Last six months
	• U = Undefined
ResourceName	<i>Type:</i> text (max 256 characters)
	A localizable resource string representing an SAP system type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the system type resource string has no translation.

SAPEngineSystemConsumption Table

This table stores the per-system consumption of SAP package consumption recommendation.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 545: Database columns for SAPEngineSystemConsumption table

Database Column	Details
SAPEngineSystem	<i>Type:</i> integer. Key. Generated ID
ConsumptionID	A unique identifier for the SAP engine consumption.
SAPRecommendationSetID	<i>Type:</i> integer. Key Foreign key to the SAP recommendation set that the license recommendation belongs to.
SAPSystemLandscape	<i>Type:</i> integer. Key. Nullable
EngineID	A unique identifier for the SAP system landscape engine table.

Database Column	Details
EngineUID	<i>Type:</i> text (max 128 characters)
	A global unique identifier for the SAP engine in a system landscape.
EngineName	Type: text (max 128 characters)
	Name of engine.
SAPSystemID	<i>Type:</i> integer. Key. Nullable
	The unique identifier of the system that the consumed count belongs to.
SystemID	<i>Type:</i> text
	The ID of the system that the license recommendation belongs to.
ClientID	<i>Type:</i> text
	The ID of the client that the license recommendation belongs to.
Consumed	<i>Type:</i> decimal. Nullable
	The number of consumed units for the package (null = indeterminate)
ReasonMessage	<i>Type:</i> text. Nullable
	And optional message detailing the reason for the consumed result.
SystemMeasurementDate	<i>Type:</i> datetime. Nullable
	The date the system measurement calculation was performed.

SAPImportedInventoryFileDigest Table

This table stores digests of imported SAP inventory files.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 546: Database columns for SAPImportedInventoryFileDigest table

Database Column	Details
SAPImportedInventory FileDigestID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP impoted inventory file digest.
LandscapeUID	<i>Type:</i> text (max 128 characters). Key A global unique identifier for the system landscape.
SystemID	<i>Type:</i> text (max 64 characters). Key The System ID that is used to identify the SAP system.

Database Column	Details
ClientID	<i>Type:</i> text (max 32 characters). Key The Client ID that is to be used when connecting to the SAP system.
SystemNumber	<i>Type:</i> text (max 32 characters). Key. Nullable The SAP system number. This value will be used by the RFC connection.
MD5Hash	<i>Type:</i> text (max 64 characters). Key MD5 hash of imported SAP inventory file content.
CreationDate	<i>Type:</i> datetime The data and time the digest record was created.

SAPLicenseRatio Table

This table stores SAP license ratios used for recommending optimizations for SAP.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 547: Database columns for SAPLicenseRatio table

Database Column	Details
SAPLicenseRatioID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP license ratio.
LeftLicenseType	<i>Type:</i> text (max 2 characters)
	The type of license assigned to the left side of the license ratio.
LeftValue	<i>Type:</i> integer
	The value belonging to the left side of the license ratio.
RightLicenseType	Type: text (max 2 characters)
	The type of license assigned to the right side of the license ratio.
RightValue	<i>Type:</i> integer
	The value belonging to the right side of the license ratio.
SAPSystemLandscapeID	<i>Type:</i> integer. Key
	Foreign key to the system landscape that the license ratio belongs to.
IsActive	<i>Type:</i> boolean
	Whether or not this license ratio is used to automatically optimize SAP license assignments.

Database Column	Details
CreationUser	<i>Type:</i> text (max 256 characters) The user who created the license ratio.
CreationDate	<i>Type:</i> datetime The data and time the license ratio was created.
UpdatedUser	<i>Type:</i> text (max 256 characters) The last user who update the license ratio.
UpdatedDate	<i>Type:</i> datetime The date and time the license ratio was last updated.

SAPLicenseRecommendation Table

This table stores the data specific to an SAP license recommendation.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 548: Database columns for SAPLicenseRecommendation table

Database Column	Details
SAPLicense	<i>Type:</i> integer. Key. Generated ID
RecommendationID	A unique identifier for the SAP license recommendation.
RecommendationUID	<i>Type:</i> text (max 128 characters). Key
	A globally unique identifier for the SAP license recommendation.
SAPRecommendationSetID	<i>Type:</i> integer. Key
	Foreign key to the SAP recommendation set that the license
	recommendation belongs to.
SAPUserID	<i>Type:</i> integer. Key. Nullable
	The unique identifier of the user that the license recommendation belongs
	to.
UserName	<i>Type:</i> text
	The user name of the user that the license recommendation belongs to.
SystemID	<i>Type:</i> text
	The ID of the system that the license recommendation belongs to.

Database Column	Details
ClientID	<i>Type:</i> text
	The ID of the client that the license recommendation belongs to.
OriginalLicenseType	<i>Type:</i> text (max 2 characters). Nullable
	The license code originally assigned to the user.
RecommendedLicenseType	<i>Type:</i> text (max 2 characters). Nullable
	The license code recommended the user be assigned.
SAPRuleID	<i>Type</i> : integer. Nullable
	The unique identifier of the rule used to produce the license recommendation.
RuleSetName	<i>Type:</i> text. Nullable
	The name of the rule set used to produce the license recommendation.
RuleName	<i>Type:</i> text. Nullable
	The name of the rule used to produce the license recommendation.
RuleSequenceNumber	<i>Type:</i> integer. Nullable
	The sequence number of the rule used to produce the license recommendation.
RuleMessage	<i>Type:</i> text. Nullable
	The message produced given by the rule used to produce the license recommendation.
SAPRecommendation	<i>Type:</i> integer
ProcessedStatusID	Foreign key to the SAP recommendation processed status of the license recommendation.
OptimalLicenseType	<i>Type:</i> text (max 2 characters). Nullable
	The license code recommended the user be assigned ignoring license ratios and rebalancing.
SAPRecommendation	<i>Type:</i> integer. Nullable
AdjustmentReasonID	The unique identifier of the reason why the license recommendation differs from optimal.
RuleMessageResourceName	<i>Type:</i> text (max 256 characters). Nullable
	The resource name of the message produced given by the rule used to produce the license recommendation.
RuleMessageParameters	<i>Type:</i> text (max 256 characters). Nullable
	The parameters used by the message produced given by the rule used to produce the license recommendation.

SAPLicenseType Table

This table stores the SAP license type on SAP systems.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 549: Database columns for SAPLicenseType table

Database Column	Details
SAPLicenseTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP license type.
SAPSystemID	<i>Type:</i> integer. Key
	Foreign key to the system that the SAP license type belongs to.
Identifier	<i>Type:</i> text (max 2 characters). Key
	SAP license type identifier
SAPSpecialVersionID	<i>Type:</i> integer. Key. Nullable
	SAP special version ID
Active	<i>Type:</i> boolean
	Indicates whether the SAP license type is active or not active.
SpecialVersionAssignment	<i>Type:</i> boolean. Nullable
	Indicates whether the SAP license type is affected by special version.
SSCR_Allow	<i>Type:</i> boolean. Nullable
IsDeleted	<i>Type:</i> boolean
	Indicated whether the SAP license type has been deleted or not.

SAPLicenseTypeHierarchy Table

This table stores SAP license type hierarchy.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 550: Database columns for SAPLicenseTypeHierarchy table

Database Column	Details
SAPLicenseTypeHierarchyID	<i>Type:</i> integer. Key. Generated ID The unique identifer for the SAP license type hierarchy.
SAPLicenseTypeID	<i>Type:</i> integer. Key Parent license type. Foreign key to the SAP license type.
ChildSAPLicenseTypeID	<i>Type:</i> integer. Key Child license type. Foreign key to SAP license type.

SAPLicenseTypeName Table

This table stores SAP license types in various languages.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 551: Database columns for SAPLicenseTypeName table

Database Column	Details
SAPLicenseTypeNameID	<i>Type:</i> integer. Key. Generated ID Unique identifier for SAP license type name.
SAPLicenseTypeID	<i>Type:</i> integer. Key Foreign key to the SAP license type.
Language	<i>Type:</i> text (max 4 characters) The two letter language code.
ShortName	<i>Type:</i> text (max 128 characters). Nullable SAP license type short name.
LongName	<i>Type:</i> text (max 256 characters). Nullable SAP license type long name

SAPModule Table

This table stores the modules used in SAP.

Table 552: Database columns for SAPModule table

Database Column	Details
SAPModuleID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP module table.
ModuleName	<i>Type:</i> text (max 64 characters). Key The name of the module.
SubModuleName	<i>Type:</i> text (max 64 characters). Key. Nullable The name of the sub module.
ObjectName	<i>Type:</i> text (max 40 characters). Key. Nullable The name of the object linked to the SAP system module.

SAPMultipleLogon Table

This table stores logon metrics for SAP users.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 553: Database columns for SAPMultipleLogon table

Database Column	Details
SAPMultipleLogonID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the user's logon metrics
SAPUserID	<i>Type:</i> integer. Key Foreign key to the SAP user.
Year	<i>Type:</i> text (max 4 characters) The year of the logon metrics
NumberOfMultipleLogon	<i>Type:</i> integer. Nullable Number of multiple concurrent logon
MaxMultipleLogon	<i>Type:</i> integer. Nullable Maximum number of concurrent logon

SAPObject Table

This table stores the SAP object

Table 554: Database columns for SAPObject table

Database Column	Details
SAPObjectID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP object.
ObjectName	<i>Type:</i> text (max 40 characters). Key Name of the object
SAPObjectTypeID	<i>Type:</i> integer. Key Foreign key to the SAP object type that identifies the object type.

SAPObjectType Table

This tables stores SAP object types

Database Column	Details
SAPObjectTypeID	<i>Type:</i> integer. Key. Generated ID
	• 1 = Transaction
	• 2 = Report
	• 3 = Job
	• 4 = NonSAP
TypeName	<i>Type</i> : text (max 64 characters). Key
	A unique name for the SAP object type.
ResourceName	<i>Type:</i> text (max 256 characters). Nullable
	A localizable resource string representing an SAP object type. Foreign key to
	the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the object type resource string has no translation.

SAPRFCConnection Table

This table stores RFC connections made to the SAP system.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 556: Database columns for SAPRFCConnection table

Database Column	Details
SAPRFCConnectionID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP RFC consumption.
SAPUserID	<i>Type:</i> integer. Key
	SAP user performing the RFC connection. Foreign key to the SAPUser table
TimePeriodStartDate	<i>Type:</i> datetime. Key
	The date and time of the RFC connection
RemoteSystem	<i>Type:</i> text (max 128 characters). Key
	Remote system name connecting to the SAP system.
ProgramName	<i>Type:</i> text (max 40 characters). Key
	Program Name associated to the function name.
FunctionName	<i>Type:</i> text (max 40 characters). Key
	The function executed by the RFC calls
TaskType	Type: text (max 2 characters). Key. Nullable
	Task type.
RFCDestination	<i>Type:</i> text (max 128 characters). Key
	The RFC destination string value.
TotalExecutionCount	<i>Type:</i> integer
	The number of times the function is executed.
TotalExecutionTime	<i>Type:</i> decimal
	Total execution time.
TotalCallTime	<i>Type:</i> decimal
	Total call time.
TotalDataSent	<i>Type:</i> big integer
	Total data sent by the RFC calls.
TotalDataReceived	<i>Type:</i> big integer
	Total data received b the RFC calls.

SAPRFCConnectionSummary Table

This table stores the remote RFC consumption summary. It only includes Non-SAP remote system

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 557: Database columns for S	SAPRFCConnectionSummary table
-----------------------------------	-------------------------------

Database Column	Details
SAPRFCConnectionSummaryID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the remote SAP RFC connection summary.
RemoteSystem	<i>Type:</i> text (max 128 characters). Key
	Remote system making the RFC calls.
NumberOfSAPSystems	<i>Type:</i> integer
	Number of SAP systems the Remote System is connecting to.
NumberOfDialogUsers	<i>Type:</i> integer
	Number of Dialog SAP users making the RFC call to the SAP system.
NumberOfNonDialogUsers	<i>Type:</i> integer
	Number of Service SAP users making the RFC call to the SAP system.
NumberOfExecutedPrograms	<i>Type:</i> integer
	The number of executed programs
NumberOfExecutedFunctions	<i>Type:</i> integer
	The number of executed functions
TotalExecutionCount	<i>Type:</i> integer
	The total excution count of all functions.
TotalExecutionTime	<i>Type:</i> decimal
	Total execution time.
TotalCallTime	<i>Type:</i> decimal
	Total call time.
TotalDataSent	<i>Type:</i> big integer
	Total data sent by the RFC calls.
TotalDataReceived	<i>Type:</i> big integer
	Total data received b the RFC calls.

Database Column

Details

IsHidden

Type: boolean

Is this record marked as hidden in the UI.

SAPRecommendationAdjustmentReason Table

This table stores SAP Recommendation adjustment reasons.

Database Column	Details
SAPRecommendation AdjustmentReasonID	 Type: integer. Key. Generated ID A unique identifier for each SAPRecommendationAdjustmentReason. Possible values and the corresponding default strings are: 1 = License ratio enforced 2 = Excess purchase(s) of covering license type applied.
ResourceName	<i>Type:</i> text (max 256 characters). Key A localizable resource string representing an SAP recommendation adjustment reason. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the adjustment reason resource string has no translation.

SAPRecommendationProcessedStatus Table

This table stores SAP Recommendation Processed status.

Table 559: Database columns for SAPRecommendationProcessedSta

Database Column	Details
SAPRecommendation ProcessedStatusID	 Type: integer. Key. Generated ID A unique identifier for each SAPRecommendationProcessedStatus. Possible values and the corresponding default strings are: 1 = Pending 2 = Accepted 3 = Rejected

Database Column	Details
ResourceName	<i>Type</i> : text (max 256 characters). Key A localizable resource string representing an SAP recommendation processed status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the status resource string has no translation.

SAPRecommendationSet Table

This table stores data specific to the definition of a recommendation set.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 560:
 Database columns for SAPRecommendationSet table

Database Column	Details
SAPRecommendationSetID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for the SAP recommendation set.
RecommendationSetUID	<i>Type:</i> text (max 128 characters). Key
	A global unique identifier for the SAP recommendation set.
RecommendationSetName	<i>Type:</i> text (max 128 characters)
	Name of recommendation set.
RecommendationSet	<i>Type:</i> text. Nullable
Description	Description of recommendation set.
LandscapeUID	<i>Type:</i> text (max 128 characters)
	A global unique identifier for the system landscape the recommendation set belongs to.
SAPRecommendationSet	<i>Type:</i> integer. Key
StatusID	The status of the recommendation set.
CalculationDate	<i>Type:</i> datetime. Nullable
	The date of the license postion calculation.
CreationUser	<i>Type:</i> text (max 256 characters)
	The user who created the recommendation set.

Database Column	Details
CreationDate	<i>Type</i> : datetime
	The data and time the recommendation set was created.
UpdatedUser	<i>Type:</i> text (max 256 characters)
	The last user who update the recommendation set.
UpdatedDate	<i>Type:</i> datetime
	The date and time the recommendation set was last updated.
ReviewedUser	<i>Type:</i> text (max 256 characters). Nullable
	The user who reviewed the recommendation set.
ReviewedDate	<i>Type:</i> datetime. Nullable
	The date and time the recommendation set was reviewed.
ReleasedUser	<i>Type:</i> text (max 256 characters). Nullable
	The user who released the recommendation set.
ReleasedDate	<i>Type:</i> datetime. Nullable
	The date and time the recommendation set was released.
Uploaded	<i>Type:</i> boolean
	Indicates whether the recommendation set was oploaded by FNM-SAP
UploadedDate	<i>Type:</i> datetime. Nullable
	The date the recommendation set was oploaded by FNM-SAP

SAPRecommendationSetStatus Table

This table stores SAP Recommendation Set status.

Database Column	Details
SAPRecommendationSet StatusID	<i>Type:</i> integer. Key. Generated ID A unique identifier for each SAPRecommendationSetStatus. Possible values
	and the corresponding default strings are:1 = In Review
	• 2 = Archived
	• 3 = Released
	• 4 = New License Position
	• 5 = Rejected
	• 6 = Simulation.
	• 7 = Creating
ResourceName	<i>Type</i> : text (max 256 characters). Key
	A localizable resource string representing an SAP recommendation set status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the status resource string has no translation.

Table 561: Database columns for SAPRecommendationSetStatus table

SAPRecommendationSetSummary Table

This table stores a history of SAP license positions.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 562: Database columns for SAPRecommendationSetSummary table

Database Column	Details
SAPRecommendationSet SummaryID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP license recommendation summary.
LandscapeUID	<i>Type:</i> text (max 128 characters). Key A global unique identifier for the system landscape the summary belongs to.

Database Column	Details
RecommendationSetUID	<i>Type:</i> text (max 128 characters). Key
	A global unique identifier for the SAP recommendation set the summary belongs to.
SAPRecommendationSet	<i>Type:</i> integer
StatusID	The status of the recommendation set.
LicenseType	<i>Type:</i> text (max 2 characters). Key. Nullable
	The license code to which the position applies.
EntitlementsPurchased	<i>Type:</i> integer
	Total number of purchased license entitlements.
EntitlementsOriginal	<i>Type:</i> integer
	Total number of consumed license entitlements.
EntitlementsRecommended	<i>Type:</i> integer
	Total number of recommended license entitlements.
LicenseTypeUnitPrice	<i>Type</i> : currency. Nullable
	The unit price of a license entitlement.
LicenseTypeUnitPrice	<i>Type:</i> integer. Nullable
RateID	The unit price rate of a license entitlement.
CalculationDate	<i>Type:</i> datetime
	The date of the license postion calculation.
EntitlementsOptimal	<i>Type:</i> integer
	Total number of recommended license entitlements without license ratio constraints.

SAPRole Table

This table stores SAP roles

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 563: Database columns for SAPRole table

Database Column	Details
SAPRoleID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP role.
SAPSystemID	<i>Type:</i> integer. Key
	Foreign key to the system that the role belongs to.
RoleName	<i>Type:</i> text (max 30 characters) The name of the role.
NumberOfTransactionCodes	<i>Type:</i> integer. Nullable Total number of transaction codes allowed to be executed by this role.
LicenseType	<i>Type:</i> text (max 2 characters). Nullable License type associated to this role

SAPRoleConsumption Table

This table stores SAP roles and its link to SAP consumption.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 564: Database columns for SAPRoleConsumption table

Database Column	Details
SAPRoleConsumptionID	<i>Type:</i> big integer. Key. Generated ID
	A unique identifier for for SAP role consumption.
SAPUserID	<i>Type:</i> integer. Key
	Foreign key to the SAP user that the role consumption belongs to.
CompositeRoleID	<i>Type:</i> integer. Key. Nullable
	Foreign key to SAP role.
SingleRoleID	<i>Type:</i> integer. Key
	Foreign key to SAP role.
SingleRoleTransaction	<i>Type:</i> integer. Key
CodeID	Foreign key to SAP transaction code.

Database Column

Details

SAPConsumptionID

Type: integer. Key

Foreign key to SAP consumption.

SAPRoleTransactionCode Table

This table stores list of roles and its transaction codes.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 565: Database columns for SAPRoleTransactionCode table

Database Column	Details
SAPRoleTransactionCodeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the roles and its transaction codes.
SAPRoleID	<i>Type:</i> integer. Key Foreign to the SAP Roles where transaction codes belong to.
TCodeLow	<i>Type:</i> text (max 80 characters). Key. Nullable Lower range of the transaction code.
TCodeHigh	<i>Type:</i> text (max 40 characters). Nullable Upper range of the transaction code.

SAPRule Table

This table stores SAP rules used for recommending optimizations for SAP.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 566: Database columns for SAPRule table

Database Column	Details
SAPRuleID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP rule.

Database Column	Details
RuleName	<i>Type:</i> text (max 128 characters)
	Name of the rule.
SAPRuleTypeID	<i>Type:</i> integer. Key
	Foreign key to the rule type of the SAP rule.
SAPRuleSetID	<i>Type:</i> integer. Key
	Foreign key to the rule set that the SAP rule belongs to.
RuleDefinition	<i>Type:</i> text
	The rule definition XML used to build the rule statement used by the SAP rules engine.
SequenceNumber	<i>Type:</i> integer
	The sequence number used to designate the order of the rules within the rule set.
SAPRuleCategoryID	<i>Type:</i> integer. Key
	Foreign key to the rule category of the SAP rule.
IsActive	<i>Type:</i> boolean
	Whether or not this rule is active for execution.
UseRuleSetMapping	<i>Type:</i> boolean
	Whether or not to use mapping from the SAP rule set
CreationUser	<i>Type:</i> text (max 256 characters)
	The user who created the system landscape.
CreationDate	<i>Type:</i> datetime
	The data and time the system landscape was created.
UpdatedUser	<i>Type:</i> text (max 256 characters)
	The last user who update the system landscape.
UpdatedDate	<i>Type:</i> datetime
	The date and time the system landscape was last updated.

SAPRuleAlgorithm Table

This table stores the availble SAP rule algorithms used by SAP rules.

Table 567: Database columns for SAPRuleAlgorithm table

Database Column	Details
SAPRuleAlgorithmID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP rule algorithm.
AlgorithmName	<i>Type:</i> text (max 100 characters). Key
	A unique name for the SAP category.
SAPRuleCategoryID	<i>Type:</i> integer. Key
	Foreign key to the rule category of the SAP rule algorithm.
TitleResourceName	Type: text (max 256 characters). Nullable
	A localizable resource string representing an SAP rule algorithm. Foreign key
	to the ComplianceResourceString table.
TitleDefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the rule type resource string has no translation.
AlgorithmType	<i>Type:</i> text
	Type associated with this algorithm
AlgorithmData	<i>Type:</i> text. Nullable
	Data associated with this algorithm, such as a custom SQL query to run.

SAPRuleCategory Table

This table stores the different rule categories used in recommending optimizations for SAP.

Table 568: Database columns for SAPRuleCategory table

Database Column	Details
SAPRuleCategoryID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP rule category.
CategoryName	<i>Type:</i> text (max 100 characters). Key A unique name for the SAP category.

SAPRuleMapping Table

This table stores mapping between SAP rule to either System Landscapes, System Groups or SAP systems.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 569: Database columns for SAPRuleMapping table

Database Column	Details
SAPRuleMappingID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP rule set mapping.
SAPRuleID	<i>Type:</i> integer. Key
	Foreign key to SAP Rule ID
SAPSystemLandscapeID	<i>Type:</i> integer. Key. Nullable
	Foreign key to System Landscape ID
SAPSystemGroupID	<i>Type:</i> integer. Key. Nullable
	Foreign key to System Group ID.
SAPSystemID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the SAP system.
CreationUser	<i>Type:</i> text (max 256 characters)
	The user who created the system landscape.
CreationDate	<i>Type:</i> datetime
	The data and time the system landscape was created.
UpdatedUser	<i>Type:</i> text (max 256 characters)
	The last user who update the system landscape.
UpdatedDate	<i>Type:</i> datetime
	The date and time the system landscape was last updated.

SAPRuleSet Table

This table stores SAP rule sets used for recommending optimizations for SAP.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 570: Database columns for SAPRuleSet table

Database Column	Details
SAPRuleSetID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP rule set.
RuleSetName	<i>Type:</i> text (max 128 characters)
	Name of rule set.
RuleSetDescription	<i>Type:</i> text. Nullable
	Description of rule set.
SAPSystemLandscapeID	<i>Type:</i> integer. Key
	Foreign key to the system landscape that the SAP rule set belongs to.
IsActive	<i>Type:</i> boolean
	Whether or not this rule set is used to automatically optimize SAP license
	assignments.
SequenceNumber	<i>Type:</i> integer
	The sequence number used to designate the order of the rule sets within the landscape.
SAPRuleCategoryID	<i>Type:</i> integer. Key
	Foreign key to the rule category of the SAP rule set.
NumberOfConsumptionMonth	<i>Type:</i> integer
ConsumptionMonthEndDate	<i>Type:</i> datetime. Nullable
	End date of consumption period used for recommending optiomizations. If null,
CreationUser	<i>Type:</i> text (max 256 characters)
	The user who created the system landscape.
CreationDate	<i>Type:</i> datetime
	The data and time the system landscape was created.
UpdatedUser	<i>Type:</i> text (max 256 characters)
	The last user who update the system landscape.
UpdatedDate	<i>Type:</i> datetime
	The date and time the system landscape was last updated.
SecurityTypeID	<i>Type:</i> integer
	Security type for this object. Foreign key to the SecurityType table.

SAPRuleSetMapping Table

This table stores mapping between SAP rule sets to either System Landscapes, System Groups or SAP systems.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 571: Database columns for SAPRuleSetMapping table

Database Column	Details
SAPRuleSetMappingID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP rule set mapping.
SAPRuleSetID	<i>Type:</i> integer. Key
	Foreign key to SAP Rule Set ID
SAPSystemLandscapeID	<i>Type:</i> integer. Key. Nullable
	Foreign key to System Landscape ID
SAPSystemGroupID	<i>Type:</i> integer. Key. Nullable
	Foreign key to System Group ID.
SAPSystemID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the SAP system.
CreationUser	<i>Type:</i> text (max 256 characters)
	The user who created the system landscape.
CreationDate	<i>Type:</i> datetime
	The data and time the system landscape was created.
UpdatedUser	<i>Type:</i> text (max 256 characters)
	The last user who update the system landscape.
UpdatedDate	<i>Type:</i> datetime
	The date and time the system landscape was last updated.

SAPRuleType Table

This table stores the available SAP rule types used for recommending optimizations for SAP.

Table 572: Database columns for SAPRuleType table

Database Column	Details
SAPRuleTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP rule type.
TypeName	<i>Type:</i> text (max 100 characters). Key
	A unique name for the SAP rule type.
SAPRuleCategoryID	<i>Type:</i> integer. Key
	Foreign key to the rule category of the SAP rule.
TitleResourceName	<i>Type:</i> text (max 256 characters). Nullable
	A localizable resource string representing an SAP rule type. Foreign key to
	the ComplianceResourceString table.
TitleDefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the rule type resource string has no translation.
RuleTemplate	<i>Type:</i> text
	The template used to build a rule for the SAP rules engine.
DefaultRuleDefinition	<i>Type:</i> text. Nullable
	Default rule definition for newly created SAP rule

SAPSecurityUser Table

This table stores the operators allowed to access SAP objects.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 573: Database columns for SAPSecurityUser table

Database Column	Details
SAPSecurityUserID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP security user table.
TargetTypeID	<i>Type:</i> integer. Key Target type of object with restricted access.
SAPSystemLandscapeID	<i>Type:</i> integer. Key. Nullable The unique identifier of an SAP system landscape.

Database Column	Details
SAPSystemID	<i>Type:</i> integer. Key. Nullable
	The unique identifier of an SAP system.
SAPRuleSetID	<i>Type:</i> integer. Key. Nullable
	The unique identifier of an SAP rule set.
ResourceID	<i>Type:</i> integer
	The unique identifier of a security resource.
ActionClassID	<i>Type:</i> integer
	The unique identifier of a security action class.
ComplianceOperatorID	<i>Type:</i> integer. Key
	The unique identifier of an operator.

SAPSystem Table

This table stores the data specific to the definition of SAP systems.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 574: Database columns for SAPSystem table

Database Column	Details
SAPSystemID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP system.
SystemName	<i>Type:</i> text (max 128 characters) The name of the SAP system.
SystemDescription	<i>Type:</i> text. Nullable A more detailed description of the SAP system.
SAPSystemLandscapeID	<i>Type:</i> integer. Key Foreign key to the system landscape that the SAP system belongs to.
SAPSystemGroupID	<i>Type:</i> integer. Key. Nullable Foreign key to the system group that the SAP system belongs to.
SAPSystemEnvironmentID	<i>Type:</i> integer. Key. Nullable The type of environment for the SAP system.

Database Column	Details		
SystemID	<i>Type:</i> text (max 64 characters)		
	The System ID that is used to identify the SAP system.		
ClientID	<i>Type:</i> text (max 32 characters)		
	The Client ID that is to be used when connecting to the SAP system.		
ServerName	<i>Type:</i> text (max 256 characters). Nullable		
	The DNS name of the SAP system. This value will be used by the RFC connection. This field can also store the SAP System's IP address.		
SystemNumber	<i>Type</i> : text (max 32 characters). Nullable		
	The SAP system number. This value will be used by the RFC connection.		
Username	<i>Type</i> : text (max 256 characters). Nullable		
	The user name that is to be used when connecting to the SAP system.		
Password	<i>Type</i> : binary. Nullable		
	The password that is to be used when connecting to the SAP system.		
IsOfflineSystem	<i>Type:</i> boolean		
	Indicates whether an SAP system is offline.		
IsPortalSystem	<i>Type:</i> boolean		
	Indicates whether the system is a portal system.		
SystemStatus	<i>Type:</i> text (max 128 characters). Nullable		
	The status of the SAP system.		
UsersControlledByCUA	<i>Type:</i> boolean		
	Identifies whether the uses on the SAP system are controlled by a CUA.		
ModelView	<i>Type:</i> text (max 128 characters). Nullable		
	Further clarification required.		
CUACentralSystem	<i>Type:</i> boolean		
	The status of the SAP system.		
CUACentralSystemID	<i>Type:</i> text (max 128 characters). Nullable		
	The System ID of the CUA system that this SAP system is controlled by.		
FNMSAPRelease	<i>Type:</i> text (max 128 characters). Nullable		
	The version of FNM for SAP installed on the SAP system.		
LAWVersion	<i>Type:</i> text (max 128 characters). Nullable		
	The version of the License Assignment Workbench module installed on the SAP system.		

Database Column	Details		
SAPRelease	Type: text (max 128 characters). Nullable		
	The version of SAP installed on the SAP system.		
SAPPatchRelease	Type: text (max 128 characters). Nullable		
	The SAP patch version		
STPIRelease	<i>Type</i> : text (max 128 characters). Nullable		
	The ST-PI version		
DBSystem	Type: text (max 128 characters). Nullable		
	The database system running on the SAP system.		
HardwareKey	<i>Type</i> : text (max 128 characters). Nullable		
	The hardware key of the SAP system.		
InstallationNumber	<i>Type</i> : text (max 128 characters). Nullable		
	The SAP system installation number		
LastChangedOn	<i>Type</i> : datetime. Nullable		
	The date and time the SAP system data was last refreshed.		
SupportPackage	<i>Type:</i> text (max 128 characters). Nullable		
	The support package of the SAP system.		
HRSystem	<i>Type:</i> text (max 128 characters). Nullable		
	The SAP system which contains the HR data.		
SystemType	Type: text (max 128 characters). Nullable		
	Indicates whether the SAP system is an ABAP or JAVA based system.		
DefaultLicenseType	<i>Type</i> : text (max 2 characters). Nullable		
	Default license type for the SAP system.		
ContactFirstName	Type: text (max 128 characters). Nullable		
	First name of the contact for this system.		
ContactLastName	<i>Type</i> : text (max 128 characters). Nullable		
	Last name of the contact for this system.		
ContactBusinessPhone	<i>Type</i> : text (max 30 characters). Nullable		
Number	Business phone number of the contact for this system.		
ContactMobilePhoneNumber	<i>Type</i> : text (max 30 characters). Nullable		
	Mobile phone number of the contact for this system.		
ContactEmail	<i>Type</i> : text (max 200 characters). Nullable		
	Email address of the contact for this system.		

Database Column	Details	
Location	Type: text (max 128 characters). Nullable	
	Location of this system.	
InventoryDate	<i>Type</i> : datetime. Nullable	
	The date and time the SAP system data was collected by SAP Reader.	
CreationUser	<i>Type</i> : text (max 256 characters)	
	The user who created the system landscape.	
CreationDate	<i>Type</i> : datetime	
	The data and time the system landscape was created.	
UpdatedUser	<i>Type</i> : text (max 256 characters)	
	The last user who update the system landscape.	
UpdatedDate Type: datetime		
	The date and time the system landscape was last updated.	
SecurityTypeID	<i>Type</i> : integer. Key	
	Security type for this object. Foreign key to the SecurityType table.	
AccessToModuleData	<i>Type</i> : boolean	
	Indicates whether the system has access to module data.	
SAPSystemTypeID	<i>Type</i> : integer	
	The type of system for the system. Foreign key to the SAPSystemType table.	
SAPConnectivityTypeID	<i>Type</i> : integer. Nullable	
	The type of connectivity for the SAP system. Foreign key to the	
	SAPConnectivityType table.	
SAPConnectivity	<i>Type:</i> integer. Nullable	
DirectionTypeID	The type of SAP connectivity direction for the SAP system. Foreign key to the SAPConnectivityDirectionType table.	
BeaconUID	<i>Type</i> : unique identifier. Key. Nullable	
	The inventory beacon where this connection is defined.	
SAPSystemRoleTypeID	<i>Type:</i> integer. Nullable	
	The type of SAP SystemRole for the SAP system. Foreign key to	
	SAPSystemRoleType Table	
MasterSAPSystemID	<i>Type</i> : integer. Nullable	
	A unique identifier for the Master SAP system.	

Database Column	Details	
SAPSystemClassID	<i>Type:</i> integer. Key. Nullable The class of SAP system. Foreign key to the SAPPlatformType table.	
SAPSystemMigration StatusID	<i>Type:</i> integer. Nullable Migration status of the SAP system. Foreign key to the SAPSystemMigrationStatus table.	

SAPSystemActivityCheckSummary Table

This table stores the link between SAP System and SAP Activity Check Summary data.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 575: Database columns for SAPSystemActivityCheckSummary table

Database Column	Details
SAPSystemActivityCheck SummaryID	<i>Type:</i> integer. Key. Generated ID A unique identifier.
SAPSystemID	<i>Type:</i> integer. Key The Non-SAP system foreign key.
SAPActivityCheckSummaryID	<i>Type:</i> integer. Key The SAP Activity Check Summary data foreign key.

SAPSystemClass Table

This table stores classes of SAP systems e.g. S/4Hana, Classic Business Suite

Table 576: Database columns for SAPSystemClass table

Database Column	Details
SAPSystemClassID	<i>Type</i> : integer. Key. Generated ID A unique identifier for the SAP system class.

Database Column	Details		
ClassName	<i>Type:</i> text (max 64 characters). Key		
	A unique lookup for each SAPSystemClass. Possible values and the corresponding default strings are:		
	ClassicBusinessSuite		
	• S4Hana		
ResourceName	<i>Type:</i> text (max 256 characters). Nullable		
	A localizable resource string representing a SAP system class. Foreign key to		
	the ComplianceResourceString table.		
DefaultValue	<i>Type:</i> text (max 100 characters)		
	The text to display if the SAP system class resource string has no translation.		

SAPSystemEngineMetric Table

This table stores the value of applications engine metrics per system.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 577: Database columns for SAPSystemEngineMetric table

Database Column	Details		
SAPSystemEngineMetricID	<i>Type</i> : integer. Key. Generated ID		
	A unique identifier for the SAP system engine metric name table.		
SAPEngineID	<i>Type:</i> integer. Key		
	The unique identifier of an SAP engine.		
SAPEngineMetricID	<i>Type:</i> integer. Key		
	The unique identifier of an SAP engine metric.		
SAPSystemID	<i>Type:</i> integer. Key		
	The unique identifier of an SAP system.		
SAPEnginePeriodTypeID	<i>Type</i> : integer. Key		
	A unique identifier for the SAP engine period type.		
MetricValue	<i>Type:</i> decimal		
	The value of the application engine metric.		

Database Column	Details	
PeriodStartDate	<i>Type</i> : datetime. Key. Nullable The start date of the SAP application engine metric calculation period.	
PeriodEndDate	<i>Type:</i> datetime. Key. Nullable The end date of the SAP application engine metric calculation period.	
CalculationDate	<i>Type:</i> datetime. Key. Nullable The date the SAP application engine metric calculation was performed.	

SAPSystemEnvironment Table

This table stores SAP System Environment.

Table 578: Database columns for	r SAPSystemEnvironment table
---------------------------------	------------------------------

Database Column	Details			
SAPSystemEnvironmentID	<i>Type:</i> integer. Key. Generated ID			
	A unique identifier for the SAP System Environment.			
EnvironmentCode	<i>Type:</i> text (max 1 characters). Key			
	A unique lookup for each SAPSystemEnvironment. Possible values and the			
	corresponding default strings are:			
	• P = Production			
	• T = Test			
	• C = Customizing			
	• D = Demo			
	• E = Training/Education			
	• S = SAP reference			
ResourceName	<i>Type:</i> text (max 256 characters)			
	A localizable resource string representing an SAP system environment name.			
	Foreign key to the ComplianceResourceString table.			
DefaultValue	<i>Type:</i> text (max 100 characters)			
	The text to display if the SAP system environment resource string has no translation.			

SAPSystemGroup Table

This table stores the data specific to the definition of SAP system groups.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 579: Database columns	for SAPSyst	temGroup table
-----------------------------	-------------	----------------

Database Column	Details
SAPSystemGroupID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP system group.
GroupName	<i>Type:</i> text (max 128 characters). Key
	The name of the SAP system group.
GroupDescription	<i>Type:</i> text. Nullable
	A more detailed description of the SAP system group.
SAPSystemLandscapeID	<i>Type:</i> integer. Key
	Foreign key to the system landscape that the SAP system group belongs to.
ParentSAPSystemGroupID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the SAP system group that is its parent. This field will be null if the SAP system group is itself a top level SAP system group.
CreationUser	<i>Type:</i> text (max 256 characters)
	The user who created the system landscape.
CreationDate	<i>Type</i> : datetime
	The data and time the system landscape was created.
UpdatedUser	<i>Type:</i> text (max 256 characters)
	The last user who update the system landscape.
UpdatedDate	<i>Type</i> : datetime
	The date and time the system landscape was last updated.

SAPSystemLandscape Table

This table stores the data specific to the definition of system landscapes.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 580: Database columns for SAPSystemLandscape table

Database Column	Details
SAPSystemLandscapeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the system landscape.
LandscapeUID	<i>Type:</i> text (max 128 characters). Key
	A global unique identifier for the system landscape.
LandscapeName	<i>Type</i> : text (max 128 characters)
	A unique identifier for the system landscape.
LandscapeDescription	<i>Type:</i> text. Nullable
	A more detailed description of the SAP system group.
SAPSystemLandscape	<i>Type:</i> integer
StatusID	Identifies whether this system landscape is actively being used in the license optimization process.
LocationID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any enterprise location associated with this landscape. Foreign key to the GroupEx table.
BusinessUnitID	<i>Type</i> : text (max 128 characters). Key. Nullable
	Any corporate unit in the enterprise associated with this landscape. Foreign key to the GroupEx table.
CostCenterID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any cost center in the enterprise associated with this landscape. Foreign key to the GroupEx table.
CategoryID	<i>Type:</i> text (max 128 characters). Key. Nullable
	Any enterprise category associated with this landscape. Foreign key to the GroupEx table.
CreationUser	<i>Type:</i> text (max 256 characters)
	The user who created the system landscape.
CreationDate	<i>Type:</i> datetime
	The data and time the system landscape was created.
UpdatedUser	<i>Type:</i> text (max 256 characters)
	The last user who update the system landscape.
UpdatedDate	<i>Type:</i> datetime
	The date and time the system landscape was last updated.

Database Column	Details
SecurityTypeID	<i>Type</i> : integer Security type for this object. Foreign key to the SecurityType table.
CanRebalanceLicenseTypes	<i>Type:</i> boolean Indicates whether license types can be rebalanced to use excess purchases of higher license types.

SAPSystemLandscapeEngine Table

This table stores an engine in the system landscape.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 581: Database columns for SAPSystemLandscapeEngine table

Database Column	Details
SAPSystemLandscape	<i>Type:</i> integer. Key. Generated ID
EngineID	A unique identifier for the SAP system landscape engine table.
SAPSystemLandscapeID	<i>Type:</i> integer. Key
	Foreign key to the system landscape that the SAP engine belongs to.
EngineUID	<i>Type:</i> text (max 128 characters). Key
	A global unique identifier for the SAP engine in a system landscape.
EngineName	<i>Type:</i> text (max 128 characters)
	Name of engine.
EngineDescription	<i>Type:</i> text. Nullable
	Description of engine.
ApplicationID	<i>Type:</i> integer. Nullable
	SAP internal application ID
IsActive	<i>Type:</i> boolean
	Whether or not the engine is active for inclusion in license position.
NumberPurchased	<i>Type:</i> integer. Nullable
UnitPrice	<i>Type:</i> currency. Nullable
UnitPriceRateID	<i>Type:</i> integer. Nullable

Database Column	Details
SAPContentEngineID	<i>Type:</i> integer. Key. Nullable
	A unique identifier for the SAP content engine table.
SAPContentEngineRuleID	<i>Type:</i> integer. Key. Nullable
	A unique identifier for the SAP content engine rule table.
CustomRuleDefinition	<i>Type</i> : text. Nullable
	Custom rule definition for calculating consumption of an engine.
CustomTotalConsumption	<i>Type</i> : integer. Nullable
	Self-declared total consumption.
UseCustomTotalConsumption	
	Use CustomTotalConsumption
ConsumptionUnit	<i>Type</i> : text. Nullable
	Unit description to describe the consumption amount.
CreationUser	<i>Type:</i> text (max 256 characters)
	The user who created the system landscape.
CreationDate	<i>Type:</i> datetime
	The data and time the system landscape was created.
UpdatedUser	<i>Type:</i> text (max 256 characters)
	The last user who update the system landscape.
UpdatedDate	<i>Type:</i> datetime
	The date and time the system landscape was last updated.

SAPSystemLandscapeEngineMapping Table

This table stores mapping between SAP system landscape engines to either System Landscapes, System Groups or SAP systems.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SAPSystemLandscape	<i>Type</i> : integer. Key. Generated ID
EngineMappingID	A unique identifier for the SAP system landscape engine mapping.

Database Column	Details
SAPSystemLandscape	<i>Type</i> : integer. Key
EngineID	Foreign key to SAPSystemLandscapeEngine ID
SAPSystemLandscapeID	<i>Type:</i> integer. Key. Nullable
	Foreign key to System Landscape ID
SAPSystemGroupID	<i>Type:</i> integer. Key. Nullable
	Foreign key to System Group ID.
SAPSystemID	<i>Type:</i> integer. Key. Nullable
	Foreign key to the SAP system.
CreationUser	<i>Type:</i> text (max 256 characters)
	The user who created the system landscape.
CreationDate	<i>Type:</i> datetime
	The data and time the system landscape was created.
UpdatedUser	<i>Type:</i> text (max 256 characters)
	The last user who update the system landscape.
UpdatedDate	<i>Type:</i> datetime
	The date and time the system landscape was last updated.

SAPSystemLandscapeLicenseType Table

This table stores SAP license types belonging to SAP system landscapes.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 583: Database columns for SAPSystemLandscapeLicenseType table

Database Column	Details
SAPSystemLandscape LicenseTypeID	<i>Type</i> : integer. Key. Generated ID A unique identifier for SAP system landscape license type.
SAPSystemLandscapeID	<i>Type</i> : integer. Key Foreign key to SAP system landscape.
Identifier	<i>Type</i> : text (max 2 characters). Key The SAP license type identifier.

Database Column	Details
ShortName	<i>Type:</i> text (max 128 characters). Nullable
	The SAP license type short name.
LongName	<i>Type:</i> text (max 256 characters). Nullable
	The SAP license type long name.
Active	<i>Type:</i> boolean
	Indicate whether the SAP license is active or not.
NumberPurchased	<i>Type:</i> integer. Nullable
	Number purchased.
UnitPrice	<i>Type:</i> currency. Nullable
	Unit price of an SAP license type.
UnitPriceRateID	<i>Type:</i> integer. Nullable
	The unit price rate of an SAP license type.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The user who created the SAP license type.
CreationDate	<i>Type:</i> datetime
	The data and time the SAP license type was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The last user who update the SAP license type.
UpdatedDate	<i>Type:</i> datetime
	The date and time the SAP license type was last updated.
AllowLicenseBalancing	<i>Type:</i> boolean
	Indicates whether license types can be rebalanced to use excess purchases of higher license types.

SAPSystemLandscapeLicenseTypeHierarchy Table

This table stores the SAP license hierarchy for an SAP system landscape.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SAPSystemLandscape LicenseTypeHierarchyID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the license type hierarchy
SAPSystemLandscape LicenseTypeID	<i>Type:</i> integer. Key A parent system landscape license type. Foreign key to SAP system landscape license type.
ChildSAPSystem LandscapeLicenseTypeID	<i>Type:</i> integer. Key A child system landscape license type. Foreign key to SAP system landscape license type.

 Table 584:
 Database columns for SAPSystemLandscapeLicenseTypeHierarchy table

SAPSystemLandscapeLicenseTypeImport Table

This table stores the imported SAP license type.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
SAPSystemLandscape	<i>Type:</i> integer. Key. Generated ID
LicenseTypeImportID	A unique identifier for the imported SAP license type.
SAPSystemLandscapeID	<i>Type:</i> integer. Key
	Foreign key to SAP system landscape.
SAPSystemID	<i>Type:</i> integer. Key
	Foreign key to SAP system
SystemName	<i>Type</i> : text (max 128 characters). Nullable
	The SAP system name.
ImportUser	<i>Type:</i> text (max 128 characters). Nullable
	The user who imported the SAP license type
ImportDate	<i>Type:</i> datetime
	The data and time the SAP license type was imported

Table 585: Database columns for SAPSystemLandscapeLicenseTypeImport table

SAPSystemLandscapeStatus Table

This table stores SAP System Landscape status.

Table 586: Database columns for	r SAPSystemLandscapeStatus table
---------------------------------	----------------------------------

Database Column	Details
SAPSystemLandscape StatusID	 Type: integer. Key. Generated ID A unique identifier for each SAPSystemLandscapeStatus. Possible values and the corresponding default strings are: 1 = Inactive 2 = Active
	 3 = Archived 4 = Simulation
ResourceName	<i>Type</i> : text (max 256 characters). Key A localizable resource string representing an SAP System Landscape status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type</i> : text (max 100 characters) The text to display if the status resource string has no translation.

SAPSystemMigrationStatus Table

This table stores SAP system migration status.

Database Column	Details
SAPSystemMigration StatusID	<pre>Type: integer. Key. Generated ID A unique identifier for each SAPSystemMigrationStatusID. Possible values and the corresponding default strings are: 1 = NotPlanned 2 = Planned 3 = InProgress 4 = Completed</pre>

Database Column	Details
ResourceName	<i>Type:</i> text (max 256 characters). Key A localizable resource string representing a SAP system migration status. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters) The text to display if the status resource string has no translation.

SAPSystemModule Table

This table stores the modules used in SAP and the system they are used on.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 588: Database columns for SAPSystemModule table

Database Column	Details
SAPSystemModuleID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP system module table.
SAPSystemID	<i>Type:</i> integer. Key The unique identifier of an SAP system.
SAPModuleID	<i>Type:</i> integer. Key The unique identifier of an SAP module.

SAPSystemObject Table

This table stores objects belonging to SAP systems

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 589: Database columns for SAPSystemObject table

Database Column	Details
SAPSystemObjectID	<i>Type:</i> integer. Generated ID A unique identifier for the SAP system object

Database Column	Details
SAPSystemID	<i>Type</i> : integer. Key Foreign key to the SAP system that the object belongs to.
SAPObjectID	<i>Type:</i> integer. Key Foreign key to the SAP object.

SAPSystemPriceList Table

This table stores the SAP system price list.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 590: Database columns for SAPSystemPriceList table

Database Column	Details
SAPSystemPriceListID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP system price list.
SAPSystemID	<i>Type:</i> integer. Key Foreign key to the system that the price list belongs to.
PriceListID	<i>Type:</i> text (max 2 characters). Key SAP Price List ID
DefaultLicenseType	<i>Type:</i> text (max 2 characters). Nullable LicenseType associated to this price list
IsActive	<i>Type:</i> boolean Indicates whether the price list is active or not active.
Surcharge	<i>Type:</i> boolean Indicates whether the price list affected by surcharge.

SAPSystemPriceListName Table

This table stores the SAP system price name in multiple languages.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 591: Database columns for SAPSystemPriceListName table

Database Column	Details
SAPSystemPriceListNameID	<i>Type:</i> integer. Key. Generated ID A unique identifier for the SAP system price list name.
SAPSystemPriceListID	<i>Type:</i> integer. Key Foreign key to the SAP price list.
Language	<i>Type:</i> text (max 4 characters) A unique code to identify the language.
PriceListName	<i>Type:</i> text (max 128 characters). Nullable The name of the SAP price list.

SAPSystemRFCConnectionSummary Table

This table stores the link between SAP System and RFC Consumption.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 592: Database columns for SAPSystemRFCConnectionSummary table

Database Column	Details
SAPSystemRFCConnection SummaryID	<i>Type:</i> integer. Key. Generated ID A unique identifier.
SAPSystemID	<i>Type:</i> integer. Key The Non-SAP system
SAPRFCConnectionSummaryID	<i>Type:</i> integer. Key The RFC consumption.

SAPSystemRoleType Table

This table stores SAP System Role Type.

Table 593: Database columns for SAPSystemRoleType table

Database Column	Details
SAPSystemRoleTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP System Role type.
TypeName	<i>Type:</i> text (max 64 characters). Key
	A unique lookup for each SAPSystemRoleType. Possible values and the
	corresponding default strings are:
	AdminModule
	IndependentSAPSystem
	DependentSAPSystem
ResourceName	<i>Type:</i> text (max 256 characters). Nullable
	A localizable resource string representing an SAP System Role type. Foreign
	key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the SAP System Role type resource string has no translation.

SAPSystemType Table

This table stores SAP system type.

Table 594:	Database	columns for	r SAPSystemTy	/pe table
------------	----------	-------------	---------------	-----------

Database Column	Details		Details	
SAPSystemTypeID	<i>Type:</i> integer. Key. Generated ID			
	A unique identifier for the SAP system type.			
TypeName	<i>Type:</i> text (max 64 characters). Key			
	A unique lookup for each SAPSystemType. Possible values and the			
	corresponding default strings are:			
	• SAP			
	• NonSAP			
ResourceName	<i>Type:</i> text (max 256 characters). Nullable			
	A localizable resource string representing an SAP system type. Foreign key			
	to the ComplianceResourceString table.			

Database Column

Details

DefaultValue

Type: text (max 100 characters)

The text to display if the SAP system type resource string has no translation.

SAPTransactionProfile Table

This table stores SAP transaction profiles.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 595: Database columns for SAPTransactionProfile table

Database Column	Details
SAPTransactionProfileID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP transaction profile.
SAPSystemLandscapeID	<i>Type:</i> integer. Key
	Foreign key to SAP system landscapes the SAP transaction profile belongs to.
TransactionProfileName	<i>Type:</i> text (max 128 characters)
	Name of the SAP transaction profile
Description	<i>Type:</i> text. Nullable
	Description of the SAP transaction profile
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The user who created the SAP transaction profile.
CreationDate	<i>Type:</i> datetime
	The data and time the SAP transaction profile was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The last user who update the SAP transaction profile.
UpdatedDate	<i>Type:</i> datetime
	The date and time the SAP transaction profile was last updated.

SAPTransactionProfileObject Table

This table stores the linking between SAP transaction profile and SAP object.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 596:
 Database columns for SAPTransactionProfileObject table

Database Column	Details
SAPTransactionProfile	<i>Type:</i> integer. Key. Generated ID
ObjectID	A unique identifier for the SAP transaction profile object
SAPTransactionProfileID	<i>Type</i> : integer. Key
	Foreign key to an SAP transaction profile.
ObjectName	<i>Type</i> : text (max 128 characters)
	The SAP object name
Description	<i>Type:</i> text. Nullable
	The SAP object description
IsTransaction	<i>Type:</i> boolean
	Indicates whether the object is of type Transaction
IsReport	<i>Type</i> : boolean
	Indicates whether the object is of type Report
IsJob	<i>Type</i> : boolean
	Indicates whether the object is of type Job
IsExcludedFromProfile	<i>Type</i> : boolean
	Indicates whether the object is marked as excluded from this profile.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The user who created the profile and object link.
CreationDate	<i>Type</i> : datetime
	The data and time the profile and object link was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The last user who update the profile and object link.
UpdatedDate	<i>Type:</i> datetime
	The date and time the profile and object link was last updated.
IsNonSAP	<i>Type:</i> boolean
	Indicates whether the object is of type Non-SAP

SAPUser Table

This table stores the data specific to the definition of SAP users.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 597:	Database	columns f	for SAPl	Jser table
------------	----------	-----------	----------	------------

Database Column	Details
SAPUserID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for the SAP user.
SAPSystemID	<i>Type:</i> integer. Key
	Foreign key to the system that the user belongs to.
UserName	<i>Type:</i> text (max 256 characters). Key
	The SAP user's username.
FirstName	<i>Type:</i> text (max 40 characters). Nullable
	The SAP user's first name.
LastName	<i>Type:</i> text (max 40 characters). Nullable
	The SAP user's last name.
ValidFrom	<i>Type:</i> datetime. Nullable
	The date that the SAP user is valid from on the SAP system.
ValidTo	<i>Type:</i> datetime. Nullable
	The date that the SAP user is valid to on the SAP system.
UserType	<i>Type:</i> text (max 1 characters). Nullable
	The type of user the SAP user is.
LicenseType	<i>Type:</i> text (max 2 characters). Nullable
	The type of license assigned to the SAP user.
UserGroup	<i>Type:</i> text (max 12 characters). Nullable
	The user group the SAP user belongs to.
LastLogonDate	<i>Type:</i> datetime. Nullable
	The date when the SAP user last logged on to the SAP system.
IsDeveloper	<i>Type:</i> boolean
	Indicates whether the SAP user is a developer or not.

Database Column	Details
UserCreationDate	<i>Type:</i> datetime. Nullable
	The date the SAP user was created.
EmailAddress	<i>Type:</i> text (max 128 characters). Nullable
	The SAP user's email address.
TelephoneNumber	<i>Type:</i> text (max 30 characters). Nullable
	The SAP user's telephone number.
TelephoneExtension	<i>Type</i> : text (max 10 characters). Nullable
	The SAP user's telephone extension.
AccountID	<i>Type:</i> text (max 12 characters). Nullable
	The SAP user's account ID.
CostCenter	<i>Type:</i> text (max 8 characters). Nullable
	The cost center the SAP user belongs to.
CompanyName1	<i>Type:</i> text (max 40 characters). Nullable
	The name of the company the SAP user belongs to.
CompanyName2	<i>Type:</i> text (max 40 characters). Nullable
	The name of a second company the SAP user belongs to.
Department	<i>Type:</i> text (max 40 characters). Nullable
	The department the SAP user belongs to.
UserFunction	<i>Type:</i> text (max 40 characters). Nullable
UserLockStatus	<i>Type:</i> integer. Nullable
	User lock status.
SpecialVersionAssignment	<i>Type:</i> text (max 2 characters). Nullable
CountrySurcharge	<i>Type:</i> text (max 4 characters). Nullable
RepresentativeFromDate	<i>Type:</i> datetime. Nullable
RepresentativeToDate	<i>Type:</i> datetime. Nullable
IsDeleted	<i>Type:</i> boolean
	Indicated whether the SAP user has been deleted or not.
ChargeableUserClient	<i>Type:</i> text (max 32 characters). Nullable
ChargeableUserSysID	<i>Type:</i> text (max 32 characters). Nullable
ChargeableUserName	<i>Type:</i> text (max 12 characters). Nullable

Database Column	Details	
RemoteServerUserName	<i>Type</i> : text (max 64 characters). Nullable	

Remote server user name

SAPUserRole Table

This table stores SAP users and its SAP role memberships

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 598: Database columns for SAPUserRole table

Database Column	Details
SAPUserRoleID	Type: integer. Key. Generated ID
	A unique identifier for SAP user role.
SAPUserID	<i>Type:</i> integer. Key
	Foreign key to the SAP user that the role belongs to.
SAPRoleID	<i>Type:</i> integer. Key
	Foreign key to SAP role.
ValidFrom	<i>Type:</i> datetime. Nullable
	The date that the SAP role is valid from.
ValidTo	<i>Type:</i> datetime. Nullable
	The date that the SAP role is valid to.

SAPUserType Table

This table stores SAP User type.

Table 599: Database columns for SAPUserType table

Database Column	Details
SAPUserTypeID	<i>Type:</i> integer. Key. Generated ID

Database Column	Details
UserTypeCode	<i>Type:</i> text (max 1 characters). Key
	A unique lookup for each SAPUserType. Possible values and the corresponding default strings are:
	• A = Dialog
	• B = System
	• C = Communication Data
	• D = BDC
	• L = Reference
	• S = Service
ResourceName	<i>Type</i> : text (max 256 characters)
	A localizable resource string representing an SAP user type. Foreign key to
	the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the system type resource string has no translation.

ManageSoft Tables

The complete set of database tables documented here includes:

• DatabaseConfiguration table (see DatabaseConfiguration Table)

DatabaseConfiguration Table

The DatabaseConfiguration table contains configuration properties for the FlexNet Manager Suite database tables, which are used for ongoing maintenance of the database.

Database Column	Details
Property	<i>Type</i> : text (max 32 characters). Key The name of the property.
Value	<i>Type:</i> text (max 256 characters) The value of the property.
Created	<i>Type:</i> datetime The date and time the property was created.

Table 600: Database columns for DatabaseConfiguration table

Database Column	Details	

LastUpdate

Type: datetime

The date and time the property was last updated.

ReferenceData Tables

The complete set of database tables documented here includes:

- Country table (see Country Table)
- Language table (see Language Table)
- Locale table (see Locale Table)

Country Table

Stores country information, including their ISO country code and English names.

Table 601: Database columns for Country table

Database Column	Details
CountryCode	<i>Type:</i> text (max 2 characters). Key The two letter country code.
Name	<i>Type:</i> text (max 128 characters). Key The english name of the country.

Language Table

Stores language information, including their English names, and various forms of language id.

Table 602: Database columns for Langu	uage table
---------------------------------------	------------

Database Column	Details
LangCode3	<i>Type</i> : text (max 3 characters). Key The three letter language code.
LangCode2	<i>Type:</i> text (max 2 characters). Nullable The two letter language code.
EnglishName	<i>Type:</i> text (max 128 characters). Key The english name of the language.

Database Column	Details
LocalName	<i>Type:</i> text (max 128 characters). Nullable The name of the language, written in the local language.
MSLanguageID	<i>Type:</i> integer. Nullable The Microsoft language id, as specified in winnt.h in the Platform SDK.

Locale Table

Stores locale information, which consists of country and language combinations. Use the LocaleCode column as the foreign key into this table.

Table 603: Database columns for Locale table

Database Column	Details
LocaleCode	<i>Type:</i> text (max 6 characters). Key
	A combination of the language code and country code, separated by a hyphen. If there is no country code, then there will be no hyphen added. This column MUST have the correct value when inserted, based on the values of the language and country codes.
LangCode3	<i>Type:</i> text (max 3 characters). Key
	The three letter language code.
CountryCode	<i>Type:</i> text (max 2 characters). Key. Nullable
	The two letter country code.
LocaleName	Type: text (max 128 characters)
	The name of the locale. For example, "English (United States)".
MSLocaleID	<i>Type</i> : integer. Nullable
	The Microsoft identifier for the locale. For example, 1033 for English (United States).

Rights Tables

The complete set of database tables documented here includes:

- ActionClass table (see ActionClass Table)
- PartitionType table (see PartitionType Table)
- Resource table (see Resource Table)

ActionClass Table

The types of action on a Resource for which rights may be granted or denied.

Table 604: Database	columns for	ActionClass table	
---------------------	-------------	-------------------	--

Database Column	Details
ActionClassID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number.
ActionClassName	<i>Type:</i> text (max 16 characters). Key The name of the ActionClass.

PartitionType Table

Some secured Resources may be partitioned. Partitions are used to grant rights to one part of a Resource excluding other parts, for example limiting rights so that the operator can access only certain distribution servers, organizational units, or areas in the software library. There are three types of partitioning, defined by entries in this table.

Table 605: Database columns for PartitionType table

Database Column	Details
PartitionTypeID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number.
PartitionTypeName	<i>Type:</i> text (max 32 characters). Key Name of the PartitionType.

Resource Table

Access rights are granted to the Resources defined in this table.

Database Column	Details
ResourceID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number.
ResourceName	<i>Type:</i> text (max 16 characters). Key Name of the Resource.

Table 606: Database columns for Resource table

Database Column	Details
PartitionTypeID	<i>Type:</i> integer. Nullable
	If not NULL, the type of partitioning used with this Resource.

Targeting Tables

The complete set of database tables documented here includes:

• TargetType table (see TargetType Table)

TargetType Table

The TargetType table contains a row for each type of object that can be targeted in FlexNet Manager Suite.

Table 607: Database columns for TargetType table

Database Column	Details
TargetTypeID	Type: integer. Key. Generated ID The ID for the target type: • Computers • Users • Group • DistributionLocation • DistributionServer
	OrganizationAssets
	Contracts

- Purchase orders
- Software licenses
- Software titles
- Compliance computers
- Compliance users
- Operators
- SAP system landscapes
- SAP systems
- SAP rule sets
- Discovered devices
- Beacon
- Vendor
- Device
- Rule
- Inventory connection
- FNMP Server
- Fast Import
- OLE DB Connection
- ORACLE Connection

Database ColumnDetails• XML• Intermediate File• ADSI Connection• Web Service• SQL Connection• Software Title Evidence• FNMEA Agent• Installed Software• Baseline ImportTargetTypeNameType: text (max 256 characters). Key
The name of the target type.

Tenants Tables

The complete set of database tables documented here includes:

- FlexeraLicense table (see FlexeraLicense Table)
- Tenant table (see Tenant Table)

FlexeraLicense Table

The FlexeraLicense table contains the encoded contents of the Flexera Software licenses required for the tenants in the system. This table is also used by the system in the single-tenant setup where there is only one tenant.

Table 608: Database columns for FlexeraLicense table

Database Column	Details
TenantUID	<i>Type</i> : text (max 40 characters). Key The unique identifier of a tenant. A reference to the Tenant to which this license is attached.
License	<i>Type:</i> text The encoded contents of the Flexera Software license attached to a particular Tenant.

Database Column	Details
LicenseChecksum	<i>Type:</i> integer. Key The check sum of the license.
LicenseDetails	<i>Type</i> : XML. Nullable XML definition of the license details

Tenant Table

The Tenant table contains the details of each tenant in multitenant FlexNet Manager Suite database tables.

Table 609: Database columns for Tenant table

Database Column	Details
TenantID	<i>Type:</i> integer. Key. Generated ID
	The tenant ID in a multi-tenant database.
TenantUID	<i>Type:</i> text (max 40 characters). Key
	The unique identifier of a tenant. This identifier is used to identify the tenant
	in environments where tenant information is stored on multiple databases.
TenantName	<i>Type:</i> text (max 256 characters). Key
	The name of the tenant.
TenantDomain	<i>Type:</i> text (max 20 characters). Nullable
	The sub-domain to use for the tenant.
Comments	<i>Type:</i> text. Nullable
	Operator comments about this tenant record.
CreationUser	<i>Type:</i> text (max 128 characters). Nullable
	The operator who created the tenant record.
CreationDate	<i>Type</i> : datetime
	The date the tenant record was created.
UpdatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The name of the operator who last updated the tenant record.
UpdatedDate	<i>Type:</i> datetime. Nullable
	The date the tenant record was last updated.

3

Dashboard Database Schema

This chapter describes the schema used for customized dashboards using the Analytics feature (powered by Cognos) of FlexNet Manager Suite.

There are three separate data models related to IBM Cognos within FlexNet Manager Suite:

- A model for use when customizing dashboards for FlexNet Manager Suite, which is the subject of this chapter
- · An operational model for reporting on live data (this model is not separately documented)
- The dimensional data model for reporting on data that changes over time (see DataWarehouse Database Schema).

Dashboard Tables

The complete set of database tables documented here includes:

- ApplicationAction_CODE table (see ApplicationAction_CODE Table)
- ApplicationCategory_CODE table (see ApplicationCategory_CODE Table)
- ApplicationClassification_CODE table (see ApplicationClassification_CODE Table)
- Application_DIM table (see Application_DIM Table)
- Application_Measurement_FACT table (see Application_Measurement_FACT Table)
- AssetStatus_CODE table (see AssetStatus_CODE Table)
- AssetType_CODE table (see AssetType_CODE Table)
- Asset_Activity_FACT table (see Asset_Activity_FACT Table)
- Asset_FACT table (see Asset_FACT Table)
- ContractStatus_CODE table (see ContractStatus_CODE Table)
- ContractType_CODE table (see ContractType_CODE Table)
- Contract_DIM table (see Contract_DIM Table)

- Contract_FACT table (see Contract_FACT Table)
- CurrencyCurrentConversion_FACT table (see CurrencyCurrentConversion_FACT Table)
- Currency_DIM table (see Currency_DIM Table)
- DiscoveredDevices_Activity_FACT table (see DiscoveredDevices_Activity_FACT Table)
- Installation_Activity_FACT table (see Installation_Activity_FACT Table)
- Inventory_DuplicateHostName_FACT table (see Inventory_DuplicateHostName_FACT Table)
- Inventory_DuplicateSerialNumber_FACT table (see Inventory_DuplicateSerialNumber_FACT Table)
- Inventory_VirtualizationType_FACT table (see Inventory_VirtualizationType_FACT Table)
- LicenseComplianceStatus_CODE table (see LicenseComplianceStatus_CODE Table)
- LicenseType_CODE table (see LicenseType_CODE Table)
- License_DIM table (see License_DIM Table)
- License_Position_FACT table (see License_Position_FACT Table)
- PurchaseStatus_CODE table (see PurchaseStatus_CODE Table)
- PurchaseType_CODE table (see PurchaseType_CODE Table)
- Purchase_DIM table (see Purchase_DIM Table)
- Purchase_Latest_FACT table (see Purchase_Latest_FACT Table)
- Purchase_Spend_FACT table (see Purchase_Spend_FACT Table)
- Purchase_Unprocessed_FACT table (see Purchase_Unprocessed_FACT Table)
- ResourceString_CODE table (see ResourceString_CODE Table)
- VMType_CODE table (see VMType_CODE Table)

ApplicationAction_CODE Table

ApplicationAction_CODE is an enumerated code table for application action status.

Database Column	Details
ActionStatusID	<i>Type:</i> integer. Key
	A unique identifier for application action status. Possible values and the corresponding default strings are:
	 1 = Unmanaged (recently created application, not yet categorized)
	• 2 = Authorized (application is authorized for use in the enterprise)
	• 3 = Unauthorized (application is not authorized for use)
	• 4 = Ignored (application will not be tracked by the enterprise)
	• 5 = Inactive (application is not in use in the enterprise).
	 6 = Deferred (application installed in enterprise but marked for later attention).
ActionStatus_en	<i>Type:</i> text (max 1000 characters)
	Action status of the application in English.
ActionStatus_de	<i>Type:</i> text (max 1000 characters)
	Action status of the application in German.
ActionStatus_fr	<i>Type:</i> text (max 1000 characters)
	Action status of the application in French.
ActionStatus_ja	<i>Type:</i> text (max 1000 characters)
	Action status of the application in Japanese.
ActionStatus_es	<i>Type:</i> text (max 1000 characters). Nullable
	Action status of the application in Spanish.

Table 610: Database columns for ApplicationAction_CODE table

ApplicationCategory_CODE Table

ApplicationCategory_CODE is an enumerated code table for UNSPSC categories.

Table 611: Database columns for ApplicationCategory_CODE table

Database Column	Details
CategoryID	<i>Type</i> : integer. Key Primary key of the category.
Category_en	<i>Type</i> : text (max 1000 characters) Category (UNSPSC) of the application in English.

Database Column	Details
Category_de	<i>Type</i> : text (max 1000 characters) Category (UNSPSC) of the application in German.
Category_fr	<i>Type:</i> text (max 1000 characters) Category (UNSPSC) of the application in French.
Category_ja	<i>Type:</i> text (max 1000 characters) Category (UNSPSC) of the application in Japanese.
Category_es	<i>Type:</i> text (max 1000 characters). Nullable Category (UNSPSC) of the application in Spanish.

ApplicationClassification_CODE Table

ApplicationClassification_CODE is an enumerated code table for application classifications.

Table 612: Database columns for	ApplicationClassification	_CODE table
---------------------------------	---------------------------	-------------

Database Column	Details
ClassificationID	<i>Type:</i> integer. Key A unique identifier for application classifications. Possible values and the corresponding default strings are:
	• 1 = Shareware
	• 2 = Freeware
	• 3 = Commercial
	• 4 = Update
	• 5 = Malware
	• 6 = Beta
	• 7 = XRated
	• 8 = None
	• 9 = Component
Classification_en	<i>Type:</i> text (max 1000 characters)
	Classification of the application in English.
Classification_de	<i>Type:</i> text (max 1000 characters)
	Classification of the application in German.

Database Column	Details
Classification_fr	<i>Type</i> : text (max 1000 characters) Classification of the application in French.
Classification_ja	<i>Type:</i> text (max 1000 characters) Classification of the application in Japanese.
Classification_es	<i>Type:</i> text (max 1000 characters). Nullable Classification of the application in Spanish.

Application_DIM Table

Application_DIM is a dimension table storing applications (specific edition and version of a product).

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ApplicationID	<i>Type:</i> integer. Key
	Primary key of the application.
FullName	<i>Type:</i> text (max 512 characters). Key
	Full name of the application.
PublisherName	<i>Type:</i> text (max 200 characters). Key
	Publisher of the application.
ProductName	<i>Type:</i> text (max 200 characters). Key
	Product name of the application.
EditionName	<i>Type:</i> text (max 50 characters)
	Edition of the application.
VersionName	<i>Type:</i> text (max 50 characters)
	Version of the application.
CategoryID	<i>Type:</i> integer. Key. Nullable
	Category ID (UNSPSC) of the application.
ClassificationID	<i>Type:</i> integer. Key
	Classification ID of the application.

Database Column	Details
ActionStatusID	<i>Type:</i> integer. Key
	Action status ID of the application.
IsManaged	<i>Type:</i> boolean
	Whether the application is a managed or unmanaged application.
StartOfLifeDate	<i>Type:</i> datetime. Key. Nullable
	Start of life Date.
ReleaseDate	<i>Type:</i> datetime. Key. Nullable
	The date the application was released.
EndOfSalesDate	<i>Type:</i> datetime. Key. Nullable
	End of sales Date.
SupportedUntil	<i>Type:</i> datetime. Key. Nullable
	The date the application will be supported.
ExtendedSupportUntil	<i>Type:</i> datetime. Key. Nullable
	The date the application will be supported, in extended case.
EndOfLifeDate	<i>Type:</i> datetime. Key. Nullable
	End of life Date.

Application_Measurement_FACT Table

Application_Measurement_FACT is a fact table storing application measurements by operator.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 614: Database columns for Application_Measurement_FACT table

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key Foreign key to the operator.
ApplicationID	<i>Type:</i> integer. Key Foreign key to the application.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable Foreign key to SoftwareLicense_DIM.

Database Column	Details
InstallCount	<i>Type:</i> big integer Number of installations of this application covered by this license.
UnlicensedInstallCount	<i>Type:</i> big integer Number of installations of this application not covered by this license.

AssetStatus_CODE Table

AssetStatus_CODE is an enumerated code table for Asset status.

Table 615: Database columns for AssetStatus_CODE table

Database Column	Details
AssetStatusID	<i>Type</i> : integer. Key
	A unique identifier for Asset status. Possible values and the corresponding default strings are:
	• 1 = Purchased
	• 2 = In Storage
	• 3 = Installed
	• 4 = Retired
	• 5 = Disposed
	• 6 = Other.
AssetStatus_en	<i>Type:</i> text (max 1000 characters)
	Status of the Asset in English.
AssetStatus_de	<i>Type:</i> text (max 1000 characters)
	Status of the Asset in German.
AssetStatus_fr	<i>Type:</i> text (max 1000 characters)
	Status of the Asset in French.
AssetStatus_ja	<i>Type:</i> text (max 1000 characters)
	Status of the Asset in Japanese.
AssetStatus_es	<i>Type:</i> text (max 1000 characters). Nullable
	Status of the Asset in Spanish.

AssetType_CODE Table

AssetType_CODE is an enumerated code table for Asset type.

Table 616: Database columns for AssetType_CODE table

Database Column	Details
AssetTypeID	 <i>Type:</i> integer. Key A unique identifier for Asset type. Possible values and the corresponding default strings are: 1 = Workstation
	 2 = Server
	 3 = Monitor
	 4 = Desk
	 5 = Chair
	• 6 = Printer
	• 7 = Router
	• 8 = Switch
	• 9 = Telephone
	• 10 = Cell phone
	• 11 = Laptop.
	• 12 = Mobile Device.
AssetType_en	<i>Type</i> : text (max 1000 characters)
	Type of the Asset in English.
AssetType_de	<i>Type:</i> text (max 1000 characters)
	Type of the Asset in German.
AssetType_fr	<i>Type</i> : text (max 1000 characters)
	Type of the Asset in French.
AssetType_ja	<i>Type:</i> text (max 1000 characters)
	Type of the Asset in Japanese.
AssetType_es	<i>Type:</i> text (max 1000 characters). Nullable
	Type of the Asset in Spanish.

Asset_Activity_FACT Table

Asset_Activity_FACT is a fact table storing assets that had activity in the last 90 days. Row count : 90 (days) * combination of AssetStatusID and AssetTypeID rows.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key
	Foreign key to the operator.
AgeInDay	<i>Type:</i> integer. Key
	The days relative to date when the table is last updated.
AssetStatusID	<i>Type:</i> integer. Key
	Asset status ID of the asset.
AssetTypeID	<i>Type</i> : integer. Key
	Asset type ID of the asset.
ActivityDate	<i>Type</i> : datetime
	The date the activity occurred.
NewCount	<i>Type</i> : integer
	Number of new assets created on this date.
LastReportedCount	<i>Type</i> : integer
	Number of assets when its inventory is last reported on this date.
OracleDBLastReportedCount	<i>Type</i> : integer
	Number of Oracle database assets when retired or disposed inventory is reported on this date.

Table 617: Database columns for Asset_Activity_FACT table

Asset_FACT Table

Asset_FACT is a fact table storing the asset count by operator.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 618: Database columns for Asset_FACT table

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key Foreign key to the operator.
AssetStatusID	<i>Type:</i> integer. Key Asset status ID.
AssetTypeID	<i>Type:</i> integer. Key Asset type ID.
TotalCount	<i>Type</i> : integer Number of assets.

ContractStatus_CODE Table

ContractStatus CODE is a dimension table storing contract status information.

Table 619: Database columns for ContractStatus_CODE table

Database Column	Details
ContractStatusID	<i>Type</i> : integer. Key A unique identifier for Contract status. Possible values and the corresponding default strings are:
	• 1 = Active
	• 2 = Archived
	• 3 = Draft
	• 4 = Suspended
	• 5 = Cancelled
	• 6 = Expired
	• 7 = Completed
ContractStatus_en	Type: text (max 1000 characters)
	Compliance status of the license in English.
ContractStatus_de	<i>Type</i> : text (max 1000 characters)
	Compliance status of the license in German.
ContractStatus_fr	<i>Type</i> : text (max 1000 characters)
	Compliance status of the license in French.

Database Column	Details
ContractStatus_ja	<i>Type:</i> text (max 1000 characters) Compliance status of the license in Japanese.
ContractStatus_es	<i>Type:</i> text (max 1000 characters) Compliance status of the license in Spanish.

ContractType_CODE Table

ContractType CODE is a dimension table storing contract type information.

 Table 620:
 Database columns for ContractType_CODE table

Database Column	Details
ContractTypeID	<i>Type:</i> integer. Key
	A unique identifier for Contract type. Possible values and the corresponding default strings are:
	• 1 = General
	• 2 = Lease
	• 3 = Hardware Maintenance and Support
	• 4 = Software License
	• 5 = Software Maintenance and Support
	• 6 = Blanket purchase
	• 7 = Consulting services
	• 8 = Insurance
	• 9 = Rent
	• 10 = Subscription
	• 11 = Microsoft Business and Services Agreement
	• 12 = Microsoft Select License Agreement
	• 13 = Microsoft Select Plus Agreement
	• 14 = Microsoft Select License Enrollment
	• 15 = Microsoft Select Plus Affiliate
	• 16 = Microsoft Enterprise Agreement
	• 17 = Microsoft Enterprise Subscription Agreement

Database Column	Details
ContractType_en	Type: text (max 1000 characters)
	Contract Type of the Contract in English.
ContractType_de	<i>Type</i> : text (max 1000 characters)
	Contract Type of the Contract in German.
ContractType_fr	<i>Type</i> : text (max 1000 characters)
	Contract Type of the Contract in French.
ContractType_ja	<i>Type</i> : text (max 1000 characters)
	Contract Type of the Contract in Japanese.
ContractType_es	<i>Type</i> : text (max 1000 characters)
	Contract Type of the Contract in Spanish.

Contract_DIM Table

Contract_DIM is a dimension table storing contracts information.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 621: Database columns for Contract_DIM table

Database Column	Details
ContractID	<i>Type:</i> integer. Key
	Primary key to the contract.
ContractNo	<i>Type:</i> text (max 30 characters)
	Contract No of the contract.
ContractName	<i>Type:</i> text (max 50 characters)
	Contract Name of the contract.
VendorName	<i>Type:</i> text (max 64 characters). Nullable
	Vendor Name of the contract.
IsEvergreen	<i>Type:</i> boolean
	If the contract never expires of the contract.
StartDate	<i>Type:</i> datetime. Nullable
	Start date of the contract.

Database Column	Details
ExpiryDate	<i>Type:</i> datetime. Nullable Expiry date of the contract.
ReviewDate	<i>Type:</i> datetime. Nullable Review date of the contract.
RenewalDate	<i>Type:</i> datetime. Nullable Renewal date of the contract.
IsLinkedToLicense	<i>Type:</i> boolean If the contract is linked to a license.

Contract_FACT Table

Contract_FACT is a fact table storing contracts information per ComplianceOperator.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 622: Database columns for Contract_FACT table

Database Column	Details
ComplianceOperatorID	
	Foreign key to the operator.
ContractID	<i>Type:</i> integer. Key
	Foreign key of the contract.
ContractTypeID	<i>Type:</i> integer
	Contract type ID of the contract.
ContractStatusID	<i>Type:</i> integer. Nullable
	Contract status ID of the contract.
CurrencyID	<i>Type:</i> integer
	Currency ID (total value id) of the contract.
GlobalAmount	<i>Type:</i> currency. Nullable
	Global amount (total value) of the contract.

CurrencyCurrentConversion_FACT Table

CurrencyCurrentConversion_FACT is a fact table storing current currency conversion rate.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 623: Database columns for CurrencyCurrentConversion_FACT table

Database Column	Details
FromCurrencyID	<i>Type</i> : integer. Key Foreign key to the Currency.
ToCurrencyID	<i>Type:</i> integer. Key Currency to convert to. Foreign key to the Currency.
ExchangeRate	<i>Type</i> : decimal Current exchange rate.

Currency_DIM Table

Currency_DIM is a dimension table storing latest currency exchange rates.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 624: Database columns for Currency_DIM table

Database Column	Details
CurrencyID	<i>Type</i> : integer. Key Primary key of the currency.
CurrencyCode	<i>Type:</i> text (max 32 characters). Key Code assigned to the currency.
LongPrefix	<i>Type:</i> text (max 32 characters) Long prefix to display in front of the money value.
LongSuffix	<i>Type:</i> text (max 32 characters) Long suffix to display after the money value.

Database Column	Details
LongFormat	<i>Type</i> : text (max 80 characters)
	Long format of the currency.
ShortPrefix	<i>Type</i> : text (max 32 characters)
	Short prefix to display in front of the money value.
ShortSuffix	Type: text (max 32 characters)
	Short suffix to display after the money value.
ShortFormat	<i>Type</i> : text (max 80 characters)
	Short format of the currency.
Currency_en	<i>Type</i> : text (max 1000 characters)
	Currency name in English.
Currency_de	<i>Type</i> : text (max 1000 characters)
	Currency name in German.
Currency_fr	<i>Type</i> : text (max 1000 characters)
	Currency name in French.
Currency_ja	<i>Type</i> : text (max 1000 characters)
	Currency name in Japanese.

DiscoveredDevices_Activity_FACT Table

DiscoveredDevices_FACT is a table containing devices discovered in the last 90 days but have no inventory.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 625: Database columns for DiscoveredDevices_Activity_FACT table

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key Foreign key to the operator.
AgeInDay	<i>Type:</i> integer. Key The days relative to date when the table is last updated.
ActivityDate	<i>Type:</i> datetime The date the activity occurred.

Database Column	Details
MissingInventoryCount	<i>Type:</i> big integer
	Number of discovered devices on this date that are missing inventory.

Installation_Activity_FACT Table

Installation_Activity_FACT is a fact table storing application installations that have been discovered in the last 90 days. Row count : 90 (days) * combination of ActionStatusID and ClassificationID rows.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 626: Database columns for Installation_Activity_FACT table

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key
	Foreign key to the operator.
AgeInDay	<i>Type:</i> integer. Key
	The days relative to date when the table is last updated.
ActionStatusID	<i>Type:</i> integer. Key
	Action status ID of the application.
ClassificationID	<i>Type:</i> integer. Key
	Classification ID of the application.
ActivityDate	<i>Type:</i> datetime
	The date the activity occurred.
InstallCount	<i>Type:</i> big integer
	Number of installations on this date.

Inventory_DuplicateHostName_FACT Table

Inventory_DuplicateHostName_FACT is a fact table storing duplicate host name and its duplicate count.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key Foreign key to the operator.
HostName	<i>Type:</i> text (max 256 characters). Key Host name.
DuplicateCount	<i>Type</i> : integer Duplicate count.

Table 627: Database columns for Inventory_DuplicateHostName_FACT table

Inventory_DuplicateSerialNumber_FACT Table

Inventory_DuplicateSerialNumber_FACT is a fact table storing duplicate serial number and its duplicate count.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 628: Database columns for Inventory_DuplicateSerialNumber_FACT table

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key Foreign key to the operator.
SerialNo	<i>Type:</i> text (max 100 characters). Key Serial number.
DuplicateCount	<i>Type:</i> integer Duplicate count.

Inventory_VirtualizationType_FACT Table

Inventory_VirtualizationType_FACT is a fact table storing the number of virtual machines and Oracle Database servers by type.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key Foreign key to the operator.
VMTypeID	<i>Type:</i> integer. Key Foreign key to the VM type ID.
VMCount	<i>Type</i> : integer Number of virtual machines by type.
OracleDBCount	<i>Type</i> : integer Number of Oracle database servers by type.

Table 629: Database columns for Inventory_VirtualizationType_FACT table

LicenseComplianceStatus_CODE Table

LicenseComplianceStatus_CODE is an enumerated code table for compliance status for a license.

Table 630: Database columns for	LicenseComplianceStatus	CODE table

Database Column	Details
ComplianceStatusID	<i>Type</i> : integer. Key A unique identifier for license compliance status. Possible values and the corresponding default strings are:
	• 1 = Compliant
	• 2 = In Breach
	• 3 = Unknown
	• 4 = Not Tracked.
ComplianceStatus_en	<i>Type:</i> text (max 1000 characters)
	Compliance status of the license in English.
ComplianceStatus_de	<i>Type:</i> text (max 1000 characters)
	Compliance status of the license in German.
ComplianceStatus_fr	<i>Type:</i> text (max 1000 characters)
	Compliance status of the license in French.
ComplianceStatus_ja	<i>Type:</i> text (max 1000 characters)
	Compliance status of the license in Japanese.

Database Column	Details
ComplianceStatus_es	<i>Type:</i> text (max 1000 characters). Nullable
	Compliance status of the license in Spanish.

LicenseType_CODE Table

LicenseType_CODE is an enumerated code table for software license types.

Table 631: Database columns for LicenseType_CODE table

Database Column	Details
LicenseTypeID	<i>Type</i> : integer. Key
	A unique identifier for license type. Possible values and the corresponding default strings are:
	• 1 = Enterprise
	• 2 = Device
	• 3 = Node-Locked
	• 4 = User
	• 5 = Concurrent User
	• 6 = Appliance
	• 7 = Client Server
	• 8 = OEM
	• 9 = Evaluation
	• 10 = Run-Time
	• 11 = Device (Processor-Limited)
	• 12 = Site
	• 13 = Named User
	• 14 = Device (Core-Limited)
	• 15 = Core Points
	• 16 = Oracle Processor
	• 17 = Oracle Named User Plus
	• 18 = Processor Points
	• 19 = Oracle Legacy
	• 20 = Enterprise Agreement
	• 21 = SAP Named User
	• 22 = Microsoft Server Processor
	• 23 = CAL Legacy
	• 24 = Tiered Device
	• 25 = IBM Processor Value Unit
	• 26 = IBM Authorized User

Database Column	Details
	• 27 = IBM Concurrent User
	• 28 = IBM Floating User
	• 29 = Custom Metric
	• 30 = Processor
	• 31 = IBM Resource Value Unit
	• 32 = IBM User Value Unit
	• 33 = Microsoft Server Core
	• 34 = Oracle User
	• 35 = SAP Package
	• 36 = Microsoft SCCM Client Device
	• 37 = Microsoft SCCM Client User
	• 38 = Microsoft Developer Network
	• 39 = Microsoft Device CAL
	• 40 = Microsoft User CAL
LicenseType_en	<i>Type:</i> text (max 1000 characters)
	License type of the license in English.
LicenseType_de	<i>Type:</i> text (max 1000 characters)
	License type of the license in German.
LicenseType_fr	<i>Type:</i> text (max 1000 characters)
	License type of the license in French.
LicenseType_ja	<i>Type:</i> text (max 1000 characters)
	License type of the license in Japanese.
LicenseType_es	<i>Type:</i> text (max 1000 characters). Nullable
	License type of the license in Spanish.

License_DIM Table

License_DIM is a dimension table storing software licenses.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 632: Databas	e columns for	License	DIM table
--------------------	---------------	---------	-----------

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key
	Primary key of the license.
LicenseName	<i>Type</i> : text (max 256 characters). Key
	Name of the license.
ProductName	<i>Type</i> : text (max 256 characters). Key
	Product name of the primary application.
PublisherName	<i>Type</i> : text (max 256 characters). Key
	Publisher of the primary application.
EditionName	<i>Type:</i> text (max 60 characters)
	Edition of the license.
VersionName	<i>Type:</i> text (max 60 characters)
	Version of the license.
LicenseTypeID	<i>Type:</i> integer. Key
	License type ID of the license.
ClassificationID	<i>Type:</i> integer. Key
	Classification ID of the primary application.
ActionStatusID	<i>Type:</i> integer. Key
	Action status ID of the primary application.
IsBundle	<i>Type:</i> boolean
	Whether this license is a bundle license (contain multiple primary applications).

License_Position_FACT Table

License_Position_FACT is a fact table storing license positions by operator.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 633: Database columns for License_Position_FACT table

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key
	Foreign key to the operator.
SoftwareLicenseID	<i>Type:</i> integer. Key
	Foreign key to the license.
Entitlements	<i>Type:</i> big integer
	Total number of entitlements.
Consumption	<i>Type:</i> big integer
	Number of entitlements consumed.
Installs	<i>Type:</i> big integer
	Number of installations.
ComplianceStatusID	<i>Type:</i> integer
	Compliance status ID of the license.
RiskCount	<i>Type:</i> big integer
	Number of entitlements at risk (aka in breach).
OriginalCurrencyID	<i>Type:</i> integer
	Currency ID of the OriginalCurrencyRiskAmount.
OriginalCurrencyUnitPrice	<i>Type:</i> decimal
	Unit price in original currency.
OriginalCurrencyRisk	<i>Type:</i> decimal
Amount	Value at risk in original currency.
SystemCurrencyID	<i>Type:</i> integer
	Currency ID of the SystemCurrencyRiskAmount.
SystemCurrencyUnitPrice	<i>Type:</i> decimal
	Unit price in system currency.
SystemCurrencyRiskAmount	<i>Type:</i> decimal
	Value at risk in system currency.
RiskPercent	<i>Type:</i> decimal
	Percentage at risk.
UtilizationPercent	<i>Type:</i> decimal. Nullable
	Percentage utilization.

PurchaseStatus_CODE Table

PurchaseStatus CODE is a dimension table storing purchase status information.

Table 634: Database columns for PurchaseStatus_CODE table

Database Column	Details
PurchaseStatusID	<i>Type:</i> integer. Key A unique identifier for Purchase status. Possible values and the corresponding default strings are:
	• 1 = New
	 2 = Pending 2 = Considered
	 3 = Completed
	• 4 = Cancelled
PurchaseStatus_en	Type: text (max 1000 characters)
	Purchase status of the license in English.
PurchaseStatus_de	<i>Type:</i> text (max 1000 characters)
	Purchase status of the license in German.
PurchaseStatus_fr	<i>Type:</i> text (max 1000 characters)
	Purchase status of the license in French.
PurchaseStatus_ja	<i>Type:</i> text (max 1000 characters)
	Purchase status of the license in Japanese.
PurchaseStatus_es	<i>Type:</i> text (max 1000 characters)
	Purchase status of the license in Spanish.

PurchaseType_CODE Table

PurchaseType CODE is a dimension table storing purchase type information.

Table 635: Database columns for PurchaseType_CODE table

Database Column	Details
PurchaseTypeID	<i>Type</i> : integer. Key A unique identifier for purchase order detail type. Possible values and the
	corresponding default strings are:
	• 1 = NotSet
	• 2 = Software
	• 3 = Hardware
	• 4 = Service
	• 5 = Other
	• 6 = Software Upgrade
	 7 = Software Maintenance
	• 8 = DiskKit
	• 9 = Hardware Maintenance
	• 10 = Software Baseline
	• 11 = Software Subscription
PurchaseType_en	<i>Type:</i> text (max 1000 characters)
	Purchase Type of the purchase in English.
PurchaseType_de	<i>Type:</i> text (max 1000 characters)
	Purchase Type of the purchase in German.
PurchaseType_fr	<i>Type:</i> text (max 1000 characters) Purchase Type of the purchase in French.
PurchaseType_ja	Type: text (max 1000 characters)
. a. chaserype_ja	Purchase Type of the purchase in Japanese.
PurchaseType_es	<i>Type:</i> text (max 1000 characters)
	Purchase Type of the purchase in Spanish.

Purchase_DIM Table

Purchase_DIM is a dimension table storing all purchase information.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 636: Database columns for Purchase_DIM table

Database Column	Details
PurchaseOrderDetailID	<i>Type:</i> integer. Key
	Foreign key of the purchaseorder.
PurchaseNo	<i>Type</i> : text (max 50 characters). Nullable
	Purchase No of the purchase.
PurchaseDescription	<i>Type</i> : text (max 250 characters)
	Purchase Description of the purchase.
EffectiveQuantity	<i>Type:</i> integer. Nullable
	Effective Quantity of the purchase.
PurchaseDate	<i>Type</i> : datetime
	Purchase date of the purchase.
CreationDate	<i>Type</i> : datetime
	Creation date of the purchase.
PublisherName	<i>Type</i> : text (max 64 characters). Nullable
	Publisher name of the purchase.
VendorName	<i>Type</i> : text (max 64 characters). Nullable
	Vendor name of the purchase.

Purchase_Latest_FACT Table

Purchase_Latest_FACT is a fact table storing latest purchase information per ComplianceOperator.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 637: Database columns for Purchase_Latest_FACT table

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key Foreign key to the operator.

Database Column	Details
PurchaseOrderDetailID	<i>Type:</i> integer. Key
	Foreign key of the purchaseorder.
PurchaseTypeID	<i>Type:</i> integer
	Purchase type ID of the purchase.
PurchaseStatusID	<i>Type:</i> integer
	Purchase status ID of the purchase.
CurrencyID	<i>Type:</i> integer
	Currency ID (total price id) of the purchase.
TotalPrice	<i>Type:</i> currency. Nullable
	Total price of the purchase.

Purchase_Spend_FACT Table

Purchase_Spend_FACT is a fact table storing all purchase information per ComplianceOperator.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 638: Database columns for Purchase_Spend_FACT table

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key
	Foreign key to the operator.
PurchaseOrderDetailID	<i>Type:</i> integer. Key
	Foreign key of the purchaseorder.
PurchaseTypeID	<i>Type:</i> integer
	Purchase type ID of the purchase.
CurrencyID	<i>Type:</i> integer
	Currency ID (total price id) of the purchase.
TotalPrice	<i>Type:</i> currency. Nullable
	Total price of the purchase.

Purchase_Unprocessed_FACT Table

Purchase_Unprocessed_FACT is a fact table storing unprocessed purchase information per ComplianceOperator.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 639: Database columns for Purchase_Unprocessed_FACT table

Database Column	Details
ComplianceOperatorID	<i>Type:</i> integer. Key Foreign key to the operator.
PurchaseOrderDetailID	<i>Type:</i> integer. Key Foreign key of the purchaseorder.
AvailableEntitlements	<i>Type:</i> integer Available Entitlements of the purchase.

ResourceString_CODE Table

ResourceString_CODE is a lookup table for localized text.

Table 640: Database columns for ResourceString_CODE table

Database Column	Details
ResourceKey	<i>Type:</i> text (max 256 characters). Key Primary key of the resource string.
ResourceString_en	<i>Type:</i> text (max 1000 characters) Resource string in English.
ResourceString_de	<i>Type:</i> text (max 1000 characters) Resource string in German.
ResourceString_fr	<i>Type:</i> text (max 1000 characters) Resource string in French.
ResourceString_ja	<i>Type:</i> text (max 1000 characters) Resource string in Japanese.

Database Column	Details
ResourceString_es	<i>Type:</i> text (max 1000 characters). Nullable Resource string in Spanish.

VMType_CODE Table

VMType_CODE is an enumerated code table for VM type.

Table 641: Database columns for VMType_CODE table

Database Column	Details
VMTypeID	<i>Type:</i> integer. Key
	A unique identifier for VM type. Possible values and the corresponding default strings are:
	• 1 = VMware
	• 2 = Hyper-V
	• 3 = LPAR
	• 4 = WPAR
	• 5 = nPar
	• 6 = vPar
	• 7 = SRP
	• 8 = Zone
	• 9 = Unknown.
	• 10 = Oracle VM
VMType_en	<i>Type</i> : text (max 1000 characters)
	VM type in English.
VMType_de	<i>Type:</i> text (max 1000 characters)
	VM type in German.
VMType_fr	<i>Type:</i> text (max 1000 characters)
	VM type in French.
VMType_ja	<i>Type</i> : text (max 1000 characters)
	VM type in Japanese.
VMType_es	<i>Type:</i> text (max 1000 characters). Nullable
	VM type in Spanish.

4

DataWarehouse Database Schema

This chapter describes a schema for the dimensional data model available for reporting using the Flexera Analytics (powered by Cognos).

There are three separate data models related to IBM Cognos within FlexNet Manager Suite:

- A model for use when customizing dashboards for FlexNet Manager Suite (see Dashboard Tables)
- An operational model for reporting on live data (this model is not separately documented)
- The dimensional data model for reporting on data that changes over time, which is the subject of this chapter.

DataWarehouseTables Tables

The complete set of database tables documented here includes:

- AssignmentData table (see AssignmentData Table)
- CategoryData table (see CategoryData Table)
- ConsumptionData table (see ConsumptionData Table)
- CorporateUnitData table (see CorporateUnitData Table)
- CostCenterData table (see CostCenterData Table)
- DataWarehouseSetting table (see DataWarehouseSetting Table)
- InstallationData table (see InstallationData Table)
- LocationData table (see LocationData Table)
- PurchaseData table (see PurchaseData Table)
- PurchaseDateData table (see PurchaseDateData Table)
- SnapshotData table (see SnapshotData Table)
- SoftwareLicenseData table (see SoftwareLicenseData Table)

- SoftwareTitleData table (see SoftwareTitleData Table)
- VendorData table (see VendorData Table)
- VendorPurchaseData table (see VendorPurchaseData Table)

AssignmentData Table

Stores all assignment information required by the external Consumption Fact.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 642: Database columns for AssignmentData table

Database Column	Details
AssignmentDataID	<i>Type:</i> integer. Generated ID
	A unique identifier for this assignment.
SnapshotID	<i>Type:</i> integer. Key
	The snapshot to which this assignment data pertains. Reference to the snapshot dimension.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license to which this assignment data pertains. Reference to the software license dimension.
LocationID	<i>Type:</i> integer. Key
	The location where the assignments were made.
CorporateUnitID	<i>Type:</i> integer. Key
	The corporate unit where the assignments were made.
CostCenterID	<i>Type:</i> integer. Key
	The cost center where the assignments were made.
CategoryID	<i>Type:</i> integer. Key
	The category which classifies this license assignment.
AssignedCount	<i>Type</i> : integer
	The number of licenses that have been assigned or the number of licenses that have been consumed as a result of group assignment.

CategoryData Table

This table stores each of the categories known to FNMP. This maps directly to the External Category Dimension.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
CategoryID	<i>Type:</i> integer. Key
	Unique identifier for this category from the FNMP database.
GroupExID	<i>Type:</i> text (max 128 characters)
	Internal identifier for this category.
Level1	<i>Type:</i> integer
	Parsed GroupExID, first level
Level1Name	<i>Type:</i> text (max 500 characters)
	Parsed Path, first level
Level2	<i>Type:</i> integer. Nullable
	Parsed GroupExID, second level
Level2Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, second level
Level3	<i>Type:</i> integer. Nullable
	Parsed GroupExID, third level
Level3Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, third level
Level4	<i>Type:</i> integer. Nullable
	Parsed GroupExID, fourth level
Level4Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, fourth level
Level5	<i>Type:</i> integer. Nullable
	Parsed GroupExID, fifth level
Level5Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, fifth level

Table 643: Database columns for CategoryData table

Database Column	Details
Level6	<i>Type:</i> integer. Nullable
	Parsed GroupExID, sixth level
Level6Name	Type: text (max 500 characters). Nullable
	Parsed Path, sixth level
Level7	<i>Type:</i> integer. Nullable
	Parsed GroupExID, seventh level
Level7Name	Type: text (max 500 characters). Nullable
	Parsed Path, seventh level
Level8	<i>Type:</i> integer. Nullable
	Parsed GroupExID, eighth level
Level8Name	Type: text (max 500 characters). Nullable
	Parsed Path, eighth level
Level9	<i>Type:</i> integer. Nullable
	Parsed GroupExID, ninth level
Level9Name	Type: text (max 500 characters). Nullable
	Parsed Path, ninth level
Level10	<i>Type:</i> integer. Nullable
	Parsed GroupExID, tenth level
Level10Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, tenth level
CategoryPath	<i>Type:</i> text (max 500 characters)
	The full path to this category.
CategoryName	<i>Type:</i> text (max 256 characters)
	The full name of this category.

ConsumptionData Table

Stores all consumption information required by the external Consumption Fact.

Table 644: Database columns for ConsumptionData table

Database Column	Details
ConsumptionDataID	<i>Type:</i> integer. Generated ID
	A unique identifier for this consumption data.
SnapshotID	<i>Type:</i> integer. Key
	The snapshot to which this consumption data pertains. Reference to the snapshot dimension.
SoftwareLicenseID	<i>Type:</i> integer. Key
	The license to which this consumption data pertains. Reference to the software license dimension.
LocationID	<i>Type:</i> integer. Key
	The location which has consumed this license.
CorporateUnitID	<i>Type:</i> integer. Key
	The corporate unit which has consumed this license.
CostCenterID	<i>Type:</i> integer. Key
	The cost center which has consumed this license.
CategoryID	<i>Type:</i> integer. Key
	The category which classifies this license consumption.
InstalledCount	<i>Type:</i> integer. Nullable
	Number of installed software records, linked to the license. It is not a number of application installations.
ConsumedCount	<i>Type:</i> integer
	The number of licenses consumed.
UsedCount	<i>Type:</i> integer
	The number of license consumptions that were used.
SecondUseCount	<i>Type:</i> integer
	The number of installations which are not consuming a license as a result of second use rights.
DowngradeCount	<i>Type:</i> integer
	The number of licenses consumed which are a result of downgrade rights.
VirtualEnvironmentCount	<i>Type:</i> integer
	The number of installations which are not consuming a license as a result of virtual machine product use rights.

Database Column	Details
VMNonConsumedCount	<i>Type:</i> integer. Nullable Count that is not consumed because of VM second use rights.
ExemptCount	<i>Type</i> : integer The number of installations which are exempt from consuming a license.
LicensedCores	<i>Type</i> : integer. Nullable The number of processor cores that are covered by a license.

CorporateUnitData Table

This table will store each of the corporate units known to FNMP. This will map directly to the External Corporate Unit Dimension.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 645: Database columns for CorporateUnitData table

Database Column	Details
CorporateUnitID	<i>Type:</i> integer. Key
	Unique identifier for this corporate unit from the FNMP database.
GroupExID	<i>Type</i> : text (max 128 characters)
	Internal identifier for this corporate unit.
Level1	<i>Type:</i> integer
	Parsed GroupExID, first level
Level1Name	<i>Type</i> : text (max 500 characters)
	Parsed Path, first level
Level2	<i>Type:</i> integer. Nullable
	Parsed GroupExID, second level
Level2Name	<i>Type</i> : text (max 500 characters). Nullable
	Parsed Path, second level
Level3	<i>Type:</i> integer. Nullable
	Parsed GroupExID, third level
Level3Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, third level

Database Column	Details
Level4	<i>Type:</i> integer. Nullable
	Parsed GroupExID, fourth level
Level4Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, fourth level
Level5	<i>Type</i> : integer. Nullable
	Parsed GroupExID, fifth level
Level5Name	Type: text (max 500 characters). Nullable
	Parsed Path, fifth level
Level6	<i>Type</i> : integer. Nullable
	Parsed GroupExID, sixth level
Level6Name	Type: text (max 500 characters). Nullable
	Parsed Path, sixth level
Level7	<i>Type</i> : integer. Nullable
	Parsed GroupExID, seventh level
Level7Name	Type: text (max 500 characters). Nullable
	Parsed Path, seventh level
Level8	<i>Type</i> : integer. Nullable
	Parsed GroupExID, eighth level
Level8Name	<i>Type</i> : text (max 500 characters). Nullable
	Parsed Path, eighth level
Level9	<i>Type</i> : integer. Nullable
	Parsed GroupExID, ninth level
Level9Name	<i>Type</i> : text (max 500 characters). Nullable
	Parsed Path, ninth level
Level10	<i>Type</i> : integer. Nullable
	Parsed GroupExID, tenth level
Level10Name	<i>Type</i> : text (max 500 characters). Nullable
	Parsed Path, tenth level
CorporateUnitPath	<i>Type</i> : text (max 500 characters)
	The full path to this corporate unit.
CorporateUnitName	<i>Type</i> : text (max 256 characters)
	The name of this corporate unit.

CostCenterData Table

This table stores each of the cost centers known to FNMP. This will map directly to the External Cost Center Dimension.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
CostCenterID	<i>Type:</i> integer. Key
	Unique identifier fro this cost center from the FNMP database.
GroupExID	<i>Type</i> : text (max 128 characters)
	Internal identifier for this cost center.
Level1	<i>Type:</i> integer
	Parsed GroupExID, first level
Level1Name	<i>Type:</i> text (max 500 characters)
	Parsed Path, first level
Level2	<i>Type:</i> integer. Nullable
	Parsed GroupExID, second level
Level2Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, second level
Level3	<i>Type:</i> integer. Nullable
	Parsed GroupExID, third level
Level3Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, third level
Level4	<i>Type:</i> integer. Nullable
	Parsed GroupExID, fourth level
Level4Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, fourth level
Level5	<i>Type:</i> integer. Nullable
	Parsed GroupExID, fifth level
Level5Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, fifth level

 Table 646:
 Database columns for CostCenterData table

Database Column	Details
Level6	<i>Type</i> : integer. Nullable
	Parsed GroupExID, sixth level
Level6Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, sixth level
Level7	<i>Type:</i> integer. Nullable
	Parsed GroupExID, seventh level
Level7Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, seventh level
Level8	<i>Type:</i> integer. Nullable
	Parsed GroupExID, eighth level
Level8Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, eighth level
Level9	Type: integer. Nullable
	Parsed GroupExID, ninth level
Level9Name	<i>Type</i> : text (max 500 characters). Nullable
	Parsed Path, ninth level
Level10	Type: integer. Nullable
	Parsed GroupExID, tenth level
Level10Name	Type: text (max 500 characters). Nullable
	Parsed Path, tenth level
CostCenterPath	<i>Type</i> : text (max 500 characters)
	The full path to this cost center.
CostCenterName	<i>Type:</i> text (max 256 characters)
	The name of this cost center.

DataWarehouseSetting Table

Stores settings for data warehouse: currency, currency symbol

Table 647: Database columns for DataWarehouseSetting table

Database Column	Details
DataWarehouseSettingID	<i>Type:</i> integer. Key. Generated ID A unique identifier for this assignment.
ComplianceOperatorID	<i>Type:</i> integer. Key. Nullable For future use
CurrencyName	<i>Type:</i> text (max 128 characters) Currency name
CurrencySymbol	<i>Type</i> : text (max 128 characters) Currency symbol

InstallationData Table

Stores all of the installation information. Installation records are scoped as per the scoping rules in FNMP.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 648: Database columns for InstallationData table

Database Column	Details
InstallationDataID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for this installation data.
SnapshotID	<i>Type:</i> integer. Key
	The snapshot to which this installation data pertains. Reference to the snapshot dimension.
SoftwareTitleID	<i>Type:</i> integer. Key
	The software title that is installed. Reference to the software title dimension.
LocationID	<i>Type:</i> integer. Key
	The location where these installs occurred.
CorporateUnitID	<i>Type:</i> integer. Key
	The corporate unit where these installs occurred.
CostCenterID	<i>Type:</i> integer. Key
	The cost center where these installs occurred.

Database Column	Details
CategoryID	<i>Type:</i> integer. Key
	The category that classifies these installs.
InstalledCount	<i>Type:</i> integer. Key
	The number of installs.
LicensableInstalledCount	<i>Type:</i> integer
	The number of licensable installs.
LicensedCount	<i>Type:</i> integer
	The number of installs which are covered by a license.
UsedCount	<i>Type:</i> integer. Key
	The number of installations which have usage exceeding the defined levels for the installation to be deemed used.
VirtualEnvironmentCount	<i>Type:</i> integer
	The number of installs which are on virtual machines.

LocationData Table

This table will store each of the locations known to FNMP. This will map directly to the External Location Dimension.

Database Column	Details
LocationID	<i>Type:</i> integer. Key Unique identifier for this location from the FNMP database.
GroupExID	<i>Type:</i> text (max 128 characters) Internal identifier for this location.
Level1	<i>Type</i> : integer Parsed GroupExID, first level
Level1Name	<i>Type:</i> text (max 500 characters) Parsed Path, first level

Database Column	Details
Level2	<i>Type</i> : integer. Nullable
	Parsed GroupExID, second level
Level2Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, second level
Level3	<i>Type</i> : integer. Nullable
	Parsed GroupExID, third level
Level3Name	<i>Type</i> : text (max 500 characters). Nullable
	Parsed Path, third level
Level4	<i>Type</i> : integer. Nullable
	Parsed GroupExID, fourth level
Level4Name	<i>Type</i> : text (max 500 characters). Nullable
	Parsed Path, fourth level
Level5	<i>Type</i> : integer. Nullable
	Parsed GroupExID, fifth level
Level5Name	Type: text (max 500 characters). Nullable
	Parsed Path, fifth level
Level6	<i>Type:</i> integer. Nullable
	Parsed GroupExID, sixth level
Level6Name	Type: text (max 500 characters). Nullable
	Parsed Path, sixth level
Level7	<i>Type</i> : integer. Nullable
	Parsed GroupExID, seventh level
Level7Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, seventh level
Level8	<i>Type:</i> integer. Nullable
	Parsed GroupExID, eighth level
Level8Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, eighth level
Level9	<i>Type:</i> integer. Nullable
	Parsed GroupExID, ninth level
Level9Name	<i>Type:</i> text (max 500 characters). Nullable
	Parsed Path, ninth level

Database Column	Details
Level10	<i>Type</i> : integer. Nullable Parsed GroupExID, tenth level
Level10Name	<i>Type</i> : text (max 500 characters). Nullable Parsed Path, tenth level
LocationPath	<i>Type</i> : text (max 500 characters) The full path of this location.
LocationName	<i>Type:</i> text (max 256 characters) The name of this location.

PurchaseData Table

The Purchases table will store all purchase information that is required for the External Consumption Fact.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 650: Database columns for PurchaseData table

Database Column	Details
PurchasesDataID	<i>Type</i> : integer. Generated ID
	A unique identifier for this purchase information.
SnapshotID	<i>Type:</i> integer. Key
	The snapshot to which this purchase data pertains. Reference to the snapshot dimension.
SoftwareLicenseID	<i>Type</i> : integer. Key
	The license to which these purchases pertain. Reference to software license dimension.
LocationID	<i>Type</i> : integer. Key
	The location which has made these purchases.
CorporateUnitID	<i>Type:</i> integer. Key
	The corporate unit which has made these purchases.
CostCenterID	<i>Type:</i> integer. Key
	The cost center which has made these purchases.

Database Column	Details
CategoryID	<i>Type</i> : integer. Key The category which classifies this license purchases.
PurchasedCount	<i>Type</i> : integer. Nullable The number of license entitlements purchased.
PurchasedCost	<i>Type:</i> currency. Nullable The purchase cost for these license entitlements.
LastPurchaseDate	<i>Type:</i> datetime. Nullable The last date on which a purchase of entitlements for this license was made.

PurchaseDateData Table

This table stores purchase dates known to FNMP. This maps directly to the External Purchase Date Dimension. This is not a slowly changing dimension, but a snapshot of current and deleted purchase order dates.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 651: Database columns for PurchaseDateData table

Database Column	Details
PurchaseDateID	<i>Type:</i> integer. Key. Generated ID Unique identifier for this purchase date.
Month	<i>Type:</i> integer. Key The month for this purchase date.
Year	<i>Type:</i> integer. Key The year for this purchase date.

SnapshotData Table

Stores information to uniquely identify each individual snapshot. Whilst the scheduled snapshot generation will only happen on a daily or weekly basis, there is no restriction that multiple snapshots on the same day could not be generated.

Database Column	Details
SnapshotID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a snapshot.
SnapshotYear	<i>Type:</i> integer. Key The year in which the snapshot was created.
SnapshotMonth	<i>Type:</i> integer. Key The month in which the snapshot was created.
SnapshotDay	<i>Type:</i> integer. Key The day on which the snapshot was created.
SnapshotDate	<i>Type:</i> datetime The date and time the snapshot was created or last updated.
SnapshotDescription	<i>Type:</i> text (max 500 characters) A description of this snapshot.

Table 652: Database columns for SnapshotData table

SoftwareLicenseData Table

This table stores each of the Software Licenses known to FNMP. This maps directly to the External Software License Dimension. This is not a slowly changing dimension, but a snapshot of current and deleted license information. If license properties change from one snapshot to the next, the information in this table will be updated.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 653: Database columns for SoftwareLicenseData table

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer. Key Unique identifier for this license from the FNMP database.
ProductName	<i>Type:</i> text (max 1024 characters) Product name of the primary application of this license.
PublisherName	<i>Type:</i> text (max 64 characters). Nullable The name of the publisher

Database Column	Details
LicenseName	<i>Type</i> : text (max 256 characters)
	The name of this license.
LicenseVersion	<i>Type:</i> text (max 60 characters). Nullable
	The version of this license.
LicenseEdition	<i>Type</i> : text (max 60 characters). Nullable
	The edition of this license.
LicenseTypeID	<i>Type:</i> integer
	ID of the type of this license.
LicenseType	<i>Type</i> : text (max 256 characters)
	The type of this license.
GrantsSecondUse	<i>Type</i> : boolean
	Whether this license offers second use rights.
GrantsDowngrade	<i>Type</i> : boolean
	Whether this license offers downgrade rights.
IsTrueUp	<i>Type</i> : boolean
	Whether this license provides True Up functionality.
UnlimitedConsumption	<i>Type:</i> boolean
	Whether this license provides unlimited consumption.
EstimatedUnitPrice	<i>Type:</i> currency. Nullable
	Estimated Unit price for the license
GrantsVirtualEnvironment	<i>Type:</i> boolean
	Whether installs of this license on a virtual machine host covers installations on virtual machines hosted by that host.
UseInSecondUseRights	<i>Type:</i> boolean
	A Boolean field that states whether product use rights apply to this license type.
NumberPurchased	<i>Type:</i> integer
	The quantity of purchased license entitlements.
LocationID	<i>Type:</i> integer. Key
	The location which owns this license.
CorporateUnitID	<i>Type:</i> integer. Key
	The corporate unit which owns this license.

Database Column	Details
CostCenterID	<i>Type:</i> integer. Key
	The cost center which owns this license.
CategoryID	<i>Type:</i> integer. Key
	The category of this license.
LicenseStatusID	<i>Type:</i> integer
	ID of the status of this license
LicenseStatus	<i>Type:</i> text (max 256 characters)
	License Status of the license
ComplianceStatusID	<i>Type:</i> integer
	ID of the compliance status of this license
ComplianceStatus	<i>Type:</i> text (max 256 characters)
	Compliance Status of the license
DurationID	<i>Type:</i> integer
	ID of duration of this license
Duration	<i>Type:</i> text (max 256 characters)
	The name of the resource string containing the text to display on the user interface.
ExpiryDate	<i>Type:</i> datetime. Nullable
	The date this license expires. A NULL value means the license does not expire.

SoftwareTitleData Table

This table stores each of the software titles known to FNMP. This maps directly to the External Software Title Dimension. This is not a slowly changing dimension, but a snapshot of current and deleted software titles. If title properties change from one snapshot to the next, the information in this table will be updated.

Database Column	Details
SoftwareTitleID	<i>Type</i> : integer. Key Unique identifier for this software title from the FNMP database.

Database Column	Details
SoftwareTitleName	<i>Type</i> : text (max 512 characters)
	The name of this software title.
PublisherName	<i>Type:</i> text (max 200 characters)
	The publisher of this software title.
ProductName	<i>Type:</i> text (max 1024 characters)
	The product represented by this software title.
VersionName	<i>Type</i> : text (max 50 characters)
	The version of this software title.
VersionWeight	<i>Type</i> : decimal. Nullable
	A numeric value used to sort various versions of a software title.
EditionName	<i>Type</i> : text (max 50 characters)
	The edition of this software title.
EditionWeight	<i>Type</i> : decimal. Nullable
	A numeric value used to sort various editions of a software title.
Classification	<i>Type</i> : text (max 50 characters)
	The classification of this software title.
ClassificationID	<i>Type</i> : integer. Nullable
	The ID of the classification of this software title.
Action	<i>Type:</i> text (max 50 characters)
	The action of this software title.
ActionID	<i>Type:</i> integer
	The ID of the action of this software title.
IsLicensed	<i>Type:</i> boolean
	1 if the SoftwareTitle is linked to any license
OperatorManageStateID	<i>Type:</i> integer
	The management responsibility for this software title. Part of the unique key for a software title in the FNMP database.

VendorData Table

This table stores each of the vendors known to FNMP. This maps directly to the External Vendor Dimension. This is not a slowly changing dimension, but a snapshot of current and deleted vendors. If vendor properties change from one snapshot to the next, the information in this table will be updated.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 655: Database columns for VendorData table

Database Column	Details
VendorID	<i>Type</i> : integer. Key Unique identifier for this vendor from the FNMP database.
VendorName	<i>Type</i> : text (max 64 characters) The name of this vendor.

VendorPurchaseData Table

Stores all of the vendor purchase information. Purchase records are scoped as per the scoping rules in FNMP.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 656: Database columns for VendorPurchaseData table

Database Column	Details
VendorPurchaseID	<i>Type:</i> integer. Generated ID
	Unique identifier for this vendor purchase.
VendorID	<i>Type:</i> integer. Key
	The vendor to which this purchase data pertains. Reference to the vendor dimension.
PurchaseDateID	<i>Type:</i> integer. Key
	The date to which this vendor purchase data pertains. Reference to the purchase date dimension.
LocationID	<i>Type:</i> integer. Key
	The location where these purchases occurred.
CorporateUnitID	<i>Type:</i> integer. Key
	The corporate unit where these purchases occurred.
CostCenterID	<i>Type:</i> integer. Key
	The cost center where these purchases occurred.

Database Column	Details
CategoryID	<i>Type</i> : integer. Key
	The category that classifies these purchases.
HardwareCost	<i>Type</i> : currency
	The cost of hardware purchased from this vendor on this date.
HardwareMaintenanceCost	<i>Type</i> : currency
	The cost of hardware maintenance purchased from this vendor on this date.
SoftwareCost	<i>Type</i> : currency
	The cost of software purchased from this vendor on this date.
SoftwareMaintenanceCost	<i>Type</i> : currency
	The cost of software maintenance purchased from this vendor on this date.
OtherCost	Type: currency
	The cost of other items purchased from this vendor on this date.

5

Compliance Reader Database Schema

This chapter describes the schema for the staging tables used by the importer (ComplianceReader.exe) in the process of importing data into the main FlexNet Manager Suite. Imports through these tables may come from many sources, including (but not limited to) the inventory data collected by the FlexNet inventory agent and rationalized in the inventory database (see Inventory Database Schema).

For each data source, data in these tables is over-written as each import.

Information Structure

The following information is provided about database tables. Items appear only when relevant to the database column, and are suppressed where they do not apply. Two of these items (shown bold) are columns in the following pages, and the remainder are displayed within the **Details**.

Item	Comment
Database Column	The name of the column in the SQL table.
Туре	The data type of the contents of the database column.
Size	For types that have a maximum capacity, the upper limit is provided in parentheses.
Кеу	The word "Key" appears when a column is a unique key field within the table. It is possible for several database columns to be part of the key, so that this indicator may appear for several columns in a table.
Generated ID	This indicates that a numeric ID is assigned by the database.
Nullable	If this indicator is present, the database column permits nulls.
Computed	This indicator appears for columns that are automatically computed by the database.

Item	Comment
Default	If a column has a default value declared in the schema, this is specified at the end of the first set of details for the column.
Details	Describes the data stored in the database column, including many of the indicators described above.

Compliance.InventoryReader.Logic Tables

The complete set of database tables documented here includes:

- ExpiredImportedComputer table (see ExpiredImportedComputer Table)
- ImportedARSLicense table (see ImportedARSLicense Table)
- ImportedAccessingDevice table (see ImportedAccessingDevice Table)
- ImportedAccessingUser table (see ImportedAccessingUser Table)
- ImportedActiveDirectoryComputer table (see ImportedActiveDirectoryComputer Table)
- ImportedActiveDirectoryDomain table (see ImportedActiveDirectoryDomain Table)
- ImportedActiveDirectoryExternalMember table (see ImportedActiveDirectoryExternalMember Table)
- ImportedActiveDirectoryGroup table (see ImportedActiveDirectoryGroup Table)
- ImportedActiveDirectoryMember table (see ImportedActiveDirectoryMember Table)
- ImportedActiveDirectoryUser table (see ImportedActiveDirectoryUser Table)
- ImportedActiveSyncDevice table (see ImportedActiveSyncDevice Table)
- ImportedAttributeMapping table (see ImportedAttributeMapping Table)
- ImportedClientAccessEvidence table (see ImportedClientAccessEvidence Table)
- ImportedClientAccessEvidenceMapping table (see ImportedClientAccessEvidenceMapping Table)
- ImportedClientAccessedAccessEvidence table (see ImportedClientAccessedAccessEvidence Table)
- ImportedClientAccessedAccessOccurrence table (see ImportedClientAccessedAccessOccurrence Table)
- ImportedCluster table (see ImportedCluster Table)
- ImportedClusterGroup table (see ImportedClusterGroup Table)
- ImportedClusterGroupMember table (see ImportedClusterGroupMember Table)
- ImportedClusterHostAffinityRule table (see ImportedClusterHostAffinityRule Table)
- ImportedClusterNode table (see ImportedClusterNode Table)
- ImportedComputer table (see ImportedComputer Table)

- ImportedComputerCustomProperty table (see ImportedComputerCustomProperty Table)
- ImportedComputerScriptResult table (see ImportedComputerScriptResult Table)
- ImportedCustomPropertyName table (see ImportedCustomPropertyName Table)
- ImportedDomain table (see ImportedDomain Table)
- ImportedEvidenceAttribute table (see ImportedEvidenceAttribute Table)
- ImportedFNMEAFeature table (see ImportedFNMEAFeature Table)
- ImportedFNMEAProduct table (see ImportedFNMEAProduct Table)
- ImportedFNMEAUsageStatus table (see ImportedFNMEAUsageStatus Table)
- ImportedFileEvidence table (see ImportedFileEvidence Table)
- ImportedFileEvidenceMapping table (see ImportedFileEvidenceMapping Table)
- ImportedGuidMapping table (see ImportedGuidMapping Table)
- ImportedILMTPVUCounts table (see ImportedILMTPVUCounts Table)
- ImportedILMTPVUCreatedLicenses table (see ImportedILMTPVUCreatedLicenses Table)
- ImportedILMTVMMapping table (see ImportedILMTVMMapping Table)
- ImportedInstalledFileEvidence table (see ImportedInstalledFileEvidence Table)
- ImportedInstalledFileEvidenceUsage table (see ImportedInstalledFileEvidenceUsage Table)
- ImportedInstalledInstallerEvidence table (see ImportedInstalledInstallerEvidence Table)
- ImportedInstalledInstallerEvidenceAttribute table (see ImportedInstalledInstallerEvidenceAttribute Table)
- ImportedInstalledInstallerEvidenceUsage table (see ImportedInstalledInstallerEvidenceUsage Table)
- ImportedInstalledWMIEvidence table (see ImportedInstalledWMIEvidence Table)
- ImportedInstallerEvidence table (see ImportedInstallerEvidence Table)
- ImportedInstallerEvidenceMapping table (see ImportedInstallerEvidenceMapping Table)
- ImportedInstallerEvidenceRepackageMapping table (see ImportedInstallerEvidenceRepackageMapping Table)
- ImportedInstance table (see ImportedInstance Table)
- ImportedInstanceUser table (see ImportedInstanceUser Table)
- ImportedMissingComputer table (see ImportedMissingComputer Table)
- ImportedMissingLicenseUser table (see ImportedMissingLicenseUser Table)
- ImportedMissingUser table (see ImportedMissingUser Table)
- ImportedPVUVirtualMachineLayer table (see ImportedPVUVirtualMachineLayer Table)
- ImportedProductCodeEvidenceMapping table (see ImportedProductCodeEvidenceMapping Table)

- ImportedRelatedInstalledInstallerEvidence table (see ImportedRelatedInstalledInstallerEvidence Table)
- ImportedRemoteApplication table (see ImportedRemoteApplication Table)
- ImportedRemoteApplicationAccess table (see ImportedRemoteApplicationAccess Table)
- ImportedRemoteApplicationInstallerData table (see ImportedRemoteApplicationInstallerData Table)
- ImportedRemoteApplicationServer table (see ImportedRemoteApplicationServer Table)
- ImportedRemoteServerFileEvidenceMapping table (see ImportedRemoteServerFileEvidenceMapping Table)
- ImportedRemoteUsage table (see ImportedRemoteUsage Table)
- ImportedRemoteUserToApplicationAccess table (see ImportedRemoteUserToApplicationAccess Table)
- ImportedSite table (see ImportedSite Table)
- ImportedSiteSubnet table (see ImportedSiteSubnet Table)
- ImportedSoftwareLicense table (see ImportedSoftwareLicense Table)
- ImportedSoftwareLicenseAllocation table (see ImportedSoftwareLicenseAllocation Table)
- ImportedSoftwareTitle table (see ImportedSoftwareTitle Table)
- ImportedSoftwareTitleAccessEvidence table (see ImportedSoftwareTitleAccessEvidence Table)
- ImportedSoftwareTitleLicense table (see ImportedSoftwareTitleLicense Table)
- ImportedStringMapping table (see ImportedStringMapping Table)
- ImportedStringMappingLatin1CS table (see ImportedStringMappingLatin1CS Table)

ExpiredImportedComputer Table

The ExpiredImportedComputer table holds all of the computers which have been retrieved from the source connections and are expired.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 657: Database columns for ExpiredImportedComputer table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
ExternalID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the computer.
ComputerName	<i>Type:</i> text (max 256 characters). Nullable
	The name of the computer. In Windows, this is the NetBIOS name of the
	local computer, as returned by GetComputerName(). For UNIX, it is the host
	name of the machine, as returned by gethostname(2).
Domain	<i>Type:</i> text (max 100 characters). Nullable
	The domain of the computer.
OperatingSystem	<i>Type:</i> text (max 128 characters). Nullable
	The operating system of the computer.
ServicePack	<i>Type:</i> text (max 128 characters). Nullable
	The service pack installed for the operating system.
NumberOfProcessors	<i>Type:</i> integer. Nullable
	The number of processors in the computer.
ProcessorType	<i>Type:</i> text (max 256 characters). Nullable
	The type of processor in the computer.
MaxClockSpeed	<i>Type:</i> integer. Nullable
	The maximum clock speed of the fastest processor in the computer.

Database Column	Details
NumberOfCores	<i>Type:</i> integer. Nullable
	The number of cores in the computer.
TotalMemory	<i>Type:</i> big integer. Nullable
	The total RAM in the computer, in bytes.
ChassisType	<i>Type</i> : text (max 128 characters). Nullable
	The type of case of the computer. The value must be a (case insensitive) exact match for one of the values shown. Note that some license types use this information to optimize the licensing position, particularly with desktop and laptop computers.
NumberOfHardDrives	<i>Type</i> : integer. Nullable
	The number of hard drives in the computer.
TotalDiskSpace	<i>Type:</i> big integer. Nullable
	The total size of all hard drives in the computer.
NumberOfNetworkCards	<i>Type:</i> integer. Nullable
	The number of network cards in the computer.
NumberOfDisplayAdapters	<i>Type</i> : integer. Nullable
	The number of graphics cards in the computer.
IPAddress	<i>Type</i> : text (max 256 characters). Nullable
	The IP address of the computer.
MACAddress	<i>Type</i> : text (max 256 characters). Nullable
	The MAC address of the computer.

Database Column	Details
Manufacturer	Type: text (max 128 characters). Nullable
	The manufacturer of the computer hardware. Some examples include:
	 On Windows, the SMBios manufacturer (the WMI Manufacturer property of the 'Win32_ComputerSystem' class).
	 On Linux, 'Manufacturer' in the 'System Information' section resulting from the 'dmidecode' command. Sample command: 'dmidecode -s system-manufacturer'
	 On Solaris x86, as for Linux, with failovers first to 'sysinfo SI_HW_PROVIDER' and then to 'ModelNo'.
	 On Solaris SPARC, the 'sysinfo SI_HW_PROVIDER'. Typically this value is 'Sun_Microsystems' or, more recently, 'Oracle Corporation'. Failover to the 'ModelNo'.
	• On HP-UX, the string literal 'HP'.
	• On AIX, the 'modelname' system attribute preceding the comma character. For example, if the 'modelname' system attribute is 'IBM,8202-E4B', then use 'IBM'. This value is typically 'IBM'.
ModelNo	<i>Type</i> : text (max 128 characters). Nullable
	The model number of the computer.

Database Column	Details
SerialNo	<i>Type:</i> text (max 100 characters). Nullable
	The hardware serial number of the computer. The goal of this value is to be tied to the physical hardware, partition or virtual machine and to be as unique as possible across all computers in the organization. This is due to its use in tracking computers, particularly after an operating system rebuild. This value is also used to socialize computer inventory from different inventory sources, and is used to map virtual machine guest operating system inventory to the VM host on which the virtual machine is running. Example sources:
	 On Windows, the SMBios serial number. The WMI 'SerialNumber' property of the 'Win32_BIOS' class. Can fail over to the 'SerialNumber' property of the 'Win32_SystemEnclosure' class which is typically the same value.
	 On Linux, the SMBios serial number read using the command 'dmidecode -s system-serial-number'. Specifically, the 'System Information' section and the 'Serial Number' in that section is used.
	• On Solaris 10 8/07 or later, for a non-global zone, the UUID value from the /etc/zones/index file. For a global zone, the same as Solaris 10 releases earlier than 8/07.
	 For Solaris 10 releases earlier than 8/07, the hexadecimal version of 'SI_HW_SERIAL' with an appended hyphen character followed by the Zone's name. For example, '838bfc7b-global' or '838bfc7b-myzone'.
	• For Solaris 8 and 9, The hexadecimal version of 'SI_HW_SERIAL'.
	 For Mac OS X, the serial number of the machine as printed on the packaging and found in "About this Mac" from the desktop.
	 For HP-UX, the 'confstr _CS_PARTITION_IDENT' partition identifier if it is an nPar or vPar, or '_CS_MACHINE_IDENT' if not; with a failover to the machine serial number, and a final failover to the 'uname' machine identification number.
	• For AIX, the 'id_to_partition' system attribute, starting from the third character (strips a '0X' from the start). For example, if the 'id_to_partition' system attribute is '0X0473409002F7B201' then use '0473409002F7B201'.
HostID	<i>Type:</i> text (max 100 characters). Nullable
	An identifier for the host of the computer (when the computer is a virtual machine).
LastLoggedOnUser	<i>Type:</i> text (max 128 characters). Nullable
	The DOMAIN/SAMAccountName of the user last logged onto the computer.

Type: datetime. NullableThe date the computer last had inventory reported.Type: datetime. NullableThe date (and optionally time) when the hardware was last inventoried. For automated/scheduled data uploads through an inventory beacon, make sure that inventory dates are kept current, as they are used to report out- of-date inventory sources. For a one-time upload to the central application
<i>Type:</i> datetime. Nullable The date (and optionally time) when the hardware was last inventoried. For automated/scheduled data uploads through an inventory beacon, make sure that inventory dates are kept current, as they are used to report out-
The date (and optionally time) when the hardware was last inventoried. For automated/scheduled data uploads through an inventory beacon, make sure that inventory dates are kept current, as they are used to report out-
server, leave inventory dates empty (null). At each import from the saved file, the import date is used as the inventory date, which prevents the inventory becoming stale.
<i>Type:</i> datetime. Nullable
The date when services (for example, Oracle) were last scanned on this computer. For automated/scheduled data uploads through an inventory beacon, make sure that inventory dates are kept current, as they are used to report out-of-date inventory sources. For a one-time upload to the central application server, leave inventory dates empty (null). At each import from the saved file, the import date is used as the inventory date, which prevents the inventory becoming stale.
Type: text (max 128 characters)
The name of the person or tool that performed the last inventory.
<i>Type:</i> integer. Nullable
Identifier of the computer in the ComplianceComputer table that this
imported computer links to. This is populated by the import process and does not need to be provided by the source connections.
<i>Type</i> : integer. Nullable
Identifier of the domain in the ComplianceDomain table that this computer
belongs to. This is populated by the import process and does not need to be provided by the source connections.
<i>Type</i> : boolean. Nullable
Used to identify records which do not have all information specified.
Primarily used for ManageSoft source connections where the domain name was not reliably reported.
<i>Type</i> : integer. Nullable
The number of sockets in the computer.
<i>Type</i> : decimal. Nullable
The fractional processor count available to this computer.

Database Column	Details
UntrustedSerialNo	<i>Type:</i> boolean Use when this computer is known to have a serial number from a data source that should not be trusted.
FullDetailsFromExternalID	<i>Type:</i> big integer. Nullable If this computer is marked as incomplete, and some of its properties are updated from another computer, record the external ID if the full computer.
FullDetailsFrom ComplianceConnectionID	<i>Type:</i> integer. Nullable If this computer is marked as incomplete, and some of its properties are updated from another computer, record the connection ID if the full computer.
ComplianceComputerTypeID	<i>Type:</i> integer. Nullable If you know that the computer is a virtual machine or VM host, record that data here. If you are unsure, leave this cell empty (NULL): this allows the system to infer the computer type (for example, a computer with VMs linked to it is inferred to be a VM host). If data comes from multiple inventory sources, leaving this value as null also allows the value to be inserted from another source. So, unless there is a very good reason, do not just specify 'Computer', but allow the inference rules to help.
ILMTAgentID	<i>Type:</i> big integer. Nullable Store the unique ID used by the ILMT agent on this device, if the inventory source is aware of this value.
FNMPComputerUID	<i>Type:</i> unique identifier. Nullable The unique identifier generated for the computer from the IM database. This property should only be populated by the ManageSoft inventory adapter.
HostIdentifyingNumber	<i>Type:</i> text (max 128 characters). Nullable Virtual hosts may have an identifier that is unique only across that hardware model. It is less unique than the true hardware serial number, for example.

Database Column	Details
HostType	<i>Type:</i> text (max 128 characters). Nullable
	The type of the physical host computer. This value is similar to the model number, but it is always for the physical server that an execution context may be running on. Therefore, this will generally be a known value for standalone machines and partitions, but it will not be known for virtual machines. This value is used for matching computers. Examples:
	• 'i86pc'
	• 'Sun-Fire-T1000'
	• 'rx7620'
	• '785' (for a 9000/785/C3700)
	• '8202' (for an IBM,8202-E4B).
NumberOfLogicalProcessors	<i>Type:</i> integer. Nullable
	The number of logical processors in the computer.
IsRemoteACLDevice	<i>Type:</i> boolean Used to determine if the current record is a remote ACL based device.
IsDuplicate	<i>Type:</i> boolean Used to identify that imported computer is a duplicate of another, whereby a new computer will not created.
LegacySerialNo	<i>Type:</i> text (max 100 characters). Nullable
	A previous serial number of this computer that can also be used for matching.
UUID	<i>Type:</i> unique identifier. Nullable
	The BIOS UUID of the computer.
IMEI	<i>Type:</i> text (max 256 characters). Nullable
	IMEI (International Mobile Equipment Identity) is a 15- or 17-digit code that uniquely identifies mobile phone sets. Leave blank (null) for other device types.
PhoneNumber	<i>Type:</i> text (max 128 characters). Nullable
	The phone number of the device. Used for mobile devices.
EmailAddress	<i>Type:</i> text (max 256 characters). Nullable
	The email address associated with the device. Typically used for mobile devices.

Database Column	Details
CalculatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The domain/SAMAccountName of the calculated user. Some inventory systems calculate the user who owns a computer. For example, it might be the user who, over the last ten logins, logged in most often.
LastSuccessful	<i>Type:</i> datetime. Nullable
InventoryDate	For incremental imports, this represents the inventory date of the computer in the source at the time this record was last successfully imported. If the import procedure has failed, this may be different to the inventory date. At the end of a successful incremental import, this value is updated to match the inventory date. If no value is present in this field, either there has not been a successful import of this computer or the reader for this record is not using an incremental update model.
MDScheduleGeneratedDate	<i>Type:</i> datetime. Nullable
	The last time the managed device schedule was regenerated.
MDScheduleContainsPVUScan	<i>Type:</i> boolean. Nullable
	Does this managed device include an event in its current schedule for running extra IBM PVU hardware scans.
FirmwareSerialNumber	<i>Type:</i> text (max 100 characters). Nullable
	Serial number in the system firmware such as BIOS, EEPROM etc.
MachineID	<i>Type:</i> text (max 100 characters). Nullable
	For AIX, it is the System ID. For HP-UX, it is the Machine/Software ID. It is unset for other platforms.
IgnoredDueToLicense	<i>Type:</i> boolean
	True if this machine is not imported into compliance computer table due to license limitation
CloudServiceProvider	<i>Type:</i> text (max 256 characters). Nullable
	The cloud service provider for the computer record.
CSPMetadataJsonBlob	<i>Type:</i> text (max 4000 characters). Nullable
	Contains the json blob for an Imported Computer record

ImportedARSLicense Table

The ImportedARSLicense table stores Action Request System BMC licenses.

Table 658: Database columns for ImportedARSLicense table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier of a data source connection in the ComplianceConnection
	table.
ComputerID	<i>Type:</i> big integer. Key
	The identifier used in the source connection to represent the computer.
SoftwareLicenseID	<i>Type:</i> integer. Nullable
	The identifier for the license in the SoftwareLicense table.
ARSLicenseID	<i>Type:</i> integer
	The identifier for the imported ARS license.
ComplianceComputerID	<i>Type:</i> integer. Nullable
	The identifier for the compliance computer in the ComplianceComputer
	table.
LicenseType	<i>Type:</i> text (max 128 characters). Key
	The ARS license name.
ECMLicenseName	<i>Type:</i> text (max 256 characters)
	The name of the license in the FlexNet Manager Suite.
LicenseKey	<i>Type:</i> text (max 32 characters). Key. Nullable
	The imported license key.
LicenseSubType	<i>Type:</i> text (max 16 characters). Key
	The license subtype (FlexNet Manager Suite license version).
IssueDate	<i>Type:</i> datetime. Key
	The identifier for the issue date.
ExpiryDate	<i>Type:</i> datetime. Key. Nullable
	The identifier for the expiry date.
SiteName	<i>Type:</i> text (max 64 characters)
	The identifier for the site name.
HostID	<i>Type:</i> text (max 64 characters)
	An identifier for the ARS host in the source connection (not used in FlexNet
	Manager Suite).
LicenseNum	<i>Type:</i> integer
	The purchase count for the ARS license.

Database Column	Details
TokenList	<i>Type:</i> text (max 128 characters). Nullable The ARS token list (not used in FlexNet Manager Suite).
Comment	<i>Type:</i> text. Nullable Extra information about the ARS license.
Deleted	<i>Type:</i> integer Set this flag if an ARS license is to be deleted.

ImportedAccessingDevice Table

The ImportedAccessingDevice table holds a record client access device information.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 659: Database columns for ImportedAccessingDevice table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier for a data source connection in the ComplianceConnection
	table.
ExternalAccessingDeviceID	<i>Type:</i> big integer. Key
	The identifier used to identify the device in source connection
AccessingDeviceID	<i>Type:</i> integer. Key. Nullable
	Matching accessing device ID. Foreign key to the AccessingDevice table.
IPAddress	<i>Type:</i> text (max 256 characters). Key. Nullable
	IP Address of the client accessing device.
ComputerName	<i>Type:</i> text (max 256 characters). Key. Nullable
	Computer name of the client accessing device.
SerialNo	<i>Type:</i> text (max 100 characters). Nullable
	Serial no of the client accessing device.
Domain	<i>Type:</i> text (max 100 characters). Key. Nullable
	Domain name of the client accessing device.

ImportedAccessingUser Table

The ImportedAccessingUser table holds a record of the user access infomarion.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 660: Database columns for ImportedAccessingUser table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier for a data source connection in the ComplianceConnection table.
ExternalAccessingUserID	<i>Type</i> : big integer. Key The accessing user id. This is part of the key.
AccessingUserID	<i>Type:</i> integer. Key. Nullable The matching AccessingUser ID. Foreign key to the AccessingUser table.
UserName	<i>Type</i> : text (max 256 characters). Key User name of the accessing user.
DomainName	<i>Type</i> : text (max 100 characters). Key. Nullable Domain name of the accessing user.
SAMAccountName	<i>Type:</i> text (max 64 characters). Nullable SAM account name of the accessing user.

ImportedActiveDirectoryComputer Table

The ImportedActiveDirectoryComputer table stores the incoming active directory data for computers.

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key The identifier of a data source connection in the ComplianceConnection
	table.
GUID	<i>Type:</i> unique identifier. Key
	The GUID of the computer.
ComputerName	<i>Type:</i> text (max 64 characters)
	The name of the computer. In Windows, this is the NetBIOS name of the
	local computer, as returned by GetComputerName(). For UNIX, it is the host name of the machine, as returned by gethostname(2).
DomainName	<i>Type:</i> text (max 100 characters)
	The domain name for the computer.
SID	<i>Type:</i> text (max 256 characters). Nullable
	The SID of the computer.

Table 661: Database columns for ImportedActiveDirectoryComputer table

ImportedActiveDirectoryDomain Table

The ImportedActiveDirectoryDomain table stores the incoming active directory domains for a connection source.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier of a data source connection in the ComplianceConnection table.
DomainFQDN	<i>Type:</i> text (max 100 characters). Key The fully qualified name domain name of the AD domain
FlatName	<i>Type:</i> text (max 32 characters) The AD domain flat name

Table 662: Database columns for ImportedActiveDirectoryDomain table

Database Column

Details

LastADImportTime

Type: datetime

The last time the AD data was imported

ImportedActiveDirectoryExternalMember Table

The ImportedActiveDirectoryExternalMember table stores the incoming active directory data for external AD member objects.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 663: Database columns for ImportedActiveDirectoryExternalMember table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier of a data source connection in the ComplianceConnection table.
ParentGroupGUID	<i>Type:</i> unique identifier. Key The parent AD group GUID.
SID	<i>Type:</i> text (max 256 characters). Key The SID of the member object.

ImportedActiveDirectoryGroup Table

The ImportedActiveDirectoryGroup table stores the incoming active directory data for a connection source.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 664: Database columns for ImportedActiveDirectoryGroup table

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key The identifier of a data source connection in the ComplianceConnection table.

Database Column	Details
GUID	<i>Type:</i> unique identifier. Key The GUID of the AD group.
SID	<i>Type:</i> text (max 256 characters). Nullable The SID of the AD group.
Name	<i>Type:</i> text (max 128 characters). Nullable The AD group name
DomainName	<i>Type:</i> text (max 100 characters) The domain name for the user.

ImportedActiveDirectoryMember Table

The ImportedActiveDirectoryMember table stores the incoming active directory data for AD member objects.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 665: Database columns for ImportedActiveDirectoryMember table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier of a data source connection in the ComplianceConnection table.
GUID	<i>Type:</i> unique identifier. Key The GUID of the member object.
ParentGroupGUID	<i>Type:</i> unique identifier. Key The parent AD group GUID.

ImportedActiveDirectoryUser Table

The ImportedActiveDirectoryUser table stores the incoming active directory data for users.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier of a data source connection in the ComplianceConnection table.
GUID	<i>Type:</i> unique identifier. Key The GUID of the user.
SAMAccountName	<i>Type:</i> text (max 20 characters) The user name.
DomainName	<i>Type:</i> text (max 100 characters) The domain name for the user.
Sid	<i>Type:</i> text (max 256 characters). Nullable The Sid for the user.

Table 666: Database columns for ImportedActiveDirectoryUser table

ImportedActiveSyncDevice Table

The ImportedActiveSyncDevice table stores details of ActiveSync partnerships. A partnership is a user/device pair, so there may be multiple rows for one device.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalID	<i>Type:</i> integer. Key. Generated ID The identifier used in the source connection for the computer.
ActiveSyncID	<i>Type:</i> text (max 512 characters). Key. Nullable The EASIdentity presented by the source, a combination of the AD user and the unique device ID.
Domain	<i>Type:</i> text (max 100 characters). Nullable The domain of the device. This may be a flat name or FQDN.

Database Column	Details
DeviceID	<i>Type:</i> text (max 100 characters). Nullable
	The unique device identifier.
Device0S	<i>Type:</i> text (max 100 characters). Nullable
	The device operating system.
DeviceModel	<i>Type:</i> text (max 100 characters). Nullable
	The device model.
DeviceType	<i>Type:</i> text (max 50 characters). Nullable
	The device type.
DeviceUserAgent	<i>Type:</i> text (max 100 characters). Nullable
	The device user agent; an ActiveSync client-specific value that may identify
	the device type.
UserDisplayName	<i>Type:</i> text (max 256 characters). Nullable
	The AD user display name.
IMEI	<i>Type:</i> text (max 256 characters). Nullable
	IMEI (International Mobile Equipment Identity) is a 15- or 17-digit code that uniquely identifies mobile phone sets. Leave blank (null) for other device types.
PhoneNumber	<i>Type:</i> text (max 128 characters). Nullable
	The phone number of the device. Used for mobile devices.
EmailAddress	<i>Type:</i> text (max 256 characters). Nullable
	The user's primary email address.
ExchangeServer	<i>Type:</i> text (max 256 characters). Nullable
	The source exchange server for this information.
WhenCreatedUTC	<i>Type:</i> datetime. Nullable
	The date/time this partnership was created, in UTC.
LastSyncAttemptTime	<i>Type:</i> datetime. Nullable
	The last attempted sync time for this partnership, in UTC.
LastSuccessSync	<i>Type:</i> datetime. Nullable
	The last successful sync time for this partnership, in UTC.

ImportedAttributeMapping Table

The ImportedAttributeMapping table is used by the importer to link imported instance attributes with attributes in the Attribute table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 668: Database columns for ImportedAttributeMapping table

Database Column	Details
AttributeID	<i>Type:</i> integer. Nullable The identifier for the instance attribute in the Attribute table.
ExternalAttributeID	<i>Type:</i> integer. Key. Nullable The identifier used in the source connection for the imported instance attribute.
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier of a data source connection in the ComplianceConnection table.

ImportedClientAccessEvidence Table

The ImportedClientAccessEvidence table holds all of the client access evidence which has been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 669: Database columns for ImportedClientAccessEvidence table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier for a data source connection in the ComplianceConnection table.
ExternalAccessEvidenceID	<i>Type:</i> big integer. Key The identifier of the client access evidence.
ProductName	<i>Type:</i> text (max 256 characters). Key. Nullable The name of the product being accessed by user or computer. This may include version and edition too.
Version	<i>Type</i> : text (max 72 characters). Key. Nullable The version of the installed product.

Database Column	Details
Edition	<i>Type:</i> text (max 50 characters). Nullable
	The edition of the installed product.
UALRoleName	<i>Type:</i> text (max 256 characters). Nullable
	The UAL role name of the product being accessed by user or computer. This is used when retrive data using UAL.
UALRoleGUID	<i>Type:</i> unique identifier. Nullable
	The UAL role GUID of the product being accessed by user or computer. This is used when retrive data using UAL
Publisher	<i>Type:</i> text (max 200 characters). Nullable
	The name of the publisher of the installed product. Defaulting to Microsoft as per recommendation.

ImportedClientAccessEvidenceMapping Table

The ImportedClientAccessEvidenceMapping is the mapping table for imported access evidence and access evidence

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 670: Database columns for ImportedClientAccessEvidenceMapping table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier for a data source connection in the ComplianceConnection table.
ExternalAccessEvidenceID	<i>Type:</i> big integer. Key External Access evidend id. Foreign key to ImportedClientAccessedAccessEvidence table.
AccessEvidenceID	<i>Type:</i> integer. Key Access evidend id. Foreign key to AccessEvidence table.

ImportedClientAccessedAccessEvidence Table

The ImportedClientAccessedAccessEvidence table holds a record of the installer evidence that has been installed on a computer from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ImportedClientAccessed AccessEvidenceID	<i>Type:</i> big integer. Key The identifier used in the source connection for the installer evidence.
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier for a data source connection in the ComplianceConnection table.
ExternalAccessEvidenceID	<i>Type:</i> big integer. Key Access evidence id .Foreign key to the ImportedClientAccessEvidence table.
ExternalAccessingDeviceID	<i>Type:</i> big integer. Key. Nullable Accessing computer id .Foreign key to the ImportedAccessingDevice table
ExternalAccessingUserID	<i>Type:</i> big integer. Key. Nullable Accessing userid. Foreign key to the ImportedAccessingUser table
ExternalServerComputerID	<i>Type:</i> big integer. Key. Nullable Server computer id .Foreign key to the ImportedComputer table.
ClientAccessSource	<i>Type:</i> text (max 100 characters). Key Referencing to the client access source type.

 Table 671: Database columns for ImportedClientAccessedAccessEvidence table

ImportedClientAccessedAccessOccurrence Table

The ImportedClientAccessedAccessOccurrence table holds the access information of device or user

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier for a data source connection in the ComplianceConnection table.
ImportedClientAccessed	<i>Type:</i> big integer. Key
AccessEvidenceID	Access evidence id. Foreign key to the
	ImportedClientAccessedAccessEvidence table
AccessCount	<i>Type</i> : integer
	Number of access frequency for given date
InventoryDate	<i>Type</i> : datetime. Key
	Date on which inventory occurance was recorded.
LicenseDate	<i>Type:</i> datetime. Key
	Date which will be used for licensing purpose.
AccessDate	<i>Type:</i> datetime. Nullable
	The access date.

Table 672: Database columns for ImportedClientAccessedAccessOccurrence table

ImportedCluster Table

The ImportedCluster table holds all of the clusters which have been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 673: Database columns for ImportedCluster table

Database Column	Details
ExternalID	<i>Type</i> : big integer. Key. Nullable The unique identifier for this imported cluster.
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.

Database Column	Details
ClusterID	<i>Type</i> : integer. Nullable
	The unique identifier for this imported cluster. Note that this maps to the 'ExternalID' column in the 'ImportedCluster' table, and not to the 'ClusterID' column.
ExternalName	<i>Type:</i> text (max 256 characters). Nullable
	The identifier of the cluster in the external cluster management system.
Name	<i>Type:</i> text (max 256 characters)
	The user-visible name of the cluster.
Namespace	<i>Type:</i> text (max 256 characters). Nullable
	The name of the domain/datacenter containing the cluster.
ClusterTypeID	<i>Type:</i> integer
	The type of cluster.
InventoryDate	<i>Type:</i> datetime. Nullable
	The date the cluster last had inventory reported.
InventoryAgent	<i>Type</i> : text (max 64 characters). Nullable
	The name of the person or tool that performed the last inventory.
DRS	<i>Type</i> : boolean. Nullable
	Whether Distributed Resource Scheduler (DRS) is enabled
DPM	<i>Type:</i> boolean. Nullable
	Whether Distributed Power Management (DPM) is enabled

ImportedClusterGroup Table

The ImportedClusterGroup table holds all of the group objects defined on clusters which have been retrieved from the source connections.

Database Column	Details
ExternalID	<i>Type:</i> big integer. Key. Nullable
	The unique identifier for this imported cluster group.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ClusterID	<i>Type:</i> integer. Nullable The assigned identifier for this cluster group.
ClusterExternalID	<i>Type:</i> big integer. Key The unique identifier for the imported cluster.
Name	<i>Type:</i> text (max 256 characters) The name of the cluster group.
ClusterTypeID	<i>Type:</i> integer Foreign key to the ClusterType table.

ImportedClusterGroupMember Table

The ImportedClusterGroupMember table holds all of the group memberships defined on clusters which have been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 675: Database columns for ImportedClusterGroupMember table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
ClusterGroupExternalID	<i>Type:</i> big integer. Key
	The unique identifier for the imported cluster group.
ComputerExternalID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the external computer which is a member of the group.
VCObjectID	<i>Type:</i> text (max 256 characters). Key. Nullable
	The identifier of the virtual machine in Virtual Center.

ImportedClusterHostAffinityRule Table

The ImportedClusterHostAffinityRule table holds all of the host affinity rules for a cluster which have been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
ClusterExternalID	<i>Type:</i> big integer. Key
	The unique identifier for the imported cluster.
Name	<i>Type:</i> text (max 256 characters). Key
	The name of the cluster group.
ClusterHostGroup	<i>Type:</i> big integer. Key
ExternalID	The unique identifier for the imported cluster host group.
ClusterVMGroupExternalID	<i>Type:</i> big integer. Key
	The unique identifier for the imported cluster VM group.
ClusterHostAffinity	<i>Type:</i> integer
RuleTypeID	A unique identifier indicating a type of Cluster Host Affinity Rule.

Table 676: Database columns for ImportedClusterHostAffinityRule table

ImportedClusterNode Table

The ImportedClusterNode table holds all of the cluster nodes which have been retrieved from the source connections.

Table 677: Database columns for ImportedClusterNode table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ClusterExternalID	<i>Type:</i> big integer. Key The unique identifier for the imported cluster.
ComputerExternalID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the external computer which is a member of the cluster.
ClusterNodeTypeID	<i>Type</i> : integer Foreign key to the ClusterNodeType table.

ImportedComputer Table

The ImportedComputer table holds all of the computers which have been retrieved from the source connections.

Table 678: Database columns fo	r ImportedComputer table
--------------------------------	--------------------------

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
ExternalID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the computer.
ComputerName	<i>Type:</i> text (max 256 characters). Key. Nullable
	The name of the computer. In Windows, this is the NetBIOS name of the local computer, as returned by GetComputerName(). For UNIX, it is the host
	name of the machine, as returned by gethostname(2).
Domain	Type: text (max 100 characters). Key. Nullable
	The domain of the computer.

Database Column	Details
OperatingSystem	Type: text (max 128 characters). Nullable
	The operating system of the computer.
ServicePack	Type: text (max 128 characters). Nullable
	The service pack installed for the operating system.
NumberOfProcessors	<i>Type:</i> integer. Nullable
	The number of processors in the computer.
ProcessorType	<i>Type:</i> text (max 256 characters). Nullable
	The type of processor in the computer.
MaxClockSpeed	<i>Type:</i> integer. Nullable
	The maximum clock speed of the fastest processor in the computer.
NumberOfCores	<i>Type:</i> integer. Nullable
	The number of cores in the computer.
TotalMemory	<i>Type:</i> big integer. Nullable
	The total RAM in the computer, in bytes.
ChassisType	Type: text (max 128 characters). Nullable
	The type of case of the computer. The value must be a (case insensitive) exact match for one of the values shown. Note that some license types use
	this information to optimize the licensing position, particularly with desktop and laptop computers.
NumberOfHardDrives	<i>Type:</i> integer. Nullable
	The number of hard drives in the computer.
TotalDiskSpace	<i>Type:</i> big integer. Nullable
	The total size of all hard drives in the computer.
NumberOfNetworkCards	<i>Type:</i> integer. Nullable
	The number of network cards in the computer.
NumberOfDisplayAdapters	<i>Type:</i> integer. Nullable
	The number of graphics cards in the computer.
IPAddress	<i>Type:</i> text (max 256 characters). Nullable
	The IP address of the computer.
MACAddress	<i>Type:</i> text (max 256 characters). Nullable
	The MAC address of the computer.

Database Column	Details
Manufacturer	 <i>Type:</i> text (max 128 characters). Key. Nullable The manufacturer of the computer hardware. Some examples include: On Windows, the SMBios manufacturer (the WMI Manufacturer property of the 'Win32_ComputerSystem' class).
	 On Linux, 'Manufacturer' in the 'System Information' section resulting from the 'dmidecode' command. Sample command: 'dmidecode -s system-manufacturer'
	 On Solaris x86, as for Linux, with failovers first to 'sysinfo SI_HW_PROVIDER' and then to 'ModelNo'.
	 On Solaris SPARC, the 'sysinfo SI_HW_PROVIDER'. Typically this value is 'Sun_Microsystems' or, more recently, 'Oracle Corporation'. Failover to the 'ModelNo'.
	• On HP-UX, the string literal 'HP'.
	• On AIX, the 'modelname' system attribute preceding the comma character. For example, if the 'modelname' system attribute is 'IBM,8202-E4B', then use 'IBM'. This value is typically 'IBM'.
ModelNo	<i>Type:</i> text (max 128 characters). Nullable
	The model of the computer hardware or the virtual machine. This value is defined for the context of the current execution environment, rather than the physical server that may be hosting a virtual machine or partition. Examples:
	 On Windows, the SMBios product name. The WMI Model property of the Win32_ComputerSystem class.
	 On Linux, the SMBios product name read using the command 'dmidecode -s system-product-name'. Specifically, the 'System Information' section and the 'Product Name' in that section is used.
	 On Solaris x86, as for Linux, with failover to the 'sysinfo SI_PLATFORM', stripping 'SUNW', and replacing hyphen characters with space characters.
	 On Solaris SPARC, the 'openprom' "banner-name" value read from '/dev/ openprom'. Failover to the 'sysinfo SI_PLATFORM', stripping 'SUNW', and replacing hyphen characters with space characters.
	• On HP-UX, the 'confstr _CS_MACHINE_MODEL'.
	• On AIX, the 'modelname' system attribute following the comma character. For example, if the 'modelname' system attribute is 'IBM,8202-E4B', then use '8202-E4B'.

Database Column	Details
SerialNo	<i>Type:</i> text (max 100 characters). Nullable
	The hardware serial number of the computer. The goal of this value is to be tied to the physical hardware, partition or virtual machine and to be as unique as possible across all computers in the organization. This is due to its use in tracking computers, particularly after an operating system rebuild This value is also used to socialize computer inventory from different inventory sources, and is used to map virtual machine guest operating system inventory to the VM host on which the virtual machine is running. Example sources:
	 On Windows, the SMBios serial number. The WMI 'SerialNumber' property of the 'Win32_BIOS' class. Can fail over to the 'SerialNumber' property of the 'Win32_SystemEnclosure' class which is typically the sam value.
	 On Linux, the SMBios serial number read using the command 'dmidecode -s system-serial-number'. Specifically, the 'System Information' section and the 'Serial Number' in that section is used.
	• On Solaris 10 8/07 or later, for a non-global zone, the UUID value from the /etc/zones/index file. For a global zone, the same as Solaris 10 releases earlier than 8/07.
	• For Solaris 10 releases earlier than 8/07, the hexadecimal version of 'SI_HW_SERIAL' with an appended hyphen character followed by the Zone's name. For example, '838bfc7b-global' or '838bfc7b-myzone'.
	• For Solaris 8 and 9, The hexadecimal version of 'SI_HW_SERIAL'.
	 For Mac OS X, the serial number of the machine as printed on the packaging and found in "About this Mac" from the desktop.
	 For HP-UX, the 'confstr _CS_PARTITION_IDENT' partition identifier if it is an nPar or vPar, or '_CS_MACHINE_IDENT' if not; with a failover to the machine serial number, and a final failover to the 'uname' machine identification number.
	 For AIX, the 'id_to_partition' system attribute, starting from the third character (strips a '0X' from the start). For example, if the 'id_to_partition system attribute is '0X0473409002F7B201' then use '0473409002F7B201

Database Column	Details
HostID	<i>Type:</i> text (max 100 characters). Nullable
	An identifier for the host of the computer (when inventorying a machine partition such as Solaris Zone, AIX IPar, HP-UX nPar/vPar). Examples:
	 For a Zone on Solaris, the hexadecimal version of SI_HW_SERIAL.
	 For nPar/vPar on HP-UX, the 'confstr _CS_MACHINE_IDENT' unique machine identifier.
	 For IPar on AIX, the 'modelname' system attribute following the comma character. For example, if the 'modelname' system attribute is 'IBM,8202-E4B', then use '8202-E4B'.
LastLoggedOnUser	<i>Type:</i> text (max 128 characters). Nullable
	The DOMAIN/SAMAccountName of the user last logged onto the computer.
InventoryDate	<i>Type:</i> datetime. Nullable
	The date the computer last had inventory reported.
HardwareInventoryDate	<i>Type:</i> datetime. Nullable The date (and optionally time) when the hardware was last inventoried. For automated/scheduled data uploads through an inventory beacon, make sure that inventory dates are kept current, as they are used to report out- of-date inventory sources. For a one-time upload to the central application server, leave inventory dates empty (null). At each import from the saved file, the import date is used as the inventory date, which prevents the inventory becoming stale. Notice that this value is not available in the web interface.
ServicesInventoryDate	<i>Type:</i> datetime. Nullable
	The date when services (for example, Oracle) were last scanned on this computer. For automated/scheduled data uploads through an inventory beacon, make sure that inventory dates are kept current, as they are used to report out-of-date inventory sources. For a one-time upload to the central application server, leave inventory dates empty (null). At each import from the saved file, the import date is used as the inventory date, which prevents the inventory becoming stale.
InventoryAgent	<i>Type:</i> text (max 128 characters)
	The name of the person or tool that performed the last inventory. For imported spreadsheets, you may wish to include the name of the person preparing the data, in case there is subsequent follow-up required.

Database Column	Details
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable
	Identifier of the computer in the ComplianceComputer table that this
	imported computer links to. This is populated by the import process and does not need to be provided by the source connections.
ComplianceDomainID	<i>Type:</i> integer. Key. Nullable
	Identifier of the domain in the ComplianceDomain table that this computer
	belongs to. This is populated by the import process and does not need to be provided by the source connections.
IncompleteRecord	<i>Type:</i> boolean. Nullable
	Used to identify records which do not have all information specified. Primarily used for ManageSoft source connections where the domain name was not reliably reported.
NumberOfSockets	<i>Type:</i> integer. Nullable
	The number of sockets in the computer.
PartialNumberOfProcessors	<i>Type:</i> decimal. Nullable
	The fractional processor count available to this computer.
UntrustedSerialNo	<i>Type:</i> boolean
	Is this computer known to have a serial number from a data source that should not be trusted.
FullDetailsFromExternalID	<i>Type:</i> big integer. Nullable
	If this computer is marked as incomplete, and some of its properties are updated from another computer, record the external ID if the full computer.
FullDetailsFrom	<i>Type:</i> integer. Nullable
ComplianceConnectionID	If this computer is marked as incomplete, and some of its properties are updated from another computer, record the connection ID if the full computer.
ComplianceComputerTypeID	<i>Type:</i> integer. Nullable
	If you know that the computer is a virtual machine or VM host, record that data here. If you are unsure, leave this cell empty (NULL): this allows the system to infer the computer type (for example, a computer with VMs linked to it is inferred to be a VM host). If data comes from multiple inventory sources, leaving this value as null also allows the value to be inserted from another source. So, unless there is a very good reason, do not just specify 'Computer', but allow the inference rules to help.

Database Column Details	
ILMTAgentID	<i>Type:</i> big integer. Key. Nullable The unique ID used by the IBM License Metric Tool (ILMT) inventory agent on this device, if the inventory source is aware of this value. This can be used to track a computer over time and can be used to socialize different inventory sources. Currently the ILMT and ManageSoft inventory adapters report this value. To find these values:
	 On Windows: The standalone and agent based ILMT configuration files are '\$(WindowsFolder)/itlm/tlmstandalone.ini' and '\$(WindowsFolder)/itlm/tlmagent.ini' respectively. Read the 'agentid' property from these files using a case-insensitive match against the property name.
	• On UNIX: The standalone and agent based ILMT configuration files are '/etc/tlmstandalone.ini' and '/etc/tlmagent.ini' respectively. Read the 'agentid' property from these files using a case-insensitive match against the property name.
FNMPComputerUID	<i>Type:</i> unique identifier. Key. Nullable
	The unique identifier generated for the computer from the IM database. This property should only be populated by the ManageSoft inventory adapter.
HostIdentifyingNumber	<i>Type:</i> text (max 128 characters). Key. Nullable
	Virtual hosts may have an identifier that is unique only across that hardware model. It is less unique than the true hardware serial number, for example.
HostType	<i>Type</i> : text (max 128 characters). Key. Nullable
	The type of the physical host computer. This value is similar to the model number, but it is always for the physical server that an execution context may be running on. Therefore, this will generally be a known value for standalone machines and partitions, but it will not be known for virtual machines. This value is used for matching computers. Examples:
	• 'i86pc'
	• 'Sun-Fire-T1000'
	• 'rx7620'
	• '785' (for a 9000/785/C3700)
	• '8202' (for an IBM,8202-E4B).
NumberOfLogicalProcessors	<i>Type:</i> integer. Nullable
	The number of logical processors in the computer.

Database Column	Details
IsRemoteACLDevice	<i>Type:</i> boolean. Key
	Used to determine if the current record is a remote ACL based device.
IsDuplicate	<i>Type:</i> boolean
	Used to identify that imported computer is a duplicate of another, whereby a new computer will not created.
LegacySerialNo	<i>Type:</i> text (max 100 characters). Nullable
	A previous serial number of this computer that can also be used for matching.
UUID	<i>Type:</i> unique identifier. Key. Nullable
	The BIOS UUID of the computer.
IMEI	<i>Type:</i> text (max 256 characters). Nullable
	IMEI (International Mobile Equipment Identity) is a 15- or 17-digit code that uniquely identifies mobile phone sets. Leave blank (null) for other device types.
PhoneNumber	<i>Type:</i> text (max 128 characters). Nullable
	The phone number of the device. Used for mobile devices.
EmailAddress	<i>Type:</i> text (max 256 characters). Nullable
	The email address associated with the device. Typically used for mobile devices.
CalculatedUser	<i>Type:</i> text (max 128 characters). Nullable
	The domain/SAMAccountName of the calculated user. Some inventory systems calculate the user who owns a computer. For example, it might be the user who, over the last ten logins, logged in most often.
LastSuccessful	<i>Type:</i> datetime. Nullable
InventoryDate	For incremental imports, this represents the inventory date of the computer in the source at the time this record was last successfully imported. If the import procedure has failed, this may be different to the inventory date. At the end of a successful incremental import, this value is updated to match the inventory date. If no value is present in this field, either there has not been a successful import of this computer or the reader for this record is not using an incremental update model.
MDScheduleGeneratedDate	<i>Type:</i> datetime. Nullable
	The last time the managed device schedule was regenerated.
MDScheduleContainsPVUScan	<i>Type:</i> boolean. Nullable
	Does this managed device include an event in its current schedule for running extra IBM PVU hardware scans.

Database Column	Details			
FirmwareSerialNumber	<i>Type</i> : text (max 100 characters). Nullable Serial number in the system firmware such as BIOS, EEPROM etc.			
MachineID	<i>Type:</i> text (max 100 characters). Nullable For AIX, it is the System ID. For HP-UX, it is the Machine/Software ID. It is unset for other platforms.			
IgnoredDueToLicense	<i>Type</i> : boolean True if this machine is not imported into compliance computer table due to license limitation			
CloudServiceProvider	<i>Type:</i> text (max 256 characters). Nullable A unique identifier for a cloud service provider record.			
CSPMetadataJsonBlob	<i>Type:</i> text (max 4000 characters). Nullable Contains the json blob for an Imported Computer record			

ImportedComputerCustomProperty Table

The ImportedComputerCustomProperty table is used by the importer to import custom properties for computers.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details		
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier of a data source connection in the ComplianceConnection table.		
ExternalID	<i>Type:</i> big integer. Key The identifier, in the source connection, of the computer that this property belongs to.		
PropertyNameID	<i>Type:</i> integer. Key The identifier for custom property in the ImportedCustomPropertyName table.		
PropertyValue	<i>Type:</i> text (max 256 characters) The value of the custom property.		

Table 679: Database columns for ImportedComputerCustomProperty table

ImportedComputerScriptResult Table

The ImportedComputerScriptResult table holds all of the script results which have been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details	
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.	
ExternalComputerID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the computer.	
RecognitionRule	<i>Type:</i> text (max 256 characters). Key. Nullable The recognition rule.	
Revision	<i>Type:</i> integer. Nullable The revision number of the recognition rule.	
InventoryDate	<i>Type:</i> datetime. Nullable The date the recognition rule ran.	
Result	<i>Type:</i> text. Nullable The result of the recognition rule script.	

Table 680: Database columns for ImportedComputerScriptResult table

ImportedCustomPropertyName Table

The ImportedCustomPropertyName table is used by the importer to store the names of custom properties.

Table 681: Database columns for ImportedCustomPropertyName table

Database Column	Details
PropertyNameID	<i>Type:</i> integer. Key. Generated ID A unique identifier for custom property.
PropertyName	<i>Type:</i> text (max 256 characters). Key The name of the custom property.

ImportedDomain Table

The ImportedDomain table holds all of the domains which have been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 682: Database columns for ImportedDomain table

Database Column	Details		
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.		
ComplianceDomainID	<i>Type:</i> integer. Nullable Identifier of the domain in the ComplianceDomain table that this imported domain links to. This is populated as part of the import process and does not need to be provided by the source connections.		
QualifiedName	<i>Type</i> : text (max 200 characters). Key. Nullable The fully qualified name of the domain.		
FlatName	<i>Type:</i> text (max 200 characters). Key. Nullable The flat name of the domain.		

ImportedEvidenceAttribute Table

The ImportedEvidenceAttribute table holds all of the instance attributes from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 683: Database columns for ImportedEvidenceAttribute table

Database Column	Details	
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.	
AttributeID	<i>Type:</i> integer. Key. Nullable The identifier used in the source connection for the instance attribute.	

Database Column

Details

AttributeName

Type: text (max 256 characters). Key. Nullable

The name of the instance attribute.

ImportedFNMEAFeature Table

The ImportedFNMEAFeature table is used by the importer to import FlexNet Manager for Engineering Applications features.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 684:
 Database columns for ImportedFNMEAFeature table

Database Column	Details			
ComplianceConnectionID	<i>Type</i> : integer The identifier of a data source connection in the ComplianceConnection table.			
ExternalID	<i>Type:</i> integer. Key. Generated ID The identifier of the feature from the external data source.			
Name	<i>Type:</i> text (max 256 characters) The name for this feature.			
Version	<i>Type:</i> text (max 32 characters). Nullable The version of this feature.			
Publisher	<i>Type:</i> text (max 256 characters) The publisher of the feature.			
VendorDaemon	<i>Type:</i> text (max 256 characters) The vendor daemon of the feature.			
ConsumedQuantity	<i>Type:</i> integer The count of the feature installs.			
OutOfComplianceQuantity	y <i>Type:</i> integer The count of out-of-compliance feature installs, as calculated by FlexNet Manager for Engineering Applications.			
ComplianceStatus	<i>Type:</i> text (max 32 characters) The compliance status of this feature, as calculated by FlexNet Manager for Engineering Applications.			

Database Column	Details
FNMEAFeatureID	<i>Type:</i> integer. Nullable The identifier of the FlexNet Manager for Engineering Applications feature in the FNMEAFeature table that this imported FlexNet Manager for Engineering Applications feature links to. This is populated by the import process and does not need to be provided by the source connections.

ImportedFNMEAProduct Table

The ImportedFNMEAProduct table is used by the importer to import FlexNet Manager for Engineering Applications products.

Table 005: Database columns for imported inmediate table	Table 685:	Database	columns for	ImportedFNMEAProduct table
--	------------	----------	-------------	----------------------------

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key
	The identifier of a data source connection in the ComplianceConnection table.
ExternalID	<i>Type:</i> text (max 256 characters). Key
	The identifier of the product from the external data source. This is the product number in FlexNet Manager for Engineering Applications.
FeatureID	<i>Type:</i> integer. Key
	The identifier (from the external data source) of the feature this product is associated with.
Name	<i>Type:</i> text (max 256 characters)
	The name for this product.
Version	<i>Type:</i> text (max 32 characters). Key
	The version of this product.
VendorDaemon	<i>Type:</i> text (max 256 characters). Key
	The vendor daemon of the products feature.
Publisher	<i>Type:</i> text (max 256 characters)
	The publisher of the product.

Database Column	Details
PurchasedQuantity	<i>Type</i> : integer The count of the products purchased.
OutOfComplianceQuantity	<i>Type</i> : integer The count of out-of-compliance product installs, as calculated by FlexNet Manager for Engineering Applications.
ComplianceStatus	<i>Type</i> : text (max 32 characters) The compliance status of this feature, as calculated by FlexNet Manager for Engineering Applications.
FeatureQuantity	<i>Type:</i> integer The count of the features available per product purchased.
SoftwareLicenseID	<i>Type:</i> integer. Nullable The identifier of the software license in the SoftwareLicense table that this imported FlexNet Manager for Engineering Applications product links to. This is populated by the import process and does not need to be provided by the source connections.

ImportedFNMEAUsageStatus Table

The ImportedFNMEAUsageStatus table is used by the importer to import FlexNet Manager for Engineering Applications status values.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier of a data source connection in the ComplianceConnection table.
ProductNumber	<i>Type:</i> text (max 256 characters). Key The identifier of the product from the external data source. This is the product number in FlexNet Manager for Engineering Applications.
Version	<i>Type:</i> text (max 32 characters). Key The version of the product.

Table 686: Database columns for ImportedFNMEAUsageStatus table

Database Column	Details
Publisher	<i>Type:</i> text (max 256 characters). Key
	The publisher of the product.
Month	<i>Type:</i> integer
	The month of the usage for this product.
Year	<i>Type:</i> integer
	The year of the usage of this product.
HWMUsage	<i>Type:</i> integer
	The high water mark usage of this product.

ImportedFileEvidence Table

The ImportedFileEvidence table holds all of the file evidence which has been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 687: Database columns for ImportedFileEvidence table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
ExternalFileID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the file evidence.
FileName	<i>Type:</i> text (max 256 characters). Key. Nullable
	The name of the file used as evidence of software installation.
FileVersion	<i>Type:</i> text (max 100 characters). Nullable
	The version number of the file used as evidence of software installation.
ProductVersion	<i>Type:</i> text (max 200 characters). Nullable
	The product version number in the file header.
ProductName	<i>Type:</i> text (max 200 characters). Nullable
	The product name in the file header.

Database Column	Details
FilePath	<i>Type:</i> text (max 400 characters). Nullable
	The path of the file used as evidence of software installation.
Company	<i>Type:</i> text (max 100 characters). Key. Nullable
	The company in the file header.
Description	<i>Type</i> : text (max 200 characters)
	The description in the file header.
FileSize	<i>Type:</i> integer. Nullable
	The size of the file.
Language	<i>Type:</i> text (max 200 characters). Nullable
	The language in the file header.
AccessModeID	<i>Type</i> : integer. Key. Nullable
	The access mode ID of the file evidence.

ImportedFileEvidenceMapping Table

The ImportedFileEvidenceMapping table is used by the importer to link imported file evidence with evidence in the FileEvidence table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
FileEvidenceID	<i>Type:</i> integer. Key. Nullable The identifier for the file evidence in the NewFileEvidence table.
ExternalFileID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the imported file evidence.
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier of a data source connection in the ComplianceConnection table.

Table 688: Database columns for ImportedFileEvidenceMapping table

ImportedGuidMapping Table

The ImportedGuidMapping table is used by the importer to keep a history of entities that have been imported from a data source that uses GUID IDs rather than integer IDs.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier of a data source connection in the ComplianceConnection table.
Category	<i>Type</i> : text (max 100 characters). Key The importer category applicable for this ID space.
OriginalID	<i>Type</i> : unique identifier. Key The ID of this entity in the source database.
MappedID	<i>Type</i> : big integer. Generated ID A unique integer value we can use as an 'external ID' safely in the ImportedComputer table.

Table 689: Database columns for ImportedGuidMapping table

ImportedILMTPVUCounts Table

This table allows the summarised PVU sub capacity numbers to be imported from ILMT. These numbers are calculated by ILMT for a particular date range as PVU "reports".

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 690:
 Database columns for ImportedILMTPVUCounts table

Database Column	Details
ExternalNodeID	<i>Type:</i> big integer. Key The external ID of the server to which these points apply.
ExternalVMID	<i>Type</i> : big integer. Key. Nullable The external ID of the virtual machine associated with the node (server).

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key
	The current connection ID for this data source.
TitleName	<i>Type:</i> text (max 512 characters). Key
	The name of the title these points apply to.
Publisher	<i>Type:</i> text (max 254 characters). Key
	The name of the publisher of the title these points apply to.
SubCapacityCores	<i>Type</i> : integer
	The number of sub-capacity licensable cores for the license on the computer.
FullCapacityCores	<i>Type:</i> integer
	The number of full-capacity licensable cores for the license on the computer.
SubCapacityPVU	<i>Type:</i> integer
	The number of sub-capacity PVU counts consumed for the license on the computer.
FullCapacityPVU	<i>Type:</i> integer
	The number of full-capacity PVU counts consumed for the license on the computer.
PeakSubCapacityPVU	<i>Type:</i> integer
	The peak number of sub-capacity PVU counts consumed for the license on the computer.
PeakFullCapacityPVU	<i>Type:</i> integer
	The peak number of full-capacity PVU counts consumed for the license on the computer.

ImportedILMTPVUCreatedLicenses Table

This table stores a history of IBM PVU licenses that have been created by the ILMT adapter.

Database Column	Details
SoftwareLicenseID	<i>Type:</i> integer The ID of the created license.
TitleName	<i>Type:</i> text (max 512 characters) The name of the title that triggered the creation of the license.
Publisher	<i>Type</i> : text (max 254 characters) The name of the publisher of the title that triggered the creation of the license.

Table 691: Database columns for ImportedILMTPVUCreatedLicenses table

ImportedILMTVMMapping Table

The ImportedILMTVMMapping table is used by the importer to keep a history of all Virtual Machine IDs (adm.VM records) that have been imported from ILMT data sources.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 692: Database columns for ImportedILMTVMMapping table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier of a data source connection in the ComplianceConnection table.
OriginalID	<i>Type</i> : big integer. Key The agent ID of this agent in the ILMT database.
MappedID	<i>Type:</i> integer. Generated ID A unique integer value we can use as an 'external ID' safely in the ImportedComputer table.

ImportedInstalledFileEvidence Table

The ImportedInstalledFileEvidence table holds a record of the file evidence that has been installed on a computer from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 693: Database columns for ImportedInstalledFileEvidence table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection
ExternalID	table. <i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the computer that the file evidence is installed on.
ExternalFileID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the file evidence.
ExternalFilePathID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the path of the file evidence.

ImportedInstalledFileEvidenceUsage Table

The ImportedInstalledFileEvidenceUsage table holds a record of end-users that are using file evidence from the source connection.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
StartDate	<i>Type:</i> text (max 10 characters). Nullable The start date of the file evidence usage tracking period.
ExternalID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the computer that the file evidence is installed on.

Table 694: Database columns for ImportedInstalledFileEvidenceUsage table

Database Column	Details
ExternalUserID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the end-user that has used the file evidence.
ExternalFileID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the file evidence.
ActiveTimeInSeconds	<i>Type:</i> big integer. Nullable
	The number of seconds that the file evidence was in use during the usage tracking period.
NumberOfSessions	<i>Type:</i> big integer. Nullable
	The number of sessions that the file evidence was in use during the usage tracking period.
LastUsedDate	<i>Type:</i> text (max 10 characters). Nullable
	The last used date of the file evidence.

ImportedInstalledInstallerEvidence Table

The ImportedInstalledInstallerEvidence table holds a record of the installer evidence that has been installed on a computer from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
ExternalInstaller	<i>Type</i> : big integer. Key. Nullable
EvidenceID	The identifier used in the source connection for the installer evidence.
ExternalComputerID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the computer that the installer evidence is installed on.
ExternalInstanceID	<i>Type</i> : big integer. Key. Nullable
	The identifier used in the source connection for the instance that the installer evidence is associated with.

 Table 695: Database columns for ImportedInstalledInstallerEvidence table

Database Column	Details
InstallDate	<i>Type:</i> text (max 10 characters). Nullable The install date of the installer evidence.
DiscoveryDate	<i>Type:</i> text (max 10 characters). Nullable The date that the installer evidence was first seen.

ImportedInstalledInstallerEvidenceAttribute Table

The ImportedInstalledInstallerEvidenceAttribute table holds a record of the values of the instance attributes for each installer evidence which is reported to be installed on a computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalInstaller EvidenceID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the installer evidence.
ExternalComputerID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the computer that the installer evidence is installed on.
ExternalInstanceID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the instance that the installer evidence is associated with.
AttributeID	<i>Type:</i> integer. Key The identifier used in the source connection for the instance attribute.
Value	<i>Type:</i> text The value of the instance attribute for the installed installer evidence.

 Table 696: Database columns for ImportedInstalledInstallerEvidenceAttribute table

ImportedInstalledInstallerEvidenceUsage Table

The ImportedInstalledInstallerEvidenceUsage table holds a record of installed evidence being used from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection
	table.
StartDate	Type: text (max 10 characters). Nullable
	The start date of the installer evidence usage tracking period.
ExternalID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the computer that the
	installer evidence is installed on.
ExternalInstallerID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the installer evidence.
ExternalInstanceID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the instance that the installer
	evidence is associated with.
NumberOfSessions	<i>Type:</i> big integer. Nullable
	The number of sessions that the installer evidence was in use during the
	usage tracking period.
LastUsedDate	<i>Type:</i> text (max 10 characters). Nullable
	The last used date of the installed installer evidence.
ExternalUserID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the user that the installer
	evidence was used on.

Table 697: Database columns for ImportedInstalledInstallerEvidenceUsage table

ImportedInstalledWMIEvidence Table

The ImportedInstalledWMIEvidence table holds a record of the WMI evidence that has been installed on a computer from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 698: Database columns for ImportedInstalledWMIEvidence table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
ExternalComputerID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the computer that the WMI evidence is installed on.
ExternalEvidenceID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the WMI evidence.
InstanceName	<i>Type:</i> text (max 256 characters). Key. Nullable
	The name of the WMI class instance used in the source connection for the WMI evidence

ImportedInstallerEvidence Table

The ImportedInstallerEvidence table holds all of the installer evidence which has been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 699: Database columns for ImportedInstallerEvidence table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalInstallerID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the installer evidence.
DisplayName	<i>Type:</i> text (max 256 characters). Key. Nullable The display name of the software as reported by the installer evidence.

Database Column	Details
Version	<i>Type</i> : text (max 72 characters). Key. Nullable
	The version of the software as reported by the installer evidence.
Publisher	<i>Type</i> : text (max 200 characters). Key. Nullable
	The publisher of the software as reported by the installer evidence.
Evidence	<i>Type:</i> text (max 32 characters). Nullable
	Identifier for the type of installer evidence.
ProductCode	<i>Type:</i> text (max 55 characters). Nullable
	The product code of the evidence. This is usually the MSI product code.
AccessModeID	<i>Type</i> : integer. Key. Nullable
	The access mode ID of the file evidence.

ImportedInstallerEvidenceMapping Table

The ImportedInstallerEvidenceMapping table is used by the importer to link imported installer evidence with evidence in the InstallerEvidence table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 700: Database columns for ImportedInstallerEvidenceMapping table

Database Column	Details
InstallerEvidenceID	<i>Type:</i> integer. Key. Nullable The identifier for the installer evidence in the InstallerEvidence table.
ExternalInstallerID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the imported installer evidence.
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier of a data source connection in the ComplianceConnection table.

ImportedInstallerEvidenceRepackageMapping Table

The ImportedInstallerEvidenceRepackageMapping table is used by the importer to map the original and current installer evidence of repackaged softwares as reported by the ISO tag evidence.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier of a data source connection in the ComplianceConnection table.
OrigDisplayName	<i>Type:</i> text (max 256 characters). Key. Nullable The original display name of the repackaged software as reported by the ISO tag evidence.
OrigVersion	<i>Type:</i> text (max 72 characters). Key. Nullable The original version of the repackaged software as reported by the ISO tag evidence.
OrigPublisher	<i>Type:</i> text (max 200 characters). Key. Nullable The original publisher of the repackaged software as reported by the ISO tag evidence.
CurrentDisplayName	<i>Type:</i> text (max 256 characters). Key. Nullable The current display name of the repackaged software as reported by the ISO tag evidence.
CurrentVersion	<i>Type:</i> text (max 72 characters). Key. Nullable The current version of the repackaged software as reported by the ISO tag evidence.
CurrentPublisher	<i>Type:</i> text (max 200 characters). Key. Nullable The current publisher of the repackaged software as reported by the ISO tag evidence.

 Table 701: Database columns for ImportedInstallerEvidenceRepackageMapping table

ImportedInstance Table

The ImportedInstance table holds all of the instances which have been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 702: Database columns for ImportedInstance table

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
InstanceID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the instance.
InstanceName	<i>Type:</i> text (max 256 characters). Nullable The name of the instance.
ParentInstanceID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the parent instance.
EnterpriseManager InstanceID	<i>Type:</i> big integer. Nullable The identifier used in the source connection for the Oracle Enterprise Manager instance.
ExternalComputerID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the computer.
AuditEvidence	<i>Type:</i> binary. Nullable Oracle LMS CVS files in zip archive.
AuditEvidenceDate	<i>Type:</i> datetime. Nullable Oracle LMS CSV files collection date.

ImportedInstanceUser Table

The ImportedInstanceUser table holds all of the end-users of an instance which have been retrieved from the source connections.

Table 703: Database columns for ImportedInstanceUser table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
ExternalID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the instance end-user.
ComputerID	<i>Type</i> : big integer. Key
	The identifier used in the source connection for the computer.
InstanceID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the instance.
AccountStatus	<i>Type:</i> text (max 256 characters). Nullable
	The current status of the end-user account.
CreationDate	<i>Type:</i> datetime. Nullable
	The date and time when the end-user was created.
LastLogonDate	<i>Type:</i> datetime. Nullable
	The date and time when the end-user last logged on to the computer.
DefaultTablespace	<i>Type:</i> text (max 256 characters). Nullable
	The default tablespace for an Oracle end-user.
TempTablespace	<i>Type:</i> text (max 256 characters). Nullable
	The temporary tablespace for an Oracle end-user.
ApplicationID	<i>Type:</i> text (max 400 characters). Key. Nullable
	The Oracle EBS application ID the user has access to.

ImportedMissingComputer Table

The ImportedMissingComputer table holds all of the computers which no longer have inventory records in the source connections.

Table 704: Database columns for ImportedMissingComputer table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the computer.
ComplianceComputerID	<i>Type:</i> integer. Key. Nullable Identifier of the computer in the ComplianceComputer table that this imported computer links to.
IsTerminated	<i>Type:</i> boolean Flag to indicate that this imported computer links to a terminated CloudServiceInstance.

ImportedMissingLicenseUser Table

The ImportedMissingLicenseUser table holds all of the external end-users which no longer have inventory records in the source connections.

Table 705: Database columns fo	r ImportedMissingLicenseUser table
--------------------------------	------------------------------------

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the external end-user.
LicenseUserID	<i>Type:</i> integer. Key. Nullable The identifier for the external end-user in the LicenseUser table.

ImportedMissingUser Table

The ImportedMissingUser table holds all of the end-users which no longer have inventory records in the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 706: Database columns for ImportedMissingUser table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the end-user.
ComplianceUserID	<i>Type:</i> integer. Key. Nullable The identifier for the end-user in the ComplianceUser table.

ImportedPVUVirtualMachineLayer Table

The ImportedPVUVirtualMachineLayer table holds all of the computers which have been retrieved from the IM database.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 707: Database columns for ImportedPVUVirtualMachineLayer table

Database Column	Details
ExternalID	<i>Type</i> : integer. Key The identifier used in the source connection for the end-user.
HostExternalID	<i>Type:</i> integer. Key. Nullable The host item on which the layer resides, or the computer itself. Foreign key to the ImportedPVUVirtualMachineLayer table.

Database Column	Details
ParentExternalID	<i>Type:</i> integer. Key. Nullable
	The parent layer. Foreign key to the ImportedPVUVirtualMachineLayer table
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
FNMPComputerUID	<i>Type:</i> unique identifier. Key. Nullable
	The unique identifier generated for the computer from the IM database. This property should only be populated by the ManageSoft inventory adapter.
VMPoolTypeID	<i>Type:</i> integer. Nullable
	The type of this VM pool. Foreign key to the VMPoolType table.
VMTypeID	<i>Type:</i> integer. Nullable
	The type of this virtual machine. Foreign key to the VMType table.
Name	<i>Type:</i> text (max 256 characters). Nullable
	The name of the layer (host/pool/VM).
Manufacturer	<i>Type:</i> text (max 128 characters). Nullable
	The manufacturer of this layer.
ModelNo	<i>Type:</i> text (max 128 characters). Nullable
	The model number of this layer.
SerialNo	<i>Type:</i> text (max 100 characters). Nullable
	The serial number of this layer.
IsFabricatedHost	<i>Type:</i> boolean
	Is the host generated from the virtual machine inventory.
PartialNumberOfProcessors	<i>Type:</i> decimal. Nullable
	The fractional processor count available to this layer.
ProcessorType	<i>Type:</i> text (max 256 characters). Nullable
	The type of processor in this layer.
MaxClockSpeed	<i>Type:</i> integer. Nullable
	The maximum clock speed (in megahertz) of the fastest processor in this layer.
NumberOfProcessors	<i>Type:</i> decimal. Nullable
	The processor count for this layer.

Database Column	Details
NumberOfCores	<i>Type:</i> decimal. Nullable The core count for this layer.
MaxNumberOfLogical Processors	<i>Type:</i> decimal. Nullable The maximum number of logical processors count for this layer.
NumberOfLogicalProcessors	<i>Type:</i> decimal. Nullable The thread count for this layer.
LicenseSimulationRow TypeID	<i>Type:</i> integer The type of hardware for this item. Foreign key to the LicenseSimulationRowType table.

ImportedProductCodeEvidenceMapping Table

The ImportedProductCodeEvidenceMapping table is used by the importer to link imported product code evidence with evidence in the InstallerEvidence table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 708: Database columns for ImportedProductCodeEvidenceMapping table

Database Column	Details
InstallerEvidenceID	<i>Type:</i> integer. Key. Nullable The identifier for the installer evidence in the InstallerEvidence table.
ExternalInstallerID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the imported installer evidence.
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier of a data source connection in the ComplianceConnection table.

ImportedRelatedInstalledInstallerEvidence Table

The ImportedRelatedInstalledInstallerEvidence table holds parent-child relationship between installer evidence.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 709: Database columns for ImportedRelatedInstalledInstallerEvidence table

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ParentExternal	<i>Type:</i> big integer. Key. Nullable
InstallerEvidenceID	The identifier used in the source connection for the installer evidence.
ParentExternalComputerID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the computer that the installer evidence is installed on.
ChildExternalInstaller	<i>Type:</i> big integer. Key. Nullable
EvidenceID	The identifier used in the source connection for the installer evidence.
ChildExternalComputerID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the computer that the installer evidence is installed on.
IsCharged	<i>Type:</i> boolean. Key. Nullable
	The identifier used in the source connection to determine the pricing relation between parent and child installer evidence (specifies if it is charged = 1 or free = 0).
ConfidenceLevel	<i>Type:</i> integer. Nullable
	Confidence level for each bundled installer evidence (as a percentage).

ImportedRemoteApplication Table

This ImportedRemoteApplication table stores all the published applications from Citrix XenApp/App-V Management Server.

Database Column	Details
FarmName	<i>Type:</i> text (max 256 characters). Nullable The farm from which the application belongs to.
AppID	<i>Type:</i> text (max 256 characters). Key. Nullable The unique identifier for XenApp applications.
AppName	<i>Type:</i> text (max 256 characters). Nullable The application name available in XenApp.
AppFileName	<i>Type:</i> text (max 256 characters). Key. Nullable The application executable name.
AppFileVersion	<i>Type:</i> text (max 256 characters). Key. Nullable The application executable version.
AppFilePublisher	<i>Type:</i> text (max 256 characters). Key. Nullable The application publisher.
AppFileDescription	<i>Type:</i> text (max 256 characters). Key. Nullable The application description.
IsStreamingProfile	<i>Type:</i> boolean. Nullable Whether the application is a streaming profile.
AccessModeID	<i>Type:</i> integer. Key The access mode of the virtual application.

Table 710: Database columns for ImportedRemoteApplication table

ImportedRemoteApplicationAccess Table

This ImportedRemoteApplicationAccess table stores all users/groups with sid who have access to what virtual applications.

Table 711: Database columns for	ImportedRemoteApplicationAccess table
---------------------------------	---------------------------------------

Database Column	Details
FarmName	<i>Type</i> : text (max 256 characters). Nullable The farm from which the virtual application belongs to.

Database Column	Details
AppID	<i>Type:</i> text (max 256 characters). Nullable The unique identifier for virtual applications.
Sid	<i>Type:</i> text (max 256 characters). Nullable The sid that has access to the application.
AccessModeID	<i>Type:</i> integer The access mode of the virtual application.

ImportedRemoteApplicationInstallerData Table

This ImportedRemoteApplicationInstallerData table stores all the MSI information in a streamed profile.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
FarmName	<i>Type</i> : text (max 256 characters). Nullable
	The farm from which the application belongs to.
AppID	<i>Type:</i> text (max 256 characters). Key. Nullable
	The unique identifier for virtual applications.
DisplayName	<i>Type:</i> text (max 256 characters). Key. Nullable
	The application name.
Publisher	<i>Type:</i> text (max 200 characters). Key. Nullable
	The application publisher name.
Version	<i>Type:</i> text (max 72 characters). Key. Nullable
	The application version.
ProductCode	<i>Type:</i> text (max 55 characters). Nullable
	The product code of the evidence. This is usually the MSI product code.
AccessModeID	<i>Type</i> : integer. Key
	The access mode of the virtual application.

 Table 712: Database columns for ImportedRemoteApplicationInstallerData table

ImportedRemoteApplicationServer Table

This ImportedRemoteApplicationServer table stores the servers from which applications are published from.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
FarmName	<i>Type:</i> text (max 256 characters). Nullable
	The farm from which the server belongs to.
AppID	Type: text (max 256 characters). Key. Nullable
	The unique identifier for XenApp applications.
ServerName	Type: text (max 256 characters). Key. Nullable
	The XenApp server the application is available under.
ServerDomainName	Type: text (max 256 characters). Key. Nullable
	The XenApp server domain name.
VDIGroupUUID	<i>Type:</i> unique identifier. Nullable
	The desktop group UUID from which the application is published
AccessModeID	<i>Type:</i> integer. Key
	The access mode of the virtual application.

Table 713: Database columns for ImportedRemoteApplicationServer table

ImportedRemoteServerFileEvidenceMapping Table

The ImportedRemoteServerFileEvidenceMapping table stores the mapping between file evidence on servers to software titles

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.

Table 714: Database columns for ImportedRemoteServerFileEvidenceMapping table

Database Column	Details
ExternalServerID	<i>Type:</i> big integer. Key. Nullable The External Server ID for the remote server.
ExternalFileID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the file evidence.
SoftwareTitleID	<i>Type</i> : integer. Nullable The software title ID corresponding to the piece of file evidence.

ImportedRemoteUsage Table

This ImportedRemoteUsage table stores the remote usage for applications in remote hosting environments

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 715: Database columns for ImportedRemoteUsage table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
ExternalServerID	<i>Type:</i> big integer. Key. Nullable
	The External Server ID for the remote server.
ExternalClientID	<i>Type:</i> big integer. Nullable
	The External client ID for the remote client machine.
ExternalFileID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the file evidence.
ExternalInstaller	<i>Type</i> : big integer. Nullable
EvidenceID	The identifier used in the source connection for the installer evidence.
ExternalUserID	<i>Type:</i> big integer. Nullable
	The identifier used in the source connection for the end-user that has used the file evidence.
StartDate	<i>Type</i> : text (max 10 characters). Nullable
	The start date of the remote usage tracking period.

Database Column	Details
ActiveTimeInSeconds	<i>Type:</i> big integer. Nullable
	The number of seconds that the file evidence was in use during the usage tracking period.
NumberOfSessions	<i>Type:</i> big integer. Nullable
	The number of sessions that the file evidence was in use during the usage tracking period.
AccessModeID	<i>Type:</i> integer. Nullable
	The access mode ID for the remote usage.

ImportedRemoteUserToApplicationAccess Table

The ImportedRemoteUserToApplicationAccess table stores the applications that remote users have access to

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection table.
ExternalServerID	<i>Type:</i> big integer. Key. Nullable
	The External Server ID for the remote server.
VDIGroupUUID	<i>Type</i> : unique identifier. Nullable
	The desktop group UUID from which the application is published
ExternalFileID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the file evidence.
ExternalInstaller	<i>Type:</i> big integer. Key. Nullable
EvidenceID	The identifier used in the source connection for the installer evidence.
ExternalUserID	<i>Type</i> : big integer. Key. Nullable
	The identifier used in the source connection for the end-user that has used the file evidence.

Table 716: Database columns for ImportedRemoteUserToApplicationAccess table

Database Column	Details
AccessModeID	<i>Type:</i> integer. Key. Nullable The access mode ID for the remote application access.
LastUsedDate	<i>Type:</i> datetime. Key. Nullable The last time the remote application was used by the user.

ImportedSite Table

The ImportedSubnet contains sites imported from Microsoft Active Directory

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 717: Database colun	nns for ImportedSite table
---------------------------	----------------------------

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier for a data source connection in the ComplianceConnection table.
Name	<i>Type:</i> text (max 256 characters). Key The site's name.
AutoPopulated	<i>Type:</i> boolean Is the site auto populated at source?
Enabled	<i>Type:</i> boolean Is the site enabled?

ImportedSiteSubnet Table

The ImportedSiteSubnet contains sites and subnets imported from Microsoft Active Directory

Table 718: Database columns for ImportedSiteSubnet table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier for a data source connection in the ComplianceConnection table.
SiteName	<i>Type:</i> text (max 256 characters). Key The site's name.
IPSubnet	<i>Type:</i> text (max 64 characters). Key The IP subnet.
IPSubnetBits	<i>Type</i> : tiny integer. Key The IP subnet mask in CIDR notation.
AutoPopulated	<i>Type</i> : boolean Is the subnet auto populated at source?
Enabled	<i>Type:</i> boolean Is the subnet enabled?

ImportedSoftwareLicense Table

The ImportedSoftwareLicense table holds all of the licenses which have been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 719: Database columns for ImportedSoftwareLicense table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalLicenseID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the license.
LicenseName	<i>Type:</i> text (max 256 characters). Nullable The name of the license.

Database Column	Details
SoftwareLicenseTypeID	<i>Type:</i> integer. Nullable
	The license type ID of the license.
EntitlementCount	<i>Type:</i> integer. Nullable
	The number of entitlements for the license.
IsSubscription	<i>Type:</i> boolean
	Indicates whether or not the license is a subscription license.
ExpiryDate	<i>Type:</i> datetime. Nullable
	The expiry date of a subscription license.
PartNo	<i>Type:</i> text (max 100 characters). Nullable
	The publisher's part number for this license.
SoftwareLicenseID	<i>Type:</i> integer. Nullable
	Identifier of the license in the SoftwareLicense table that this imported
	license links to. This is populated by the import process and does not need to be provided by the source connections.
VirtualApplication	<i>Type:</i> integer. Nullable
AccessMaximumUsagePeriod	This is a rule for virtual application access. This is used in conjunction with the AllowExternalRoamingUse. For Device licenses, a license will consume 1 entitlement per each user device when used in period specified here. For user licenses, if 1, this license will consume only when used in period specified here.
PublisherName	<i>Type:</i> text (max 64 characters). Nullable
	The name of the publisher.
Version	<i>Type:</i> text (max 60 characters). Nullable
	The name of the Version.
Edition	<i>Type:</i> text (max 60 characters). Nullable
	The name of the Edition.
TrueUp	<i>Type:</i> boolean
	Set this field to True if the license is a true-up license (and so never goes into at risk).
UnlimitedConsumption	<i>Type:</i> boolean
	Set this field to True if the license is a unlimited license (and so never goes into at risk).

ImportedSoftwareLicenseAllocation Table

The ImportedSoftwareLicenseAllocation table holds the links between licenses and end-users which have been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalLicenseID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the license. Foreign key to the ImportedSoftwareLicense table.
ExternalUserID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the user. Foreign key to the ImportedUser table.
ExternalAccessingUserID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the accessing user. Foreign key to the ImportedAccessingUser table.

Table 720: Database columns for ImportedSoftwareLicenseAllocation table

ImportedSoftwareTitle Table

The ImportedSoftwareTitle table contains the application titles retrieved from the source connection.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.

Database Column	Details
ExternalSoftwareTitleID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for a Software title.
FullName	<i>Type:</i> text (max 512 characters). Nullable Software title.
ProductName	<i>Type:</i> text (max 200 characters). Nullable Software title product name.
PublisherName	<i>Type:</i> text (max 200 characters). Nullable Software title publisher.
VersionName	<i>Type:</i> text (max 50 characters). Nullable Software title version.
EditionName	<i>Type:</i> text (max 50 characters). Nullable Software title edition.
SoftwareTitleID	<i>Type:</i> integer. Nullable Identifier of the software title in the SoftwareTitle table that this software title links to. This is populated by the import process and does not need to be provided by the source connections.

ImportedSoftwareTitleAccessEvidence Table

The ImportedSoftwareTitleAccessEvidence table maps ClientAccessEvidence to SoftwareTitles retrieved from the source connection.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 722: Database columns for ImportedSoftwareTitleAccessEvidence table

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalSoftwareTitleID	<i>Type:</i> big integer. Key A unique identifier for a software record. Foreign key to the ImportedSoftwareTitle table.

Database Column	Details
ExternalClientAccess	<i>Type:</i> big integer. Key
EvidenceID	A unique identifier for a client access evidence record. Foreign key to the ImportedClientAccessEvidence table.

ImportedSoftwareTitleLicense Table

The ImportedSoftwareTitleLicense table maps SoftwareLicenses to SoftwareTitles retrieved from the source connection.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalSoftwareTitleID	<i>Type:</i> big integer. Key A unique identifier for a software title record. Foreign key to the ImportedSoftwareTitle table.
ExternalSoftwareLicenseID	<i>Type</i> : big integer. Key A unique identifier for a software license record. Foreign key to the ImportedSoftwareLicense table.

ImportedStringMapping Table

The ImportedStringMapping table is used by the importer to keep a history of entities that have been imported from a data source that uses string IDs rather than integer IDs.

Table 724: Database columns for ImportedStringMapping table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier of a data source connection in the ComplianceConnection table.
Category	<i>Type:</i> text (max 100 characters). Key The importer category applicable for this ID space.
OriginalID	<i>Type:</i> text (max 400 characters). Key The ID of this entity in the source database.
MappedID	<i>Type:</i> big integer. Generated ID A unique integer value we can use as an 'external ID' safely in the ImportedComputer table.

ImportedStringMappingLatin1CS Table

The ImportedStringMappingLatin1CS table is used by the importer to keep a history of entities that have been imported from a data source that uses case sensitive string IDs rather than integer IDs.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 725: Database columns for ImportedStringMappingLatin1CS table
--

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key
	The identifier of a data source connection in the ComplianceConnection table.
Category	<i>Type:</i> text (max 100 characters). Key
	The importer category applicable for this ID space.
OriginalID	<i>Type:</i> text (max 400 characters). Key
	The ID of this entity in the source database.
MappedID	<i>Type:</i> big integer. Generated ID
	A unique integer value we can use as an 'external ID' safely in the ImportedComputer table.

Ē

ImportedUser Table

The ImportedUser table holds all of the end-users which have been retrieved from the source connections.

Table 726: Database columns for	or ImportedUser table
---------------------------------	-----------------------

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the end-user.
UserName	<i>Type:</i> text (max 64 characters). Nullable The account name of the end-user.
Domain	<i>Type</i> : text (max 100 characters). Key. Nullable The domain of the end-user.
SAMAccountName	<i>Type:</i> text (max 64 characters). Key. Nullable The SAM account name of the end-user.
InventoryAgent	<i>Type:</i> text (max 64 characters). Nullable The name of the person or tool that performed the last inventory. For imported spreadsheets, you may wish to include the name of the person preparing the data, in case there is subsequent follow-up required.
FirstName	<i>Type:</i> text (max 128 characters). Nullable The first name of the end-user.
LastName	<i>Type:</i> text (max 128 characters). Nullable The last name or surname of the end-user.
Email	<i>Type:</i> text (max 200 characters). Nullable The email address of the end-user.
EmployeeNumber	<i>Type</i> : text (max 128 characters). Nullable The employee number of the end-user.
CostCenter	<i>Type:</i> text (max 128 characters). Nullable The cost center of the end-user, as reported in SAP. Does not necessarily map to a cost centre in the GroupEx table.

Database Column	Details
ComplianceUserID	<i>Type:</i> integer. Nullable
	Identifier of the end-user in the ComplianceUser table that this imported
	user links to. This is populated by the import process and does not need to be provided by the source connections.
ComplianceDomainID	<i>Type:</i> integer. Nullable
	Identifier of the domain in the ComplianceDomain table that this end-user
	belongs to. This is populated by the import process and does not need to be provided by the source connections.
IsBlacklisted	<i>Type:</i> boolean. Key
	This is populated by the import process and does not need to be provided by the source connections. The field is set to True if the end-user matches a record from the UserNameBlacklist table, meaning the account should not be included in compliance calculations.
MapUsingEmailAddress	<i>Type:</i> boolean
	Indicates whether or not the user's email address should be used to try and map it to an existing ComplianceUser record.

ImportedVDI Table

The ImportedVDIUser table stores the list of VDI devices, their master VM template and the VDI group the VDI device resides under.

Table 727: Database columns for ImportedVDI table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer The identifier of a data source connection in the ComplianceConnection table.
ExternalDeviceID	<i>Type</i> : big integer. Nullable The identifier used in the source connection for the VDI device.
ComputerName	<i>Type:</i> text (max 64 characters). Nullable The computer name of the VDI.

Database Column	Details
Domain	<i>Type:</i> text (max 100 characters). Nullable
	The domain name of the VDI device.
VDIGroupName	Type: text (max 100 characters). Key. Nullable
	The VDI group the VDI device belongs to.
TemplateName	<i>Type:</i> text (max 100 characters). Key. Nullable
	The VDI template the VDI is cloned from.
SiteName	<i>Type:</i> text (max 256 characters). Key. Nullable
	The site name of the VDI.
BrokerType	<i>Type:</i> text (max 64 characters). Key. Nullable
	The broker type of the VDI device.
IsPersistent	<i>Type:</i> boolean. Key. Nullable
	Determine whether the VDI device is a persistent VDI device.
VDIGroupUUID	<i>Type:</i> unique identifier. Nullable
	The group UUID the VDI device belongs to.
ApplicationDeliveryOnly	<i>Type:</i> boolean. Nullable
	Determines whether the VDI device is used only to server applications.

ImportedVDIEndPointAccess Table

The ImportedVDIEndPointAccess table stores the list of users on end-points that have accessed VDI devices.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 728: Database columns for ImportedVDIEndPointAccess table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Nullable The identifier of a data source connection in the ComplianceConnection table.
ExternalDeviceID	<i>Type:</i> big integer. Nullable The identifier used in the source connection for the device.
ExternalUserID	<i>Type:</i> big integer. Nullable The identifier used in the source connection for the user.

Database Column	Details
VDIDeviceName	<i>Type:</i> text (max 64 characters). Nullable
	The computer name of the VDI device.
VDIDeviceDomain	<i>Type:</i> text (max 100 characters). Nullable
	The domain name of the VDI device.
VDITemplateName	<i>Type</i> : text (max 256 characters). Nullable
	The VDI template the VDI device was cloned from.
LogonTime	<i>Type:</i> datetime. Key. Nullable
	The logon time of the VDI device by the user.
BrokerType	<i>Type:</i> text (max 64 characters). Nullable
	The broker type of the VDI device.

ImportedVDITemplate Table

The ImportedVDITemplate table stores the list of VDI templates.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 729: Database columns for ImportedVDITemplate table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer The identifier of a data source connection in the ComplianceConnection table.
TemplateName	<i>Type:</i> text (max 64 characters). Key. Nullable The template name of the VDI template.
SiteName	<i>Type:</i> text (max 256 characters). Key. Nullable The site name of the VDI.
BrokerType	<i>Type:</i> text (max 64 characters). Key. Nullable The broker type of the VDI template.
VDITemplateExternalID	<i>Type:</i> big integer. Nullable The ExternalID of the VDI template in the ImportedComputer table.

ImportedVDIUser Table

The ImportedVDIUser table stores the list of users that have been granted access to VDI groups.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier of a data source connection in the ComplianceConnection table.
ExternalUserID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the end-user that has access to the VDI.
VDIGroupName	<i>Type:</i> text (max 100 characters). Nullable The VDI group the end-user has access to.
SiteName	<i>Type:</i> text (max 256 characters). Nullable The site name of the VDI.
BrokerType	<i>Type</i> : text (max 64 characters). Nullable The broker type of the VDI for the end user.

ImportedVMHostDatastore Table

The ImportedVMHostDatastore table holds all of the datastore objects available to virtual machines hosts.

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.

Database Column	Details
ExternalComputerID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the virtual machine's host computer ID.
Datastore	<i>Type:</i> text (max 64 characters). Nullable The datastore availaboe on the VM host.

ImportedVMHostManagedBySoftware Table

The ImportedVMHostManagedBySoftware table contains relationships between installer evidence of management software and VM hosts it manages.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key The identifier for a data source connection in the ComplianceConnection table.
ExternalInstallerID	<i>Type:</i> big integer. Key The identifier used in the source connection for an installer evidence of management software.
ExternalComputerID	<i>Type:</i> big integer. Key The identifier used in the source connection for the computer that the management software installer evidence is installed on.
RelationType	<i>Type:</i> text (max 100 characters). Key Identifier for the type of relation, to be matched against ImporterString column of RelationType table.
ExternalVMHostID	<i>Type:</i> big integer. Key The identifier used in the source connection for the VM host computer that is managed by a management software.

Table 732: Database columns for ImportedVMHostManagedBySoftware table

ImportedVMHostProperty Table

The ImportedVMHostProperty table holds additional properties for virtual machines hosts which have been retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
ExternalComputerID	<i>Type</i> : big integer. Key. Nullable The identifier used in the source connection for the virtual machine's host computer ID.
VMTypeID	<i>Type:</i> big integer. Nullable The VMHost technology type. Foreign key to the VMType table.
HypervisorVersion	<i>Type:</i> text (max 32 characters). Nullable The hypervisor version of the VM host.
HyperThreadingEnabled	<i>Type</i> : boolean. Nullable Set this to True if this VM host has hyper threading enabled.
PowerState	<i>Type</i> : text (max 32 characters). Nullable The power state of the VM host.
ManagingSoftwareVersion	<i>Type</i> : text (max 32 characters). Nullable The version of the managing software for the VM host.
ConnectionState	<i>Type</i> : text (max 32 characters). Nullable The connection state of the VM host to the managing software envrionment.
InstanceType	<i>Type:</i> text (max 256 characters). Nullable Cloud provider instance type.
Region	<i>Type:</i> text (max 256 characters). Nullable Region of the host.
AvailabilityZone	<i>Type</i> : text (max 256 characters). Nullable Location of the host.

Table 733: Database columns for ImportedVMHostProperty table

Database Column	Details
AllocationTime	<i>Type:</i> datetime. Nullable The time that the Dedicated Host was allocated.
ReleaseTime	<i>Type:</i> datetime. Nullable The time that the Dedicated Host was released.
Autoplacement	<i>Type:</i> boolean. Nullable Whether auto-placement is on or off.

ImportedVMPool Table

The ImportedVMPool table holds all of the virtual machine pools which have been retrieved from the source connections and the number of processors and cores that are assigned to each pool.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
PoolName	<i>Type:</i> text (max 100 characters). Key. Nullable The name of the pool.
VCObjectID	<i>Type</i> : text (max 256 characters). Nullable The identifier of the virtual machine folder in Virtal Center.
ParentName	<i>Type</i> : text (max 100 characters). Nullable The name of the parent pool. This is the PoolName property for the parent pool.
PoolFriendlyName	<i>Type:</i> text (max 256 characters). Nullable The friendly name of the pool.
HostComputerID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the computer which is hosting the pool.
ObjectType	<i>Type:</i> text (max 256 characters). Key. Nullable The type of pool.
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.

Table 734: Database columns for ImportedVMPool table

Database Column	Details
ParentObjectType	<i>Type:</i> text (max 256 characters). Nullable
	The type of pool of the parent.
NumberOfProcessors	<i>Type</i> : decimal. Nullable
	The number of processors available to this pool.
NumberOfCores	<i>Type</i> : decimal. Nullable
	The number of cores available to this pool.
NumberOfLogicalProcessors	<i>Type</i> : integer. Nullable
	The active number of threads used by this pool.
MaxNumberOfLogical	<i>Type:</i> integer. Nullable
Processors	Maximum number of threads allocated to this pool of type processor set.

ImportedVirtualMachine Table

The ImportedVirtualMachine table holds all of the virtual machines which have been retrieved from the source connections.

Database Column	Details
HostComputerID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the virtual machine's host computer.
VirtualMachineType	<i>Type:</i> text (max 100 characters). Nullable The type of virtual machine.
VMName	<i>Type:</i> text (max 256 characters). Nullable The name of the virtual machine.
VCObjectID	<i>Type:</i> text (max 256 characters). Nullable The identifier of the virtual machine in Virtual Center.
FriendlyName	<i>Type:</i> text (max 256 characters). Nullable The friendly name of the virtual machine.

Database Column	Details
ComputerName	<i>Type:</i> text (max 256 characters). Nullable
	The computer name of the virtual machine.
UUID	<i>Type:</i> text (max 256 characters). Key. Nullable
	The UUID of the virtual machine.
TotalMemory	<i>Type:</i> big integer. Nullable
	The total RAM in the computer, in bytes.
PoolName	<i>Type:</i> text (max 100 characters). Nullable
	The name of the pool that the virtual machine belongs to.
CPUUsage	<i>Type:</i> integer. Nullable
	The maximum CPU usage of the virtual machine (MHz).
MemoryUsage	<i>Type:</i> big integer. Nullable
	The maximum memory usage of the virtual machine (bytes).
MaxNumberOfLogical	<i>Type:</i> decimal. Nullable
Processors	The maximum number of threads this VM is allowed to access.
VMEnabledStateID	<i>Type:</i> integer. Nullable
	The state of the machine (powered on, off, etc).
ModelNo	Type: text (max 128 characters). Nullable
	The model number of the virtual machine.

Database Column	Details
Manufacturer	<i>Type:</i> text (max 128 characters). Nullable The manufacturer of the computer hardware. Some examples include:
	 On Windows, the SMBios manufacturer (the WMI Manufacturer property of the 'Win32_ComputerSystem' class).
	 On Linux, 'Manufacturer' in the 'System Information' section resulting from the 'dmidecode' command. Sample command: 'dmidecode -s system-manufacturer'
	 On Solaris x86, as for Linux, with failovers first to 'sysinfo SI_HW_PROVIDER' and then to 'ModelNo'.
	 On Solaris SPARC, the 'sysinfo SI_HW_PROVIDER'. Typically this value is 'Sun_Microsystems' or, more recently, 'Oracle Corporation'. Failover to the 'ModelNo'.
	• On HP-UX, the string literal 'HP'.
	On AIX, the 'modelname' system attribute preceding the comma
	character. For example, if the 'modelname' system attribute is
	'IBM,8202-E4B', then use 'IBM'. This value is typically 'IBM'.
NumberOfProcessors	<i>Type</i> : integer. Nullable
	The number of processors in the virtual machine.
ProcessorType	<i>Type:</i> text (max 256 characters). Nullable
	The type of processor in the virtual machine.
NumberOfHardDrives	<i>Type:</i> integer. Nullable
	The number of hard drives in the virtual machine.
NumberOfNetworkCards	<i>Type:</i> integer. Nullable
	The number of network cards in the virtual machine.
InventoryAgent	<i>Type:</i> text (max 64 characters). Nullable
, 0	The name of the person or tool that performed the last inventory.
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable
	The identifier for a data source connection in the ComplianceConnection
	table.
VMLocation	<i>Type:</i> text (max 256 characters). Nullable
	Location of the virtual machine on the file system.
GuestFullName	<i>Type:</i> text (max 256 characters). Nullable
GuestFullName	Type. text (max 250 characters). Nullable

Database Column	Details
VMComputerID	<i>Type:</i> big integer. Key. Nullable
	The identifier used in the source connection for the virtual machine's computer.
PoolType	<i>Type:</i> text (max 100 characters). Nullable
	The type of the pool that the virtual machine belongs to.
ZoneResourceManagement	<i>Type:</i> text (max 100 characters). Nullable
MethodType	Resource management method used for this virtual machine in Solaris Zone.
AffinityEnabled	<i>Type:</i> boolean
	Set this to True if this VM is unable to move to different host computers.
CPUAffinity	<i>Type</i> : text (max 256 characters). Nullable
	Contains the CPU Affinity value for virtual machine(Host Logical Processors)
CoreAffinity	<i>Type:</i> text (max 256 characters). Nullable
	Contains the Core Affinity value for virtual machine
PartitionID	<i>Type:</i> text (max 100 characters). Nullable
	Partition ID generated and used by the managing virtualization platform
PartitionNumber	<i>Type:</i> integer. Nullable
	Number of this partition
FullComputerName	<i>Type:</i> text (max 256 characters). Nullable
	The virtual machine full computer name as determined by the VM guest managing tool.
IPAddress	<i>Type:</i> text (max 256 characters). Nullable
	IP Address of the virtual machine as determined by the VM guest managing tool.

ImportedWMIEvidence Table

The ImportedWMIEvidence table holds all of the WMI evidence which has been retrieved from the source connections.

Table 736: Database columns for ImportedWMIEvidence table

Database Column	Details	
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.	
ClassName	<i>Type:</i> text (max 50 characters). Key. Nullable The WMI class name of the WMI evidence.	
PropertyName	<i>Type:</i> text (max 50 characters). Key. Nullable The WMI property name of the WMI evidence.	
PropertyValue	<i>Type:</i> text (max 256 characters). Key. Nullable The value of the property of the WMI evidence.	
ExternalEvidenceID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the WMI evidence.	

ImportedWMIEvidenceRuleMapping Table

The ImportedWMIEvidenceRuleMapping table is used by the importer to link imported WMI evidence with evidence in the WMIEvidence table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
EvidenceRuleID	<i>Type:</i> integer. Nullable The identifier for the WMI evidence in the WMIEvidence table.
ExternalEvidenceID	<i>Type:</i> big integer. Key. Nullable The identifier used in the source connection for the imported WMI evidence.
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier of a data source connection in the ComplianceConnection table.

Table 737: Database columns for ImportedWMIEvidenceRuleMapping table

ImporterValueMapping Table

The ImporterValueMapping table stores mapping pairs for use by importer tasks. It serves as a basic lookup translation table that is not connection-specific.

Table 738: Database columns for ImporterValueMapping table	Table 738: Da	atabase col	umns for	ImporterVal	lueMapping table
--	---------------	-------------	----------	-------------	------------------

Database Column	Details	
ImporterValueMappingID	<i>Type</i> : integer. Key. Generated ID Unique auto-incrementing identifier.	
Category	<i>Type:</i> text (max 100 characters). Key The importer section applicable for this key, uses dotted notation: e.g. "MobileDevice.Apple.Model".	
FromValue	<i>Type</i> : text (max 256 characters). Key The value to translate.	
ToValue	<i>Type</i> : text (max 256 characters). Nullable The required destination value for the Category/FromValue pair.	

InstalledApplications Table

The InstalledApplications table is populated by the import process to track which software has been installed.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details	
ComplianceComputerID	<i>Type:</i> integer. Key The identifier for the computer in the ComplianceComputer table that the software is installed on.	
SoftwareTitleID	<i>Type:</i> integer. Key The identifier for the software in the SoftwareTitle table that is installed.	
InstanceName	<i>Type:</i> text (max 256 characters). Nullable The name of the instance that the software installation is associated with.	

Table 739: Database columns for InstalledApplications table

Database Column	Details
InstallerEvidence	<i>Type:</i> boolean
	This field is True if the installation is reported due to installer evidence.
FileEvidence	<i>Type:</i> boolean
	This field is True if the installation is reported due to file evidence.
WMIEvidence	<i>Type:</i> boolean
	This field is True if the installation is reported due to WMI evidence.
AccessModeID	<i>Type:</i> integer
	The access mode for which the installed application has been accessed.
	Foreign key to the AccessMode table.
IsACL	<i>Type:</i> boolean
	Determines whether the access mode record came from ACL data.

RelatedInstalledApplications Table

The RelatedInstalledApplications table is populated by the import process to track which relationship between applications.

Database Column	Details	
ParentCompliance ComputerID	<i>Type:</i> integer. Key The parent identifier for the computer in the ComplianceComputer table that the software is installed on.	
ParentSoftwareTitleID	<i>Type:</i> integer. Key The parent identifier for the software in the SoftwareTitle table that is installed.	
ParentAccessModeID	<i>Type:</i> integer. Key The access mode for which the installed application has been accessed. Foreign key to the AccessMode table.	
ChildComplianceComputerID	<i>Type:</i> integer. Key The child identifier for the computer in the ComplianceComputer table that the software is installed on.	

Database Column	Details
ChildSoftwareTitleID	<i>Type:</i> integer. Key The child identifier for the software in the SoftwareTitle table that is installed.
ChildAccessModeID	<i>Type:</i> integer. Key The access mode for which the installed application has been accessed. Foreign key to the AccessMode table.
IsCharged	<i>Type:</i> boolean. Key The identifier used in the source connection to determine the pricing relation between parent and child installer evidence (specifies if it is charged or free).
ConfidenceLevel	<i>Type:</i> integer. Nullable Confidence level for each bundled installer evidence (as a percentage).

Compliance.InventoryWriter.Matching Tables

The complete set of database tables documented here includes:

- ComplianceComputerMatchResult table (see ComplianceComputerMatchResult Table)
- ImportedComputerMatchResult table (see ImportedComputerMatchResult Table)
- ImportedSoftwareBundleInstallerEvidence table (see ImportedSoftwareBundleInstallerEvidence Table)
- ImportedVirtualMachineMatchResult table (see ImportedVirtualMachineMatchResult Table)
- VirtualMachineMatchResult table (see VirtualMachineMatchResult Table)

ComplianceComputerMatchResult Table

The ComplianceComputerMatchResult table stores the results of performing matching between ImportedComputers and ComplianceComputers.

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key
	The identifier for a data source connection in the ComplianceConnection table that supplied the ImportedComputer.
ExternalID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the ImportedComputer.
ComplianceComputerID	<i>Type:</i> integer. Key
	Identifier of the computer in the ComplianceComputer table that this
	ImportedComputer links to.
MatchingRule	<i>Type:</i> text (max 128 characters)
	The matching rule which determined the match between this
	ImportedComputer and ComplianceComputer.

Table 741: Database columns for ComplianceComputerMatchResult table

ImportedComputerMatchResult Table

The ImportedComputerMatchResult table stores the results of performing matching between ImportedComputers.

Database Column	Details
PrimaryCompliance	<i>Type</i> : integer. Key
ConnectionID	The identifier for a data source connection in the ComplianceConnection
	table that supplied the primary ImportedComputer.
PrimaryExternalID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the primary
	ImportedComputer.
MatchedCompliance	<i>Type:</i> integer. Key. Nullable
ConnectionID	The identifier for a data source connection in the ComplianceConnection
	table that supplied the matched ImportedComputer.

Database Column	Details
MatchedExternalID	<i>Type</i> : big integer. Key. Nullable The identifier used in the source connection for the matched ImportedComputer.
MatchingRule	<i>Type:</i> text (max 128 characters) The matching rule which determined the match between these ImportedComputers.

ImportedSoftwareBundleInstallerEvidence Table

The ImportedSoftwareBundleInstallerEvidence table holds software bundle to installer evidence information retrieved from the source connections.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComplianceConnectionID	<i>Type</i> : integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table.
BundleName	<i>Type:</i> text (max 256 characters). Key. Nullable Bundle name
BundlePublisher	<i>Type:</i> text (max 64 characters). Key. Nullable Bundle's publisher
EvidenceDisplayName	<i>Type:</i> text (max 256 characters). Key. Nullable The version of the software as reported by the installer evidence.
EvidenceVersion	<i>Type</i> : text (max 72 characters). Key. Nullable Identifier for the type of installer evidence.
EvidencePublisher	<i>Type</i> : text (max 200 characters). Key. Nullable The publisher of the software as reported by the installer evidence.
Supplementary	<i>Type</i> : boolean Whether this installer evidence on this bundle is supplementary (counted for consumption) or not.

 Table 743: Database columns for ImportedSoftwareBundleInstallerEvidence table

Database Column	Details
MeasuredForCompliance	<i>Type</i> : boolean
	Whether this installer evidence on this bundle is measured for compliance risks.
ProductRatio	<i>Type:</i> integer
	If this installer evidence is supplementary on the bundle, the number of entitlements consumed related to the entitlements consumed for the parent product.
ParentProductRatio	<i>Type</i> : integer
	If this installer evidence is supplementary on the bundle, the number of entitlements consumed related to the entitlements consumed for the supplementary product.
DowngradeEnabled	<i>Type</i> : boolean
	If this field is True, this bundle can cover previous releases, or lower editions,
	of applications linked to this license. If this field is False (the default), there
	is no downgrade right conferred by this license.
DowngradeToVersion	<i>Type:</i> boolean
	If this field is True, the bundle covers previous releases (with the same
	edition) of the primary application. If this field is False (the default), earlier
	versions of the primary application are not covered by downgrade rights.
DowngradeToVersionID	<i>Type:</i> integer. Nullable
	If the previous field is True and the value of this field is NULL, downgrade
	rights cover all earlier releases (with the same edition) of the primary application. If not NULL, downgrade rights cover all versions of the primary application down to and including this version. Foreign key to the SoftwareTitleVersion table.
DowngradeToEdition	<i>Type</i> : boolean
	If this field is True, the license covers lower editions (with the same version)
	of the primary application. If this field is False (the default), lower editions
	of the primary application are not covered by downgrade rights.
DowngradeToEditionID	<i>Type</i> : integer. Nullable
-	If the previous field is True and the value of this field is NULL, downgrade
	rights cover all lower editions (with the same version) of the primary
	application. If not NULL, downgrade rights cover all editions of the primary
	application down to and including this edition. Foreign key to the
	SoftwareTitleEdition table.

Database Column	Details
UpgradeEnabled	<i>Type:</i> boolean If this field is True, the license can cover future releases (with the same edition) of the primary application. If this bit is False (the default), there is no upgrade right conferred by this license.
UpgradeToVersion	<i>Type:</i> boolean If this field is True, the license covers later releases (with the same edition) of the primary application. If this field is False (the default), later versions of the primary application are not covered by upgrade rights.
UpgradeToVersionID	<i>Type:</i> integer. Nullable If the previous field is True and the value of this field is NULL, upgrade rights cover all later version (with the same edition) of the primary application. If not NULL, upgrade rights cover all versions of the primary application up to and including this version. Foreign key to the SoftwareTitleEdition table.
UpgradeUntil	<i>Type</i> : boolean If this bit is 1, the upgrade right covers future releases of applications that get linked to this license, provided that the release date of each version is before (or on) a specified date. If this bit is zero (the default), the upgrade right is not date limited.
UpgradeUntilDate	<i>Type:</i> datetime. Nullable If this field is set, only applications released before this date are covered by upgrade rights.

ImportedVirtualMachineMatchResult Table

The ImportedVirtualMachineMatchResult table stores the results of performing matching between ImportedVirtualMachines.

Database Column	Details
PrimaryCompliance ConnectionID	<i>Type</i> : integer. Key The identifier for a data source connection in the ComplianceConnection table that supplied the primary ImportedVirtualMachine.

Database Column	Details
PrimaryVMComputerID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the primary ImportedVirtualMachine.
PrimaryHostComputerID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the primary host ImportedVirtualMachine.
MatchedCompliance	<i>Type:</i> integer. Key
ConnectionID	The identifier for a data source connection in the ComplianceConnection
	table that supplied the matched ImportedVirtualMachine.
MatchedVMComputerID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the matched
	ImportedVirtualMachine.
MatchedHostComputerID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the matched host ImportedVirtualMachine.
MatchingRule	<i>Type:</i> text (max 128 characters)
	The matching rule which determined the match between these ImportedVirtualMachines.
NeedsCreation	<i>Type:</i> boolean
	Whether this ImportedVirtualMachine is awaiting creation as a
	VirtualMachine or not.

VirtualMachineMatchResult Table

The VirtualMachineMatchResult table stores the results of performing matching between ImportedVirtualMachines and VirtualMachines.

Table 745: Database columns for VirtualMachineMatchResult table

Database Column	Details
ComplianceConnectionID	<i>Type:</i> integer. Key
	The identifier for a data source connection in the ComplianceConnection
	table that supplied the ImportedVirtualMachine.
VMComputerID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the
	ImportedVirtualMachine.
HostComputerID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the host of the
	ImportedVirtualMachine.
VirtualMachineID	<i>Type:</i> integer. Key
	Identifier of the virtual machine in the VirtualMachine table that this
	ImportedVirtualMachine links to.
MatchingRule	<i>Type:</i> text (max 128 characters)
	The matching rule which determined the match between these
	VirtualMachines.

Compliance.InventoryReader.CloudServiceData Tables

The complete set of database tables documented here includes:

• ImportedCloudServiceInstance table (see ImportedCloudServiceInstance Table)

ImportedCloudServiceInstance Table

The ImportedCloudServiceInstance table holds all of the data which have been retrieved from the cloud instance.

Database Column Details ComplianceConnectionID Type: integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table. ExternalComputerID Type: big integer. Key. Nullable The identifier used in the source connection for the computer. HostID Type: text (max 256 characters). Nullable The ID of the dedicated host instance. HostComputerID Type: big integer. Key. Nullable The identifier used in the source connection for the CloudServiceInstance's host computer. CloudServiceProvider Type: text (max 256 characters). Key. Nullable The cloud service provider for this instance. Foreign key to the CloudServiceProvider table. InstanceCloudID Type: text (max 256 characters). Key The ID of the cloud instance. Type: text (max 256 characters). Nullable InstanceAffinity The affinity setting for the instance on the Dedicated Host. Type: text (max 256 characters). Nullable ImageID The ID of the image used to launch the instance. LaunchTime Type: datetime. Nullable The time the cloud instance was launched or the Reserved Instance started. NetworkID Type: text (max 256 characters). Nullable The ID of the Virtual Private Cloud. MACAddress Type: text (max 256 characters). Key. Nullable The MAC address of the computer. This may be a comma-separated list if there is more than one active network adapter in the system. Do not include inactive network adapters and network adapters with invalid MAC addresses. Type: text (max 256 characters). Nullable LifecycleMode The time the instance was launched. ExpiryTime Type: datetime. Nullable The time when the Reserved Instance expires.

Table 746: Database columns for ImportedCloudServiceInstance table

Database Column	Details
InstanceCount	<i>Type</i> : integer. Nullable
	The number of reservations purchased.
OfferingClass	<i>Type:</i> text (max 256 characters). Nullable
	The offering class of the Reserved Instance.
OfferingType	<i>Type:</i> text (max 256 characters). Nullable
	The Reserved Instance offering type.
Scope	<i>Type:</i> text (max 256 characters). Nullable
	The scope of the Reserved Instance.
Account	<i>Type:</i> text (max 256 characters). Nullable
	The Account that is used to create the instance.
CoreCount	<i>Type:</i> integer. Nullable
	The number of core of the instance.
ThreadsPerCore	<i>Type:</i> integer. Nullable
	The number of thread per core of the instance.
InstanceType	<i>Type:</i> text (max 256 characters). Nullable
	Cloud provider instance type.
Region	<i>Type:</i> text (max 256 characters). Nullable
	Region of the instance.
AvailabilityZone	<i>Type:</i> text (max 256 characters). Nullable
	Location of the instance.
InstanceTenancy	<i>Type:</i> text (max 256 characters). Nullable
	Instance tenancy of the instance
VMEnabledStateID	<i>Type:</i> integer. Nullable
	The state of the machine (powered on, off, etc).
InventoryDate	<i>Type:</i> datetime. Nullable
	The time of inventory date.

6

Inventory Database Schema

This chapter describes the schema for the FlexNet Manager Suite database that collects inventory uploaded by the FlexNet inventory agent, either when installed on 'adopted' devices, or when executing a remote, zero-touch inventory.

This inventory data undergoes some rationalization within this schema. The import of the resulting clean inventory data from this database to the compliance database is the work of the Compliance Reader, making use of another intermediate schema (see Compliance Reader Database Schema).

Information Structure

The following information is provided about database tables. Items appear only when relevant to the database column, and are suppressed where they do not apply. Two of these items (shown bold) are columns in the following pages, and the remainder are displayed within the **Details**.

Item	Comment
Database Column	The name of the column in the SQL table.
Туре	The data type of the contents of the database column.
Size	For types that have a maximum capacity, the upper limit is provided in parentheses.
Кеу	The word "Key" appears when a column is a unique key field within the table. It is possible for several database columns to be part of the key, so that this indicator may appear for several columns in a table.
Generated ID	This indicates that a numeric ID is assigned by the database.
Nullable	If this indicator is present, the database column permits nulls.
Computed	This indicator appears for columns that are automatically computed by the database.

Item	Comment
Default	If a column has a default value declared in the schema, this is specified at the end of the first set of details for the column.
Details	Describes the data stored in the database column, including many of the indicators described above.

AD Tables

The complete set of database tables documented here includes:

- ADComputer table (see ADComputer Table)
- ADExternalMember table (see ADExternalMember Table)
- ADSDOU table (see ADSDOU Table)
- ADUser table (see ADUser Table)

ADComputer Table

The ADComputer table is populated with data from Active Directory in preparation for an Active Directory reconciliation.

Database Column	Details
DomainID	<i>Type:</i> integer. Key
	OrganizationID of the domain in which the computer resides.
ComputerCN	<i>Type:</i> text (max 64 characters). Key
	The computer's common name.
ComputerOURDN	<i>Type</i> : text (max 384 characters). Key
	The relative distinguished name of the organizational unit or container holding this computer.
GUID	<i>Type:</i> binary (max 16 bytes). Key
	The objectGUID of the Active Directory object that represents this computer, if known.

Database Column

Details

SID

Type: text (max 256 characters). Nullable

The computer's SID.

ADExternalMember Table

The ADExternalMember table stores cross domain Active Directory objects.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 748: Database columns for ADExternalMember table

Database Column	Details
GroupID	<i>Type:</i> integer. Key The GroupID the external member belongs to.
ExternalMemberSID	<i>Type</i> : text (max 256 characters). Key The external member SID.

ADSDOU Table

The ADSDOU table is populated with domain, and organizational unit data from Active Directory in preparation for an Active Directory reconciliation.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 749: Database columns for ADSDOU table

Database Column	Details
DomainID	<i>Type:</i> integer. Key The domain in which this object resides.
RDN	<i>Type:</i> text (max 400 characters). Key The relative distinguished name of this object.
GUID	<i>Type</i> : binary (max 16 bytes). Key The ObjectGUID of this Active Directory object.

Database Column	Details
BlockInheritance	<i>Type</i> : boolean True (1) if package allocations should not be inherited from parent OUs or Domain, unless no-override is set for the Allocation (in the policy group membership mode).

ADUser Table

The ADUser table contains is populated with data from Active Directory in preparation for an Active Directory reconciliation. It is a temporary table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
DomainID	<i>Type:</i> integer. Key
	The domain in which this user resides.
UserCN	<i>Type:</i> text (max 64 characters). Key
	The user's common name.
UserOURDN	<i>Type:</i> text (max 384 characters). Key
	The relative distinguished name of the organizational unit or container
	holding this user.
GUID	<i>Type</i> : binary (max 16 bytes). Key. Nullable
	The Active Directory GUID of this user.
SAMAccountName	<i>Type:</i> text (max 20 characters). Nullable
	The user's logon name used to support clients and servers from versions of
	Windows prior to Windows 2000.
Sid	<i>Type</i> : text (max 512 characters). Nullable
	User's Sid

Table 750: Database columns for ADUser table

ClientAccess Tables

The complete set of database tables documented here includes:

ClientAccessDetail table (see ClientAccessDetail Table)

- ClientAccessOccurrence table (see ClientAccessOccurrence Table)
- ClientAccessingDevice table (see ClientAccessingDevice Table)
- ClientAccessingUser table (see ClientAccessingUser Table)
- UALSoftwareDetail table (see UALSoftwareDetail Table)

ClientAccessDetail Table

Records the entries for the client accesses obtained from the User access logging.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 751: Database columns for ClientAccessDetail table

Database Column	Details
ClientAccessDetailID	<i>Type:</i> big integer. Key. Generated ID
	Auto-generated identity number.
ClientAccessingDeviceID	<i>Type:</i> integer. Key. Nullable
	The client access device related record. This is a foreign key into the
	ClientAccessingDevice table.
ClientAccessingUserID	<i>Type</i> : integer. Key. Nullable
	The client access user related record. This is a foreign key into the
	ClientAccessingUser table.
ServerComputerID	<i>Type:</i> integer. Key
	The record of the server from which the inventory is obtained. This is a
	foreign key into the Computer table.
UALSoftwareDetailID	<i>Type:</i> integer. Key
	The client access software related record. This is a foreign key into the
	UALSoftwareDetail table.

ClientAccessOccurrence Table

Records the entries for the software access occurrence in the User access logging.

Table 752: Database columns for ClientAccessOccurrence table

Database Column	Details
ClientAccessDetailID	<i>Type</i> : big integer. Key
	Client access related record. This is a foreign key into the
	ClientAccessingDetails table.
AccessDate	<i>Type</i> : datetime. Nullable
	Date and time at which access was made to server.
InventoryDate	<i>Type</i> : datetime. Key
	Date and time at which this inventory occurrence was recorded.
LicenseDate	<i>Type</i> : datetime. Key
	Date used for licensing purposes.
AccessCount	<i>Type</i> : integer
	Number of times access was made to server.

ClientAccessingDevice Table

Records the entries for the client accessing devices obtained from the User access logging.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ClientAccessingDeviceID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number.
IPAddress	<i>Type:</i> text (max 256 characters). Key. Nullable IP Address of the client accessing device.
ComputerName	<i>Type:</i> text (max 256 characters). Key. Nullable Computer name of the client accessing device.

ClientAccessingUser Table

Records the entries for the client accessing users obtained from the User access logging.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 754: Database columns for ClientAccessingUser table

Database Column	Details
ClientAccessingUserID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number.
UserName	<i>Type:</i> text (max 256 characters). Key User name of the accessing user.
DomainName	<i>Type:</i> text (max 100 characters). Key. Nullable Domain name of the accessing user.

UALSoftwareDetail Table

Records the entries for the softwares registered in the User access logging.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 755: Database columns for UALSoftwareDetail table

Database Column	Details
UALSoftwareDetailID	<i>Type:</i> integer. Key. Generated ID
	Auto-generated identity number.
ProductName	<i>Type:</i> text (max 256 characters). Key
	The name of the instalaltion product. This may include version and edition
	too.
RoleName	<i>Type</i> : text (max 256 characters). Key. Nullable
	The URL role name. This is used when retrive data using UAL.
RoleGUID	<i>Type:</i> unique identifier. Key. Nullable
	The URL role GUID. This is used when retrive data using UAL
ClientAccessSource	<i>Type:</i> text (max 100 characters). Key
	Referencing to the client access source type.

DirectoryObjects Tables

The complete set of database tables documented here includes:

- Computer table (see Computer Table)
- OperatingSystem table (see OperatingSystem Table)
- User table (see User Table)

Computer Table

The Computer table contains all computers that have ever reported information or have been targeted by policy in a FlexNet Manager Suite environment.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComputerID	<i>Type:</i> integer. Key. Generated ID
	The ID for the computer. This is automatically generated by SQL Server.
ComputerOUID	<i>Type:</i> integer. Key
	The organizational unit of the computer in Active Directory. In an SMS organization, this is set to the OUID of the unknown OU.
ComputerCN	<i>Type:</i> text (max 256 characters). Key
	The computer's common name. In an Active Directory environment this is the common name attribute of the computer's distinguished name. This is the same as the SAM account name.
ComputerUID	<i>Type:</i> unique identifier. Key
	A unique external identifier for the computer.
OperatingSystemID	<i>Type:</i> integer. Nullable
	The operating system of the computer, if known. This allows efficient determination of the operating system breakdown of computers in an organization.
GUID	<i>Type</i> : binary (max 16 bytes). Key. Nullable
	The objectGUID of the Active Directory object that represents this computer, if known.

Table 756: Database columns for Computer table

OperatingSystem Table

This table stores the information about different types of OS available on the network devices

Table 757: Database	columns fo	or OperatingS	ystem table
---------------------	------------	---------------	-------------

Database Column	Details
OperatingSystemID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
OperatingSystemName	<i>Type:</i> text (max 128 characters). Key Name of operating system
Category	<i>Type:</i> integer. Nullable Reference to operating system category

User Table

The User table contains all of the users that have ever reported information in a FlexNet Manager Suite environment. A row has been added to cater for installations that occur from computer policy. This row has a UserID set to 1 and a UserCN of SYSTEM, and belongs to Organization 1, which is the universal Domain.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 758: Database columns for User table

Details
<i>Type:</i> integer. Key. Generated ID
The ID for the user. This is automatically generated by SQL Server.
<i>Type:</i> integer. Key
The organizational unit of the user in Active Directory. This is a foreign key
into the Organization table. In an SMS environment, this is always set to the unknown OU.
<i>Type</i> : text (max 64 characters). Key
The user's common name. In an Active Directory environment this is the
common name attribute of the user's distinguished name.
<i>Type:</i> binary (max 16 bytes). Key. Nullable
The objectGUID of the Active Directory object that represents this user, if
known.

Database Column	Details
SAMAccountName	<i>Type:</i> text (max 20 characters). Key. Nullable The SAM account name used to uniquely identify this user in event logs and user inventories.

Directory Tables

The complete set of database tables documented here includes:

- Domain table (see Domain Table)
- DomainConfiguration table (see DomainConfiguration Table)
- Group table (see Group Table)
- Member table (see Member Table)
- Organization table (see Organization Table)

Domain Table

The Domain table, in combination with the Organization table, contains data about all of the domains, and organizational units that have ever had users or computers report information in a FlexNet Manager Suite environment.

Table 759: Database columns for Domain tab	le
--	----

Database Column	Details
OrganizationID	<i>Type:</i> integer. Key Organizational ID. This is a foreign key into the Organization table.
DN	<i>Type:</i> text (max 100 characters). Key. Nullable Fully qualified distinguished name.
DomainType	<i>Type</i> : text (max 4 characters). Key. Nullable The type of directory service running, for example AD, NT 4.
FlatName	<i>Type:</i> text (max 32 characters). Nullable The NT 4 domain name.

Database Column	Details
PreferredDomainController	<i>Type:</i> text (max 32 characters). Nullable
	Preferred domain controller to query.
PreferredDomain	<i>Type:</i> boolean
ControllerOnly	Whether (0) or not to fail over to alternate server if the preferred domain controller is not contactable.
ADReconcile	<i>Type:</i> boolean
	Whether (1) or not (0) to reconcile the FlexNet Manager Suite database with Active Directory.
ADLoadLatency	<i>Type:</i> integer
	If reconciling Active Directory with the FlexNet Manager Suite database, the length of time in minutes before the Active Directory data is refreshed in the FlexNet Manager Suite database. The default value is 60 minutes. A value of 0 means load the Active Directory data into the FlexNet Manager Suite database at each reconciliation. Set this to a high value to minimize network traffic for domains for delayed reconciliation is acceptable.
MergePolicies	<i>Type:</i> boolean
	Whether (1) or not (0) to generate merged policies.
LastADReconcile	<i>Type:</i> datetime. Nullable
	The date and time of the last reconciliation of the FlexNet Manager Suite database with Active Directory.
LastADReconcileStatus	<i>Type:</i> boolean
	This field is currently unused.
LastADLoad	<i>Type:</i> datetime. Nullable
	The date and time of the last Active Directory load. A value of NULL indicates that Active Directory data should be loaded at the next reconcile operation.
LastPolicyMerge	<i>Type:</i> datetime. Nullable
	The date and time of the last generation of merged policy.
LastPolicyMergeStatus	<i>Type:</i> boolean
	This field is currently unused.
DNReverse	<i>Type:</i> text (max 100 characters). Key. Nullable
	Fully qualified distinguished name, in reverse order (to improve sub-domain search performance).

DomainConfiguration Table

The DomainConfiguration table contains configuration properties for the Domain table

Table 760: Database columns for DomainConfiguration table

Database Column	Details
DomainID	<i>Type:</i> integer. Key OrganizationID of the domain in which the entry resides.
Property	<i>Type:</i> text (max 32 characters). Key The name of the property.
Value	<i>Type:</i> text (max 256 characters). Nullable The value of the property.
DateValue	<i>Type:</i> datetime. Nullable The date and time value of the property.
LastUpdate	<i>Type:</i> datetime The date and time the property was last updated.

Group Table

Each Group identifies either a named group or an unnamed Access Control List (ACL). Each Group is associated with rows in the Member table.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 761: Database columns for Group table

Database Column	Details
GroupID	<i>Type:</i> integer. Key. Generated ID
	The ID for the group, automatically generated by SQL Server.
GUID	<i>Type:</i> binary (max 16 bytes). Key
	The Globally Unique IDentifier for the group. In the case where this Group
	represents an Access Control List for a Policy or a PackageAllocation, the
	GUID is that of this object.

Database Column	Details
GroupCN	<i>Type</i> : text (max 128 characters). Key. Nullable
	The Common Name for the group. In the case where this Group represents
	an Access Control List for a Policy or a PackageAllocation, the GroupCN is NULL.
	IS INOLL.
GroupOUID	<i>Type</i> : integer. Key
	A reference to the Organization to which the group belongs.
GroupType	<i>Type</i> : integer. Nullable
	The bitmask of flags defining the type of this Group.
SID	<i>Type</i> : text (max 256 characters). Nullable
	The security identifier of this Group.

Member Table

The Member table stores the membership lists for every group. Each Member details a User, Computer, Group, or Organization (only Policy ACL groups), and whether the specified item is excluded (only ACL groups), included (the default) or included mandatorily (cannot be excluded - used only for Organizations in Policy ACLs).

Database Column	Details
GroupID	<i>Type:</i> integer. Key
	The Group of which this is a Member.
TargetTypeID	<i>Type:</i> integer. Key
	The TargetType. Possible values are:
	• 1 = Computer
	• 2 = User
	• 3 = Group
	• 8 = OrgUnit
	• 16 = Operator

	Table 762:	Database	columns	for	Member table
--	------------	----------	---------	-----	--------------

Database Column	Details
TargetID	<i>Type</i> : integer. Key The ComputerID, UserID, GroupID or OrganizationID.
MemberMode	<i>Type:</i> integer The MemberMode is 0 for Exclude (regardless of any other memberships, the principals of this Target are excluded from this group), 1 for Include, and 2 for Always - No0verride.

Organization Table

The Organization table contains data about organizational units used in a FlexNet Manager Suite environment.

Table 763: Database columns for Organization tal	ole
--	-----

Database Column	Details
OrganizationID	<i>Type:</i> integer. Key. Generated ID
	The ID for the organizational unit. (1 is used for "unknown OU" in the universal domain).This is automatically generated by SQL Server.
RDN	<i>Type:</i> text (max 400 characters). Key. Nullable
	The relative distinguished name of this organizational unit.
GUID	<i>Type</i> : binary (max 16 bytes). Key. Nullable
	The objectGUID of the Active Directory object that represents this
	organizational unit, if known.
DomainID	<i>Type:</i> integer. Key. Nullable
	OrganizationID of the domain in which the entry resides. For a domain,
	must be set to reference self.
RDNReverse	<i>Type:</i> text (max 400 characters). Key. Nullable
	The relative distinguished name of the computer, reversed for superior
	performance on sub-organization searching.
IsUnknown	<i>Type:</i> integer
	True (1) if the organizational unit cannot be resolved through Active Directory (for example, the unknown OU, which has a NULL RDN), false (0) otherwise (if the OU has a non-empty RDN).

Database Column	Details
IsDomain	<i>Type:</i> integer True (1) if the organizational unit is a domain (has an empty - not NULL -
BlockInheritance	RDN), false (0) otherwise. <i>Type:</i> boolean
	True (1) if package allocations should not be inherited from the parent Organization, unless NoOverride is set for the Policy. NoOverride is set using MemberMode=2 (Always) on the Organization member in the Policy ACL group.

Distribution Tables

The complete set of database tables documented here includes:

- DistributedPackage table (see DistributedPackage Table)
- DistributionGroup table (see DistributionGroup Table)
- DistributionGroupMember table (see DistributionGroupMember Table)
- DistributionServer table (see DistributionServer Table)
- DistributionServerStatus table (see DistributionServerStatus Table)
- DistributionServerType table (see DistributionServerType Table)

DistributedPackage Table

The DistributedPackage table stores the status (both of current and pending distributions) of package distributions to distribution servers and distribution locations.

Database Column	Details
DistributedPackageID	<i>Type</i> : integer. Key. Generated ID Auto-generated identity number
ServerUID	<i>Type:</i> binary (max 16 bytes). Key The distribution server or distribution location related to the status record. This is a foreign key into the DistributionServer table.
RequestedVersionID	<i>Type:</i> integer. Key. Nullable The id for the Requested PackageVersion.

Table 764: Database columns for DistributedPackage table

Database Column	Details
RequestState	<i>Type</i> : text (max 16 characters). Nullable The state of a package that is pending distribution. The possible values are: • empty (literal string)
	pendingremoving
	If the RequestState field contains a value other than the literal string empty, the RequestState overrides the ConfirmedState of the package.
RequestDate	<i>Type:</i> datetime. Nullable
	The date and time at which the package distribution began. Only used for distributions currently in progress.
ConfirmedVersionID	<i>Type:</i> integer. Key. Nullable
	The id for the Existing PackageVersion
ConfirmedState	<i>Type</i> : text (max 16 characters). Nullable
	The state of the package currently on the distribution server or distribution location. The possible values are:
	• available
	• unavailable
	If the RequestState field contains a value other than the literal string empty, then the RequestState overrides the ConfirmedState of the package.
ConfirmedDate	<i>Type:</i> datetime. Nullable
	The date and time that the current distribution status of a package was recorded.
ConfirmedReason	<i>Type:</i> text. Nullable
	The reason that package distribution failed. This is only specified in the case of a failure.

DistributionGroup Table

All defined distribution groups are stored in the DistributionGroup table.

Table 765: Database columns for DistributionGroup table

Database Column	Details
GroupUID	<i>Type</i> : binary (max 16 bytes). Key A unique identifier for this distribution group.
GroupName	<i>Type:</i> text (max 128 characters). Key The descriptive name assigned to this distribution group.

DistributionGroupMember Table

Any distribution servers and distribution locations assigned to distribution groups are stored in the DistributionGroupMember table.

Database Column	Details
GroupUID	<i>Type</i> : binary (max 16 bytes). Key
	A unique identifier for this distribution group. This UID is a foreign key to the GroupUID in the DistributionGroup table.
MemberID	<i>Type</i> : binary (max 16 bytes). Key
	A unique identifier for the distribution server or distribution location that is a member of this group. This UID is a foreign key to the ServerUID in the DistributionServer table.
MemberType	<i>Type</i> : integer
	An identifier for the type of this distribution group member. This identifier is a foreign key to the TargetTypeID in the DistributionServerType table.

DistributionServer Table

The DistributionServer table stores all of the distribution servers and distribution locations in the FlexNet Manager Suite distribution hierarchy.

Table 767: Databas	e columns foi	DistributionServer	table
--------------------	---------------	--------------------	-------

Database Column	Details
ServerUID	<i>Type:</i> binary (max 16 bytes). Key A unique identifier for the distribution server or distribution location. The core distribution server has a value of all zeroes.

Database Column	Details
DNSName	<i>Type:</i> text (max 128 characters). Nullable
	DNS name of the server
ServerType	<i>Type</i> : small integer
	The server type. The possible values are:
	0 for distribution location
	• 1 for distribution server
ServerName	<i>Type</i> : text (max 64 characters)
	The name of the distribution server or distribution location.
PrimaryParentUID	<i>Type:</i> binary (max 16 bytes). Key. Nullable
	The parent of the distribution server or distribution location. For the core distribution server, the PrimaryParentUID is NULL.
ConfigState	<i>Type:</i> text (max 20 characters). Nullable
	The state of configuration of the distribution server. This is only set for distribution servers (ServerType is 1).This can be one of the following values:
	• configure
	• failed
	• pending
	• NULL
LastConfigStart	<i>Type</i> : datetime. Nullable
	The date and time of the last configuration message sent to the distribution server. This is only set for distribution servers (ServerType is 1).
LastConfigJobId	<i>Type:</i> text (max 40 characters). Nullable
	The job identifier for the last configuration message sent to the distribution server. This is only set for distribution servers (ServerType is 1).
ConfigFailReason	<i>Type:</i> text. Nullable
	The reason for a configuration failure for the distribution server.
PolicyQuarantined	<i>Type</i> : boolean
	Boolean value indicating whether this distribution location is quarantined from receiving policy distributions.
TenantID	<i>Type</i> : small integer
	The Tenant ID this Distribution Server has been assigned to.

DistributionServerStatus Table

The DistributionServerStatus table stores status information for the distribution servers in the FlexNet Manager Suite distribution hierarchy.

Database Column	Details
ServerUID	<i>Type:</i> binary (max 16 bytes). Key
	The distribution server related to the status record. This is a foreign key into the DistributionServer table.
ReportedDate	<i>Type:</i> datetime
	The date and time at which the distribution server last reported status information for this parameter.
Туре	<i>Type:</i> text (max 32 characters). Key
	The type of the status parameter reported. Currently supported types are 'job' for jobs on the distribution server and 'logs' for log files awaiting upload from the distribution server.
Name	<i>Type:</i> text (max 64 characters). Key
	The name of the status parameter reported. This is an internal name for the parameter and is not intended for display.
Count	<i>Type:</i> integer
	The count of items for this status parameter currently awaiting processing by this distribution server.
DelayedCount	<i>Type:</i> integer
	The count of items for this status parameter that are older than a configurable time period that are currently awaiting processing by this distribution server. This will not necessarily have meaning for each status parameter.

Table 768: Database columns for DistributionServerStatus table

DistributionServerType Table

The available distribution server types are defined in the DistributionServerType table.

Table 769: Database columns for DistributionServerType table

Database Column	Details
DistributionServerTypeID	<i>Type:</i> integer. Key An identifier for this distribution server type.

Database Column	Details
DistributionServerType	<i>Type:</i> text (max 256 characters). Key
Name	The descriptive name assigned to this distribution server type.

Installation Tables

The complete set of database tables documented here includes:

- Installation table (see Installation Table)
- InstallationHistory table (see InstallationHistory Table)
- Reason table (see Reason Table)

Installation Table

The Installation table contains the latest installation status of each package for each user and computer. Success or failure of installations is recorded. When a package is uninstalled, its installation status record is removed from the table. When an installation is successful, the successful installation status record replaces any earlier failure status records. Once an installation is successful, the Installation table retains the successful installation status record even if there are subsequent failed installation attempts. If there have been any subsequent failed installations, the latest of these failure records is also be retained. For example, if an installation fails, and then succeeds on a subsequent attempt, only the successful status is recorded. If an installation succeeds, but a later installation attempt fails, then both the success and failure status records are stored. All other installations are added to the InstallationHistory table as new status information is generated.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 770: Database columns for Installation table

Database Column	Details
ComputerID	<i>Type:</i> integer. Key
	The computer that the installation event occurred on. This is a foreign key into the Computer table.
UserID	<i>Type:</i> integer. Key
	The user associated with the installation event. This is a foreign key into the $User$ table. If the <code>UserID</code> is 1 (system user), then the installation event
	occurred as part of computer policy. Otherwise, the installation event occurred as part of user policy.

Database Column	Details
PackageVersionID	<i>Type:</i> integer. Key
	Package version that was installed
OrganizationID	<i>Type:</i> integer. Key
	The organizational unit of the user or computer associated with the installation event. This is a foreign key into the Organization table. This
	column is included in the table for clustering purposes. The value of OUID could be determined by looking up the User or Computer table. If the
	<code>UserID</code> is 1 (system user), OUID represents the organizational unit of the
	computer that the installation event occurred on. Otherwise, it represents the organizational unit of the user associated with the installation event.
Action	<i>Type:</i> text (max 10 characters)
	The action performed on the package. This is currently set to "install". In
	future, "upgrade", "update" and "selfheal" may be added.
Reported	<i>Type:</i> datetime. Nullable
	The date and time that the installation event occurred.
Received	<i>Type:</i> datetime. Nullable
	The date and time that the installation status event was received into the database.
FailReasonID	<i>Type</i> : integer. Nullable
	A reference to the reason for the installation failure. If the installation succeeded then this value is NULL.
Result	<i>Type</i> : text (max 16 characters). Nullable
	The result of the package installation. Possible values are success or failure.

InstallationHistory Table

The action performed on the package, normally "install" or "uninstall". In the event that installation event logs were lost, entries may be reconstructed here from data in inventory (cache tracking). Such entries may be less reliable (in particular the recorded date will be the date of the inventory) and will have one of the following Action values:

- "inv insert"
- "inv delete"
- "inv update"

Table 771: Database columns for InstallationHistory table

Database Column	Details
ComputerID	<i>Type:</i> integer. Key
	The computer that the installation event occurred on. This is a foreign key into the Computer table.
UserID	<i>Type</i> : integer. Key
	The user associated with the installation event. This is a foreign key into the User table. If the UserID is 1 then the installation event occurred as part o computer policy. Otherwise, the installation event occurred as part of user policy.
PackageVersionID	<i>Type</i> : integer. Key
	The id for the PackageVersion installed
Reported	<i>Type</i> : datetime. Key
	The date and time that the installation event occurred.
Action	<i>Type:</i> text (max 10 characters)
	The action performed on the package. This value can be either, install or uninstall.
Received	<i>Type</i> : datetime. Nullable
	The date and time that the installation status event was received into the database.
FailReasonID	<i>Type</i> : integer. Nullable
	A reference to the reason for the installation failure. If the installation succeeded then this value is NULL.
Result	<i>Type:</i> text (max 16 characters). Nullable
	The result of the package installation. Possible values are either success or failure.

Reason Table

Stores extended text uploaded from logs to describe operational failures.

Database Column	Details
ReasonID	<i>Type:</i> integer. Key. Generated ID The ID for the Reason. This is automatically generated by SQL Server.
ReasonHash	<i>Type:</i> integer. Key The checksum of the ReasonText, calculated by SQL Server.
ReasonText	<i>Type:</i> text The Reason text.

Table 772: Database columns for Reason table

Inventory Tables

The complete set of database tables documented here includes:

- ComputerResourceData table (see ComputerResourceData Table)
- ComputerResourceHierarchySCD table (see ComputerResourceHierarchySCD Table)
- ComputerResourceProcessorSCD table (see ComputerResourceProcessorSCD Table)
- ComputerResourceType table (see ComputerResourceType Table)
- ComputerResourceVMPoolType table (see ComputerResourceVMPoolType Table)
- ComputerResourceVMType table (see ComputerResourceVMType Table)
- ComputerResourceVirtualMachine table (see ComputerResourceVirtualMachine Table)
- HardwareClass table (see HardwareClass Table)
- HardwareObject table (see HardwareObject Table)
- HardwareProperty table (see HardwareProperty Table)
- HardwareValue table (see HardwareValue Table)
- InventoryReport table (see InventoryReport Table)
- ServiceComponent table (see ServiceComponent Table)
- ServiceProvider table (see ServiceProvider Table)
- ServiceProviderApplicationOracle table (see ServiceProviderApplicationOracle Table)
- ServiceProviderApplicationUsagePerMonth table (see ServiceProviderApplicationUsagePerMonth Table)
- ServiceProviderApplicationUsageType table (see ServiceProviderApplicationUsageType Table)
- ServiceProviderApplicationUserOracle table (see ServiceProviderApplicationUserOracle Table)
- ServiceProviderComponent table (see ServiceProviderComponent Table)

- ServiceProviderComponentProperty table (see ServiceProviderComponentProperty Table)
- ServiceProviderComponentValue table (see ServiceProviderComponentValue Table)
- ServiceProviderName table (see ServiceProviderName Table)
- ServiceProviderProperty table (see ServiceProviderProperty Table)
- ServiceProviderType table (see ServiceProviderType Table)
- ServiceProviderValue table (see ServiceProviderValue Table)
- ServiceUser table (see ServiceUser Table)
- ServiceUserOracle table (see ServiceUserOracle Table)
- SoftwareDetails table (see SoftwareDetails Table)
- SoftwareFile table (see SoftwareFile Table)
- SoftwareFileName table (see SoftwareFileName Table)
- SoftwareFilePath table (see SoftwareFilePath Table)
- SoftwareIsoTagEntity table (see SoftwareIsoTagEntity Table)
- SoftwareIsoTagFile table (see SoftwareIsoTagFile Table)
- SoftwareIsoTagSoftwareVersion table (see SoftwareIsoTagSoftwareVersion Table)
- SoftwareIsoTagUnique table (see SoftwareIsoTagUnique Table)
- SoftwareOccurrence table (see SoftwareOccurrence Table)
- SoftwareOccurrenceSoftwareIsoTagFile table (see SoftwareOccurrenceSoftwareIsoTagFile Table)
- SoftwareProperty table (see SoftwareProperty Table)
- SoftwareValue table (see SoftwareValue Table)
- SoftwareVersion table (see SoftwareVersion Table)
- VirtualDesktopAccess table (see VirtualDesktopAccess Table)
- VirtualDesktopApplicationUsage table (see VirtualDesktopApplicationUsage Table)
- VirtualDesktopGroupAccess table (see VirtualDesktopGroupAccess Table)
- VirtualDesktopGroupAccessScan table (see VirtualDesktopGroupAccessScan Table)

ComputerResourceData Table

ComputerResourceData stores information about computer resources used in the enterprise.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 773: Database columns for ComputerResourceData table

Database Column	Details
ComputerResourceID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for a ComputerResourceData.
ComputerResourceTypeID	<i>Type:</i> integer. Key
	The type of resource. Foreign key to the ComputerResourceType table.
ComputerUID	<i>Type:</i> unique identifier. Key. Nullable
	The computer resource's UUID, in the byte order reported in inventory. Foreign key to the Computer table.
ComputerResourceVMPool	<i>Type:</i> integer. Nullable
TypeID	If this resource is a resource pool, this specifies the type of pool. Foreign key to the ComputerResourceVMPoolType table.
ComputerResourceVMTypeID	<i>Type:</i> integer. Key. Nullable
	If this resource is a virtual machine, this specifies the type of virtual machine or partition. Foreign key to the ComputerResourceVMType table.
NormalizedSerialNo	<i>Type:</i> text (max 100 characters). Key. Nullable
	The serial number of the resource in a normalized format.
Name	<i>Type:</i> text (max 256 characters). Nullable
	The name of the resource.
Manufacturer	<i>Type:</i> text (max 128 characters). Key. Nullable
	The manufacturer of the resource.
ModelNo	<i>Type:</i> text (max 128 characters). Key. Nullable
	The model number of the resource.
SerialNo	<i>Type:</i> text (max 100 characters). Key. Nullable
	The serial number of the resource.
IsFabricatedHost	<i>Type:</i> boolean
	Is the host generated from the virtual machine inventory.
LastUpdated	<i>Type:</i> datetime. Nullable
	The last time this computer resource was updated.

ComputerResourceHierarchySCD Table

ComputerResourceHierarchySCD is a table defining relationships between computer resources

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComputerResourceID	<i>Type:</i> integer. Key
	The guest resource in the relationship. Foreign key to the ComputerResourceData table.
HostComputerResourceID	<i>Type:</i> integer. Key
	The host resource in the relationship. For an unhosted computer and for a host computer this value will be identical to the ComputerResourceID value.
	Foreign key to the ComputerResourceData table.
ParentComputerResourceID	<i>Type:</i> integer. Key. Nullable
	The direct parent of the guest resource (which might be, for example, a resource pool). Is NULL when the guest resource has no parents within the hierarchy. Foreign key to the ComputerResourceData table.
ValidFrom	<i>Type:</i> datetime. Key
	Date from which this relationship record became valid.
ValidTo	<i>Type:</i> datetime. Key
	Date this hierarchy was valid to, or 9999-12-31T23:59:59.997 if it is currently valid. (This string is used to represent an indefinite future.)

Table 774: Database columns for ComputerResourceHierarchySCD table

ComputerResourceProcessorSCD Table

ComputerResourceProcessorSCD is a table listing processor specifications for a particular computer resource.

Database Column	Details
ComputerResourceID	<i>Type:</i> integer. Key
	The resource to which the processor specification applies. Foreign key to the ComputerResourceData table.
NumberOfProcessors	<i>Type:</i> decimal. Nullable
	The number of processors in the resource.
NumberOfCores	<i>Type:</i> decimal. Nullable
	The number of cores in the resource.
NumberOfLogicalProcessors	<i>Type:</i> integer. Nullable
	The number of logical processors in the resource. A logical processor is a processor thread.
PartialNumberOfProcessors	<i>Type:</i> decimal. Nullable
	The fractional processor count available to this computer.
ProcessorType	<i>Type:</i> text (max 256 characters). Nullable
	The type of processor in the resource.
MaxClockSpeed	<i>Type:</i> integer. Nullable
	The maximum clock speed (in megahertz) of the fastest processor in the resource.
ValidFrom	<i>Type:</i> datetime. Key
	Date from which these properties became valid.
ValidTo	<i>Type:</i> datetime. Key
	Date these properties were valid to, or 9999-12-31T23:59:59.997 if they are currently valid.

Table 775: Database columns for ComputerResourceProcessorSCD table

ComputerResourceType Table

ComputerResourceType is a static table listing all possible computer resource types.

Table 776: Database columns for ComputerResourceType table

Database Column	Details
ComputerResourceTypeID	<i>Type:</i> integer. Key. Generated ID
	A unique identifier for each ComputerResourceType. Possible values and
	the corresponding default strings are:
	• 1 = Host
	• 2 = Resource pool
	• 3 = Virtual machine
	• 4 = Physical machine that is not a virtual host of any kind.
Name	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a resource
	type.
DefaultValue	<i>Type:</i> text (max 128 characters)
	The text to display if the resource type resource string has no translation.

ComputerResourceVMPoolType Table

VMPoolType is a static table listing the possible types of a virtual machine pool.

Database Column	Details
ComputerResourceVMPool TypeID	<i>Type:</i> integer. Key. Generated ID A unique identifier for a VMPoolType. Possible values and the corresponding
	default names are:1 = Folder
	• 2 = Data Center
	• 3 = Compute Resource
	• 4 = Host System
	• 5 = Resource Pool
	• 6 = Virtual Machine
	• 7 = Physical Shared Pool
	• 8 = Virtual Shared Pool
	• 9 = LPAR
	• 10 = RSET
	• 11 = Cluster Compute Resource.
	• 12 = PSET
VCTypeID	<i>Type:</i> text (max 32 characters)
	The type of the virtual machine folder in VMware Virtual Center.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a pool type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the pool type resource string has no translation.

Table 777: Database columns for ComputerResourceVMPoolType table

ComputerResourceVMType Table

VMType is a static table listing the possible types of virtual machine or partition.

Table 778: Database columns for ComputerResourceVMType table

Database Column	Details
ComputerResourceVMTypeID	 <i>Type:</i> integer. Key. Generated ID A unique identifier for a VMType. Possible values and the corresponding default names are: 1 = VMware
	• 2 = Hyper-V
	• 3 = LPAR
	• 4 = WPAR
	• 5 = nPar
	• 6 = vPar
	• 7 = SRP
	• 8 = Zone
	• 9 = Unknown
	• 10 = Oracle VM.
ResourceName	<i>Type:</i> text (max 256 characters). Key
	The unique name of the localizable resource string representing a virtual machine or partition type. Foreign key to the ComplianceResourceString table.
DefaultValue	<i>Type:</i> text (max 100 characters)
	The text to display if the type resource string has no translation.

ComputerResourceVirtualMachine Table

ComputerResourceVirtualMachine is a table containing the type and normalized UUID of virtual machines and the host they are currently known to be on. The normalized UUID is the virtual machine UUID with hyphen and white space characters removed.

Database Column	Details
ComputerResourceID	<i>Type:</i> integer. Key The host the virtual machine is currently known to be on. Foreign key to the
	ComputerResourceData table.
ComputerResourceVMTypeID	<i>Type:</i> integer. Key
	Type of virtual machine or partition. Foreign key to the
	ComputerResourceVMType table.
NormalizedUUID	<i>Type:</i> text (max 100 characters). Key
	The normalized UUID of the virtual machine.

Table 779: Database columns for ComputerResourceVirtualMachine table

HardwareClass Table

HardwareClass contains a record for every class of hardware object found during hardware inventories, including mainly the WMI classes

Table 780: Database columns for HardwareClass table

Database Column	Details
HardwareClassID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
Class	<i>Type:</i> text (max 256 characters). Key Hardware Class name
SuperClassID	<i>Type:</i> integer. Key. Nullable Reference to superclass, if any (and known)

HardwareObject Table

The HardwareObject table entries describe a specific configuration item (usually a piece of physical hardware) associated with a computer. The information is represented in the database as Windows Management Instrumentation (WMI) classes.

Table 781: Database columns for HardwareObject table

Database Column	Details
HardwareObjectID	<i>Type:</i> integer. Key. Generated ID
	Auto-generated identity number
ComputerID	<i>Type:</i> integer. Key
	The computer on which the hardware was found. It is a foreign key into the Computer table.
HardwareName	<i>Type:</i> text (max 256 characters). Key
	The hardware name as reported by the system.
Occurrence	<i>Type:</i> integer. Key
	The distinguishing identifier for the hardware. For example, if a computer
	has more than one memory card with the same Class and HardwareName,
	each memory card is assigned an 0 ccurrence value (0, 1, 2).
HardwareClassID	<i>Type:</i> integer. Key
	The id for the HardwareClass of the object.

HardwareProperty Table

The HardwareProperty table provides property names and values for each hardware object. The information is represented in the database as Windows Management Instrumentation (WMI) properties.

Database Column	Details
HardwarePropertyID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
Property	<i>Type:</i> text (max 256 characters). Key The hardware property. A single hardware object can have many properties.

HardwareValue Table

The value of a specified HardwareProperty of the specified HardwareObject.

Table 783: Database columns for HardwareValue table

Database Column	Details
HardwareObjectID	<i>Type:</i> integer. Key Object.
HardwarePropertyID	<i>Type:</i> integer. Key Property.
Value	<i>Type:</i> text. Nullable Property value.

InventoryReport Table

The InventoryReport table contains a record of every user and computer that has reported hardware or software inventory. It details the date and time when the hardware or software tracking was performed.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 784: Database columns for InventoryReport table

Database Column	Details
ComputerID	<i>Type:</i> integer. Key
	The computer that the inventory was tracked on. This is a foreign key into the Computer table.
UserID	<i>Type:</i> integer. Key
	The user for whom inventory was tracked. For computer inventory, the UserID is 1 (system user). This is a foreign key into the User table.
SWDate	<i>Type:</i> datetime. Nullable
	The time software was tracked, or is NULL if no tracking is recorded.
HWDate	<i>Type:</i> datetime. Nullable
	The time hardware was tracked, or is NULL if no tracking is recorded.
FilesDate	<i>Type:</i> datetime. Nullable
	The time files were tracked, or is NULL if no tracking is recorded.
ServicesDate	<i>Type:</i> datetime. Nullable
	The time Oracle services were tracked, or is NULL if no tracking is recorded.

Database Column	Details
VMwareServicesDate	<i>Type:</i> datetime. Nullable
	The time VMware services were tracked, or is NULL if no tracking is recorded.
SequenceNumber	<i>Type:</i> integer. Nullable
	Used when generating a differential inventory.
OVMMDate	<i>Type:</i> datetime. Nullable
	The time Oracle VM manager was interrogated, or is NULL if no
	interrogation is recorded.
AccessDate	<i>Type:</i> datetime. Nullable
	Access time information was tracked, or is NULL if no tracking is recorded.

ServiceComponent Table

A software component installed to implement a ServiceProvider.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 785: Database columns for ServiceComponent table

Database Column	Details
ServiceComponentID	<i>Type:</i> integer. Key. Generated ID
	Unique ID for the service component.
Name	<i>Type:</i> text (max 128 characters). Key
	The name of the service component.
Version	<i>Type:</i> text (max 32 characters). Key
	The version of the service component.
Publisher	<i>Type:</i> text (max 128 characters). Key
	The publisher of the service component.
Edition	<i>Type:</i> text (max 128 characters). Key
	The edition of the service component.

ServiceProvider Table

The inventoried providers of services.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 786: Database columns for ServiceProvider table

Database Column	Details
ServiceProviderID	<i>Type:</i> integer. Key. Generated ID
	Unique ID for the service provider.
ComputerID	<i>Type:</i> integer. Key
	The Computer this service provider is hosted by.
ParentServiceProviderID	<i>Type:</i> integer. Key. Nullable
	The ServiceProvider this provider is parented by.
EnterpriseManager	<i>Type:</i> integer. Key. Nullable
ServiceProviderID	The ServiceProvider of the OEM instance that manages this provider.
ServiceProviderTypeID	<i>Type:</i> integer. Key
	The ServiceProviderType of the service provider.
ServiceProviderNameID	<i>Type:</i> integer. Key
	The ServiceProviderName of the service provider.
LastInventoryDate	<i>Type:</i> datetime
	The date and time that the service provider was last inventoried.
LastInventoryResult	<i>Type:</i> integer. Nullable
	The error code returned when the service provider was last inventoried.
LastInventoryError	<i>Type:</i> text (max 256 characters). Nullable
	The error message returned when the service provider was last inventoried.
CreationDate	<i>Type:</i> datetime. Nullable
	The date and time that the service provider was created.
AuditEvidence	<i>Type:</i> binary. Nullable
	The Oracle LMS audit evidence in zip archive.

ServiceProviderApplicationOracle Table

An Oracle application.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 787: Database columns for ServiceProviderApplicationOracle table

Database Column	Details
ServiceProvider ApplicationOracleID	<i>Type:</i> integer. Key. Generated ID Unique ID for the Oracle application.
ServiceProviderID	<i>Type:</i> integer. Key Unique ID for the service provider.
Name	<i>Type:</i> text (max 240 characters). Key The application name.
Users	<i>Type:</i> integer The number of users.
ApplicationID	<i>Type:</i> integer. Key The ID of the application as assigned by Oracle.

ServiceProviderApplicationUsagePerMonth Table

A count of oracle application usage items per month.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ServiceProvider ApplicationUsagePer MonthID	<i>Type:</i> integer. Key. Generated ID Unique ID for the Oracle per month summary count.
ServiceProviderID	<i>Type:</i> integer. Key Unique ID for the service provider.
ServiceProvider ApplicationUsageTypeID	<i>Type</i> : integer. Key The ServiceProviderApplicationUsageType of the service provider application usage.

Table 788: Database columns for ServiceProviderApplicationUsagePerMonth table

Database Column	Details
YearMonth	<i>Type:</i> datetime. Key The year and month of the count.
ItemsUsed	<i>Type:</i> integer The number of items used.

ServiceProviderApplicationUsageType Table

The types of inventoried ServiceProviderApplicationUsagePerMonth items.

 Table 789: Database columns for ServiceProviderApplicationUsageType table

Database Column	Details
ServiceProvider ApplicationUsageTypeID	<i>Type:</i> integer. Key. Generated ID Unique ID for the service provider application usage item type.
Туре	<i>Type</i> : text (max 128 characters). Key The type of a service provider application usage item.

ServiceProviderApplicationUserOracle Table

An Oracle applications User.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 790: Database columns for ServiceProviderApplicationUserOracle table

Database Column	Details
ServiceProvider ApplicationUserOracleID	<i>Type:</i> integer. Key. Generated ID Unique ID for the Oracle application user.
ServiceProvider ApplicationOracleID	<i>Type:</i> integer. Key The application this user is associated with.
UserID	<i>Type:</i> integer. Key The application users user ID.
UserName	<i>Type:</i> text (max 100 characters) The application users user name.

Database Column	Details
Description	<i>Type:</i> text (max 240 characters). Nullable The application users description.
EMail	<i>Type:</i> text (max 240 characters). Nullable The application users email address.

ServiceProviderComponent Table

A software component installed to implement a ServiceProvider.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 791: Database columns for ServiceProviderComponent table

Database Column	Details
ServiceProviderID	<i>Type:</i> integer. Key The ServiceProvider this component is associated with.
ServiceComponentID	<i>Type:</i> integer. Key The ServiceComponent this provider is associated with.

ServiceProviderComponentProperty Table

The ServiceProviderComponentProperty table provides property names and values for each service component on a provider.

Table 792: Database columns for ServiceProviderComponentProperty table

Database Column	Details
ServiceProvider ComponentPropertyID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
Property	<i>Type:</i> text (max 256 characters). Key The service component property. A single service component on a provider can have many properties.

ServiceProviderComponentValue Table

The value of a specified ServiceProviderComponentProperty of the specified ServiceProviderComponent.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 793: Database columns for ServiceProviderCom	ponentValue table
--	-------------------

Database Column	Details
ServiceProviderID	<i>Type:</i> integer. Key Service provider.
ServiceComponentID	<i>Type:</i> integer. Key Service component.
ServiceProvider ComponentPropertyID	<i>Type:</i> integer. Key Property.
Value	<i>Type:</i> text (max 256 characters). Nullable Property value.

ServiceProviderName Table

The names of inventoried ServiceProviders.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 794: Database columns for ServiceProviderName table

Database Column	Details
ServiceProviderNameID	<i>Type:</i> integer. Key. Generated ID Unique ID for the service provider name.
Name	<i>Type:</i> text (max 128 characters). Key The name of a service provider.

ServiceProviderProperty Table

The ServiceProviderProperty table provides property names and values for each service provider.

Table 795: Database columns for ServiceProviderProperty table

Database Column	Details
ServiceProviderPropertyID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
Property	<i>Type:</i> text (max 256 characters). Key The service provider property. A single service provider can have many properties.

ServiceProviderType Table

The types of inventoried ServiceProviders.

Database Column	Details
ServiceProviderTypeID	<i>Type:</i> integer. Key. Generated ID Unique ID for the service provider type.
Туре	<i>Type:</i> text (max 128 characters). Key The type of a service provider.

ServiceProviderValue Table

The value of a specified ServiceProviderProperty of the specified ServiceProvider.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 797: Database columns for ServiceProviderValue table

Database Column	Details
ServiceProviderID	<i>Type:</i> integer. Key Service provider.
ServiceProviderPropertyID	<i>Type:</i> integer. Key Property.
Value	<i>Type:</i> text (max 256 characters). Nullable Property value.

ServiceUser Table

A user that uses a ServiceProvider.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 798: Database columns for ServiceUser table

Database Column	Details
ServiceUserID	<i>Type</i> : integer. Key. Generated ID
	Unique ID for the service user.
ServiceProviderID	<i>Type:</i> integer. Key
	The ServiceProvider this user is associated with.
Name	<i>Type:</i> text (max 128 characters). Key
	The name of the service user.
Description	<i>Type:</i> text (max 256 characters). Nullable
	A textual description of the service user.
AccountStatus	<i>Type:</i> text (max 256 characters). Nullable
	Current status of user account.
CreationDate	<i>Type:</i> datetime. Nullable
	Date and time when user was created.
LastLogonDate	<i>Type:</i> datetime. Nullable
	Date and time when user last logged on.

ServiceUserOracle Table

A specific kind of ServiceUser, specifically an Oracle user.

Table 799: Database columns for ServiceUserOracle table

Database Column	Details
ServiceUserOracleID	<i>Type:</i> integer. Key. Generated ID Unique ID for the Oracle service user.
ServiceUserID	<i>Type:</i> integer. Key The service user this user is associated with.
DefaultTablespace	<i>Type:</i> text (max 256 characters). Nullable The default tablespace for the user.
TempTablespace	<i>Type</i> : text (max 256 characters). Nullable The temporary tablespace for the user.

SoftwareDetails Table

The SoftwareDetails table contains a record of detailed data for each SoftwareOccurrence found.

Table 800: Database columns for SoftwareDetails table

Database Column	Details
SoftwareDetailsID	<i>Type:</i> integer. Key. Generated ID
	The id for the software details. This is automatically generated by SQL Server.
RawSoftwareName	<i>Type:</i> text (max 128 characters). Key
	The name of the software defined by the vendor, unprocessed by FlexNet Manager Suite.
RawVersion	<i>Type:</i> text (max 32 characters). Key
	The version of the software defined by the vendor, unprocessed by FlexNet Manager Suite.
Publisher	<i>Type:</i> text (max 256 characters). Key
	The publisher of the software defined by the vendor.
ProductID	<i>Type:</i> text (max 256 characters). Key
	The MSI product ID of the software defined by the vendor.

SoftwareFile Table

The SoftwareFile table contains a record for each file associated with an application on each computer. File tracking is not enabled by default. For more information on configuring which files to track, see the section about the Inventory Agent.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 801: Database columns for SoftwareFile table

Database Column	Details
SoftwareFileID	<i>Type:</i> big integer. Key. Generated ID
	The id for the software file. This is automatically generated by SQL Server.
ComputerID	<i>Type:</i> integer. Key
	The computer on which the file was tracked. This is a foreign key into the Computer table.
SoftwareID	<i>Type:</i> integer. Key. Nullable
	The software containing the file that was tracked. This is a foreign key into the SoftwareVersion table.
SoftwareIsoTagFileID	<i>Type:</i> integer. Key. Nullable
	The software ID tag content of the file. This is a foreign key into the SoftwareIsoTagFile table.
Version	<i>Type:</i> text (max 32 characters). Nullable
	The version of the software file defined by the vendor.
MD5	<i>Type:</i> text (max 32 characters)
	The file's MD5 digest.
Size	<i>Type:</i> integer
	The file's size in bytes.
DateTime	<i>Type:</i> datetime. Nullable
	The last date and time the file was modified on the computer.
FileVersion	<i>Type:</i> text (max 256 characters). Nullable
	The file version of the software file defined by the vendor.
FileDescription	<i>Type:</i> text (max 256 characters). Nullable
	The file description of the software file defined by the vendor.
Language	<i>Type:</i> text (max 256 characters). Nullable
	The language of the software file defined by the vendor.
CompanyName	<i>Type:</i> text (max 256 characters). Nullable
	The company name of the software file defined by the vendor.

Database Column	Details
SoftwareFilePathID	<i>Type:</i> integer. Key. Nullable The full path to the file that was tracked, minus the filename. This is a foreign key into the SoftwareFilePath table.
SoftwareFileNameID	<i>Type:</i> integer. Key. Nullable The name of the file that was tracked, minus the path. This is a foreign key into the SoftwareFileName table.

SoftwareFileName Table

The SoftwareFileName table contains a record for each unique file name for files captured in inventory.

Table 802: Database	columns for	SoftwareFileNa	me table
	columns for	501 CMUI CI 11CMU	ine tuble

Database Column	Details
SoftwareFileNameID	<i>Type:</i> integer. Key. Generated ID The id for the software file name. This is automatically generated by SQL Server.
Name	<i>Type:</i> text (max 400 characters). Key The name of a file captured in inventory, minus the path.
CreationDate	<i>Type:</i> datetime. Key The creation date of the SoftwareFileName which will be used to cleanup the older unused records.

SoftwareFilePath Table

The SoftwareFilePath table contains a record for each unique file path for files captured in inventory.

Table 803: Database	columns for	SoftwareFilePath table
	columns for	Sol chai ci ffei a cii tabie

Database Column	Details
SoftwareFilePathID	<i>Type:</i> integer. Key. Generated ID The id for the software file path. This is automatically generated by SQL Server.
Path	<i>Type:</i> text (max 400 characters). Key The full path to a file captured in inventory, minus the filename.

Database Column	Details
CreationDate	<i>Type:</i> datetime. Key
	The creation date of the SoftwareFilePath which will be used to cleanup the older unused records.

SoftwareIsoTagEntity Table

The SoftwareIsoTagEntity table provides property names and values for each unique entities on software ID tags.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 804: Database columns for SoftwareIsoTagEntity table

Database Column	Details
SoftwareIsoTagEntityID	<i>Type:</i> integer. Key. Generated ID The SoftwareIsoTagEntity table unique ID for each records.
RegID	<i>Type:</i> text (max 200 characters). Key The unique registration ID value of an entity in an software ID tag.
Name	<i>Type:</i> text (max 200 characters). Key The entity name value in a software ID tag.

SoftwareIsoTagFile Table

The SoftwareIsoTagFile table provides property names and values for each Software ID Tag in a normalized manner.

Database Column	Details
SoftwareIsoTagFileID	<i>Type:</i> integer. Key. Generated ID The SoftwareIsoTagFile that this property belongs to

Database Column	Details
MD5	<i>Type:</i> text (max 32 characters). Key
	The MD5 propery value of software ID tag file.
TagContent	<i>Type:</i> text
	The actual content of the software id tag file.
EntitlementRequired	<i>Type:</i> boolean. Nullable
Indicator	The entitlement required indicator value of the software ID tag.
SoftwareIsoTagSoftware	<i>Type:</i> integer. Key. Nullable
VersionID	The product version and name identifier for this software. This is a foreign key into the SoftwareIsoTagSoftwareVersion table.
SoftwareCreatorEntityID	<i>Type:</i> integer. Key. Nullable
	The software creator related data for software ID tag. This is a foreign key into the SoftwareIsoTagEntity table.
SoftwareLicensorEntityID	<i>Type:</i> integer. Key. Nullable
	The software licensor related data for software ID tag. This is a foreign key into the SoftwareIsoTagEntity table.
TagCreatorEntityID	<i>Type:</i> integer. Key. Nullable
	The tag creator related data for software ID tag. This is a foreign key into the SoftwareIsoTagEntity table.
OriginalArpGuid	<i>Type:</i> text (max 200 characters). Nullable
	The original GUID of add-remove programs values of a repackaged software.
OriginalArpPublisher	<i>Type:</i> text (max 200 characters). Nullable
	The original publisher of add-remove programs values of a repackaged software.
OriginalArpDisplayName	<i>Type:</i> text (max 200 characters). Nullable
	The original display name of add-remove programs values of a repackaged software.
OriginalArpDisplayVersion	<i>Type:</i> text (max 200 characters). Nullable
	The original display version of add-remove programs values of a repackaged software.
CurrentArpGuid	<i>Type:</i> text (max 200 characters). Nullable
	The current GUID of add-remove programs values of a repackaged software.

Database Column	Details
CurrentArpPublisher	<i>Type:</i> text (max 200 characters). Nullable The current publisher of add-remove programs values of a repackaged software.
CurrentArpDisplayName	<i>Type</i> : text (max 200 characters). Nullable The current display name of add-remove programs values of a repackaged software.
CurrentArpDisplayVersion	<i>Type:</i> text (max 200 characters). Nullable The current display version of add-remove programs values of a repackaged software.
AdminStudioAppCatalogID	<i>Type:</i> text (max 200 characters). Nullable Application catalog ID of a repackaged application in AdminStudio.
IsValidSchema	<i>Type:</i> boolean. Nullable Whether the software id tag has valid schema.
IsValidSignature	<i>Type</i> : boolean. Nullable Whether the software id tag has valid digital signature.
ActivationStatus	<i>Type</i> : text (max 50 characters). Nullable The activation status value of software ID tag.
ChannelType	<i>Type</i> : text (max 200 characters). Nullable The channel type value of software ID tag.
SerialNumber	<i>Type</i> : text (max 200 characters). Nullable The serial number value of software ID tag.
ParseErrorMessage	<i>Type</i> : text (max 1000 characters). Nullable The message of the error occured while reading the software iso tag file.

SoftwareIsoTagSoftwareVersion Table

The SoftwareIsoTagSoftwareVersion table provides property names and values for each software ID tag unique product related data.

Table 806: Database columns for SoftwareIsoTagSoftwareVersion table

Database Column	Details
SoftwareIsoTagSoftware	<i>Type:</i> integer. Key. Generated ID
VersionID	The SoftwareIsoTagSoftwareVersion table unique ID for each records.
TagCreatorEntityID	<i>Type:</i> integer. Key
	The tag creator related data for software ID tag. This is a foreign key into the SoftwareIsoTagEntity table.
TagSoftwareUniqueID	<i>Type:</i> integer. Key. Nullable
	The software unique ID related data for software ID tag. This is a foreign key into the SoftwareIsoTagUnique table.
ProductTitle	<i>Type:</i> text (max 200 characters). Key
	The product title value for software ID tag.
ProductVersionName	<i>Type:</i> text (max 200 characters). Key
	The product version name value for software ID tag.
ProductVersionMajor	<i>Type:</i> integer. Key
	The major version value of software ID tag.
ProductVersionMinor	<i>Type:</i> integer. Key
	The minor version value of software ID tag.
ProductVersionBuild	<i>Type:</i> integer. Key
	The build version value of software ID tag.
ProductVersionReview	<i>Type:</i> integer. Key
	The review version value of software ID tag.

SoftwareIsoTagUnique Table

The SoftwareIsoTagUnique table provides property names and values for each unique id on software ID tags.

Table 807: Database columns for SoftwareIsoTagUnique table

Database Column	Details
SoftwareIsoTagUniqueID	<i>Type:</i> integer. Key. Generated ID The SoftwareIsoTagUniqueID table unique ID for each records.
UniqueID	<i>Type</i> : text (max 200 characters). Key The unique ID value of a software ID tag.

SoftwareOccurrence Table

The SoftwareOccurrence table contains the list (by computer and user) of applications that are installed. The applications may not have been installed through FlexNet Manager Suite. The information is obtained from managed devices from:

- FlexNet Manager Suite packages cache
- Add/Remove Programs registry entries
- Microsoft Installer
- ProductVersion resource strings in program files, if files are tracked

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 808: Database columns for SoftwareOccurrence table

Database Column	Details
SoftwareOccurrenceID	<i>Type</i> : integer. Key. Generated ID
	The id for the software occurrence. This is automatically generated by SQL Server.
ComputerID	<i>Type</i> : integer. Key
	The computer on which the software was tracked. For user inventory, this is
	the computer that the user was logged on to at the time of the Generate
	Inventory event. This is a foreign key into the Computer table.
UserID	<i>Type</i> : integer. Key
	User for whom the SoftwareVersion was installed. This is a foreign key to
	the User table.

Database Column	Details
SoftwareID	<i>Type:</i> integer. Key
	The software that has been tracked. This is a foreign key to the SoftwareVersion table.
SoftwareDetailsID	<i>Type:</i> integer. Key
	The details that have been tracked. This is a foreign key to the SoftwareDetails table.
Evidence	<i>Type</i> : text (max 32 characters). Nullable
	An indication of how the software was determined to be on the managed device. The valid entries are:
	• msi
	• managesoft
	• uninstall
	exehdr (for file tracking only)
	dllhdr (for file tracking only)
PackagePathID	<i>Type:</i> integer. Key. Nullable
	FlexNet Manager Suite
	PackageFullName if known (not always!).
PolicyGUID	<i>Type:</i> binary (max 16 bytes). Nullable
	FlexNet Manager Suite
	Policy GUID if known.
InstallationDate	<i>Type:</i> datetime. Nullable
	The date and time that the software was installed.

SoftwareOccurrenceSoftwareIsoTagFile Table

The SoftwareOccurrenceSoftwareIsoTagFile table is link table joining records in SoftwareOccurrence and SoftwareIsoTagFile tables.

Database Column	Details
SoftwareOccurrence SoftwareIsoTagFileID	<i>Type:</i> integer. Key. Generated ID The SoftwareOccurrenceSoftwareIsoTagFile table unique ID for each records.
SoftwareOccurrenceID	<i>Type:</i> integer. Key This is a foreign key into the SoftwareOccurrence table.
SoftwareIsoTagFileID	<i>Type:</i> integer. Key This is a foreign key into the SoftwareIsoTagFile table.

 Table 809:
 Database columns for SoftwareOccurrenceSoftwareIsoTagFile table

SoftwareProperty Table

The SoftwareProperty table contains a record for each unique property name captured in inventory.

Database Column	Details
SoftwarePropertyID	<i>Type:</i> integer. Key. Generated ID The id for the software property. This is automatically generated by SQL Server.
Property	<i>Type:</i> text (max 256 characters). Key The software property. A single software object can have many properties.

SoftwareValue Table

The value of a specified SoftwareProperty of the specified SoftwareOccurrence.

Table 811: Database colum	nns for SoftwareValue table
---------------------------	-----------------------------

Database Column	Details
SoftwareOccurrenceID	<i>Type:</i> integer. Key Object.

Database Column	Details
SoftwarePropertyID	<i>Type:</i> integer. Key Property.
Value	<i>Type:</i> text (max 256 characters). Nullable Property value.

SoftwareVersion Table

The SoftwareVersion table contains a record for each software name/version combination returned through inventory. The software names and versions are gathered from places such as Add/Remove Programs on managed devices. They do not represent package names and versions from the software library, although correlation is likely.

Table 812: Database columns for SoftwareVersion tak	ole
---	-----

Database Column	Details
SoftwareID	<i>Type:</i> integer. Key. Generated ID
	The id for the software version. This is automatically generated by SQL Server.
SoftwareName	<i>Type:</i> text (max 128 characters). Key
	The name of the software defined by the vendor.
Version	<i>Type:</i> text (max 32 characters). Key
	The version of the software defined by the vendor.
CreationDate	<i>Type:</i> datetime. Key
	The creation date of the SoftwareVersion which will be used to cleanup the older unused records.

VirtualDesktopAccess Table

A VDI device a User has accessed on an end-point.

Table 813: Database columns for VirtualDesktopAccess table

Database Column	Details
ComputerID	<i>Type:</i> integer. Key
	The end-point ComputerID. This is a foreign key into the Computer table.
UserID	<i>Type:</i> integer. Key
	The ID for the user accessing the VDI device. This is a foreign key into the User table.
MachineName	<i>Type:</i> text (max 64 characters). Key
	Computer name of the VDI device.
MachineDomain	<i>Type:</i> text (max 256 characters). Key. Nullable
	Fully qualified domain of the VDI device.
VDITemplateName	<i>Type:</i> text (max 256 characters). Key
	The template from which the VDI device was cloned.
Туре	<i>Type:</i> text (max 64 characters). Key
	The type of VDI.
LogonTime	<i>Type:</i> datetime. Key
	The time the user logged on to the VDI device.
VirtualDesktopAccessID	<i>Type:</i> integer. Key. Generated ID
	The ID of the user session to the VDI device.

VirtualDesktopApplicationUsage Table

A virtualized application is used from VDI.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 814: Database columns for VirtualDesktopApplicationUsage table

Database Column	Details
VirtualDesktop	<i>Type:</i> integer. Key. Generated ID
ApplicationUsageID	The ID of the application usage record.

Database Column	Details
VirtualDesktopAccessID	<i>Type:</i> integer. Key
	The ID of the corresponding VDI access record. This is a foreign key into the VirtualDesktopAccess table.
Name	<i>Type:</i> text (max 64 characters). Key
	The display name of the virtual application.
Version	<i>Type:</i> text (max 16 characters). Key
	The version of the virtual application.
PackageGUID	<i>Type</i> : unique identifier. Key
	The GUID of the package that the virtual application is associated with.
LastLaunchOnSystem	<i>Type:</i> datetime
	The last date and time that the virtual application was launched.
AccessMode	<i>Type:</i> text (max 100 characters). Key
	The access mode for the application.

VirtualDesktopGroupAccess Table

A user with access to a particular VDI Group for a given site.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 815: Database columns for VirtualDesktopGroupAccess table

Database Column	Details
VDISiteName	<i>Type:</i> text (max 256 characters). Key the VDI Site.
VDIGroupName	<i>Type:</i> text (max 256 characters). Key The name of the VDI Group.
Sid	<i>Type:</i> text (max 512 characters). Key. Nullable The Sid of the user.
VDIBrokerType	<i>Type:</i> text (max 64 characters). Key The type of VDI infrastructure.

VirtualDesktopGroupAccessScan Table

The last scan time of the VDI to retrieve ACL information

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 816: Database columns for VirtualDesktopGroupAccessScan table

Database Column	Details
VDIBrokerType	<i>Type:</i> text (max 64 characters). Key The type of VDI.
VDISiteName	<i>Type:</i> text (max 256 characters). Key The VDI Site.
ScanTime	<i>Type:</i> datetime The VDI Site.

Licensing Tables

The complete set of database tables documented here includes:

- LicenseAllocation table (see LicenseAllocation Table)
- LicenseModel table (see LicenseModel Table)
- LicensePurchase table (see LicensePurchase Table)
- ProductContainsSoftware table (see ProductContainsSoftware Table)
- SoftwareProduct table (see SoftwareProduct Table)
- SoftwarePublisher table (see SoftwarePublisher Table)
- SoftwareReseller table (see SoftwareReseller Table)

LicenseAllocation Table

The LicenseAllocation table specifies the allocation of licenses for each organizational unit. The same licensable product definition (from SoftwareProduct) may have license allocations for more than one organizational unit.

Table 817: Database columns for LicenseAllocation table

Database Column	Details
AllocationID	<i>Type:</i> integer. Key. Generated ID Unique identifier for the license allocation record. This is automatically generated by SQL Server.
SoftwareProductID	<i>Type:</i> integer. Key The license that maps to an application. This is a foreign key into the SoftwareProduct table.
OrganizationID	<i>Type:</i> integer. Key Id of the organizational unit to which the software is allocated.
UnitsAllocated	<i>Type:</i> integer. Nullable The number of units allocated for the application.
Expiry	<i>Type:</i> datetime. Nullable The date and time that the license allocation expires.

LicenseModel Table

The LicenseModel table defines the license models available (for example, Site license). Each licensable product (listed in SoftwareProduct) is assigned a license model. A license model may apply to multiple licensable products.

Table 818: Database columns for LicenseModel table

Database Column	Details
ModelID	<i>Type:</i> integer. Key. Generated ID The unique identifier for a license model.
Name	<i>Type:</i> text (max 256 characters). Key The name of the license model.

LicensePurchase Table

LicensePurchase records details of purchases of licenses for a specified SoftwareProduct.

Database Column	Details
SoftwareProductID	<i>Type:</i> integer. Key
	The SoftwareProduct purchased.
ResellerID	<i>Type:</i> integer. Key
	The Reseller from which the software product was purchased.
OrganizationID	<i>Type:</i> integer. Key
	The organizational unit that owns the license for the product.
Purchased	<i>Type:</i> datetime. Key
	When the purchase was made.
Expires	<i>Type</i> : datetime. Nullable
	When the license expires.
Price	<i>Type:</i> integer. Nullable
	The price paid for the license.
Quantity	<i>Type:</i> integer
	Number of units licensed.
OrderNumber	<i>Type:</i> text (max 32 characters). Key
	Cross-reference to customer's purchase order number.

Table 819: Database columns for LicensePurchase table

ProductContainsSoftware Table

The ProductContainsSoftware table lists the applications returned by inventory (in the SoftwareVersion table) that are covered by licensable products (listed in SoftwareProduct). A license can map to multiple applications: if any of these applications is installed, a license is required.

Table 820: Database columns for ProductContainsSoftware table

Database Column	Details
SoftwareProductID	<i>Type:</i> integer. Key
	The license that maps to an application. This is a foreign key into the SoftwareProduct table.
SoftwareVersionID	<i>Type:</i> integer. Key
	The application maps to the license. This is a foreign key into the
	SoftwareVersion table.

SoftwareProduct Table

The SoftwareProduct table contains all of the licensable products (license definitions) for an organization. It represents all of the license agreements available for monitoring.

Table 821: Database columns for SoftwareProduct table

Database Column	Details
SoftwareProductID	<i>Type:</i> integer. Key. Generated ID
	This is a unique identifier for the software product.
ProductName	<i>Type:</i> text (max 256 characters). Key
	The name of the license. This normally corresponds to the name of the software product as defined by the vendor.
ModelID	<i>Type:</i> integer. Key
	Reference to the Licensing model for FlexNet Manager Suite
TrackedByID	<i>Type:</i> integer
	In what units are Licences counted?
PublisherID	<i>Type:</i> integer. Key
	Reference to publisher
Agreement	<i>Type:</i> text (max 256 characters)
	A URL to the license agreement for the product.[Comments]
Comments	<i>Type:</i> text. Nullable
	Additional comments

SoftwarePublisher Table

The SoftwarePublisher table lists application publishers (for example, Microsoft). Each licensable product (listed in SoftwareProduct) is assigned a publisher. A publisher may be assigned to multiple licensable products.

Table 822: Database columns for SoftwarePublisher table

Database Column	Details
PublisherID	<i>Type:</i> integer. Key. Generated ID The unique identifier for a publisher.
Name	<i>Type:</i> text (max 256 characters). Key The name of the publisher.

Database Column	Details
SupportURL	<i>Type:</i> text (max 256 characters) The support URL.
SupportPhone	<i>Type:</i> text (max 256 characters) The support phone number.
ContactName	<i>Type:</i> text (max 256 characters) The name of the contact.
Comments	<i>Type:</i> text (max 512 characters) An arbitrary comment about the publisher.

SoftwareReseller Table

The SoftwareReseller table lists application resellers (usually the organization listed on the purchase order for the product). Each licensable product (listed in SoftwareProduct) is assigned an application reseller. A reseller may be assigned to multiple licensable products.

Table 823: Database columns for SoftwareReseller table

Database Column	Details
ResellerID	<i>Type:</i> integer. Key. Generated ID Auto-generated identifier of Reseller
Name	<i>Type:</i> text (max 256 characters). Key The name of the reseller.
ContactName	<i>Type:</i> text (max 256 characters) The name of the sales contact.
ContactPhone	<i>Type:</i> text (max 256 characters) The contact phone number.
Comments	<i>Type</i> : text (max 512 characters) An arbitrary comment about the reseller.

ManageSoft Tables

The complete set of database tables documented here includes:

• DatabaseConfiguration table (see DatabaseConfiguration Table)

DatabaseConfiguration Table

The DatabaseConfiguration table contains configuration properties for the FlexNet Manager Suite database tables, which are used for ongoing maintenance of the database.

Database Column	Details
Property	<i>Type</i> : text (max 32 characters). Key The name of the property.
Value	<i>Type:</i> text (max 256 characters) The value of the property.
Created	<i>Type:</i> datetime The date and time the property was created.
LastUpdate	<i>Type</i> : datetime The date and time the property was last updated.

Networking Tables

The complete set of database tables documented here includes:

- NetworkLocation table (see NetworkLocation Table)
- Subnet table (see Subnet Table)

NetworkLocation Table

The Location table contains data about Locations

Table 825: Database	columns for	[•] NetworkLocation	table
---------------------	-------------	------------------------------	-------

Database Column	Details
NetworkLocationID	<i>Type:</i> integer. Key. Generated ID The ID for the Location
Name	<i>Type:</i> text (max 256 characters). Key The name of the Location

Database Column	Details
DN	<i>Type</i> : text (max 1024 characters). Key. Nullable
	The Distinguished name of the Location
AutoPopulated	<i>Type</i> : boolean
	Specifies whether the row was populated automatically(1) or manually(0).
Enabled	<i>Type</i> : boolean
	Specifies whether the row will be used when mapping domains and devices to Locations
DomainID	<i>Type</i> : integer. Key
	DomainID of the domain in which the NetworkLocation resides

Subnet Table

The Subnet table contains data about subnets in a location.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 826: Database columns for Subnet table

Database Column	Details
SubnetID	<i>Type:</i> integer. Key. Generated ID
	The ID for the Subnet
IPSubnet	<i>Type:</i> text (max 64 characters). Key
	The IPSubnet of the Subnet
IPSubnetMask	<i>Type:</i> text (max 64 characters). Key
	The IPSubnetMask of the Subnet
NetworkLocationID	<i>Type:</i> integer. Key
	NetworkLocationID of the NetworkLocation in which the Subnet resides
AutoPopulated	<i>Type:</i> boolean
	Specifies whether the row was populated automatically(1) or manually(0).
Enabled	<i>Type:</i> boolean
	Specifies whether the row will be used when mapping domains and devices
	to Locations

Packaging Tables

The complete set of database tables documented here includes:

- Architecture table (see Architecture Table)
- FileNameMap table (see FileNameMap Table)
- Media table (see Media Table)
- MediaContainsPackagePath table (see MediaContainsPackagePath Table)
- MediaContainsPackageVersion table (see MediaContainsPackageVersion Table)
- MediaType table (see MediaType Table)
- PackageFamily table (see PackageFamily Table)
- PackagePath table (see PackagePath Table)
- PackagePathType table (see PackagePathType Table)
- PackageProvides table (see PackageProvides Table)
- PackageRequires table (see PackageRequires Table)
- PackageState table (see PackageState Table)
- PackageVersion table (see PackageVersion Table)
- PackageVersionArchitecture table (see PackageVersionArchitecture Table)
- PackageVersionEnvironment table (see PackageVersionEnvironment Table)
- PackageVersionInState table (see PackageVersionInState Table)
- PackageVersionLocale table (see PackageVersionLocale Table)

Architecture Table

Architecture identifies a target CPU (ABI), used to identify on what type of computer a package may be installed.

Table 827: Database	e columns for	r Architecture table	
---------------------	---------------	----------------------	--

Database Column	Details
ArchitectureID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
ArchitectureName	<i>Type:</i> text (max 64 characters). Key Name of the computer architecture

FileNameMap Table

Stores mappings from a file on disk to a filename that will be used on the managed device. Currently used by the HPUX wizards to rename files that have non-Windows conforming names.

Table 828: Database columns for FileNameMap table

Database Column	Details
MediaID	<i>Type</i> : integer. Key The Media that the SourceFile exists on.
SourceFile	<i>Type:</i> text (max 256 characters). Key The file to be renamed.
DestFile	<i>Type</i> : text (max 256 characters) The final file name.
IsFile	<i>Type:</i> boolean Boolean field that specifies whether the row refers to a file or a directory.

Media Table

Packages are stored on Media identified in this table.

Table 829: Database columns for Media table

Database Column	Details
MediaID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number, 1 = local administration server.
Title	<i>Type</i> : text (max 128 characters). Key Name of media (empty for local administration server).
MediaTypeID	<i>Type:</i> integer. Key What type of media?
Location	<i>Type:</i> text (max 256 characters). Nullable Where on the media?

MediaContainsPackagePath Table

This table identifies which Media contains which PackagePath. A record exists here at least for every PackagePath currently in the local administration server.

 Table 830:
 Database columns for MediaContainsPackagePath table

Database Column	Details
MediaID	<i>Type:</i> integer. Key What Media contains the package?
PackagePathID	<i>Type:</i> integer. Key What PackagePath?

MediaContainsPackageVersion Table

This table identifies which Media contains which PackageVersion. A record exists here at least for every PackageVersion currently in the local administration server.

 Table 831: Database columns for MediaContainsPackageVersion table

Database Column	Details
MediaID	<i>Type:</i> integer. Key What Media contains the package?
PackageVersionID	<i>Type:</i> integer. Key What PackageVersion?

MediaType Table

Packages are stored on Media of various types. This table contains a record for each type.

Database Column	Details
MediaTypeID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number, 1 = Warehouse (administration server).
Description	<i>Type:</i> text (max 128 characters). Key Media type name (for example: Warehouse, Filesystem, CD).

Table 832:	Database	columns	for	MediaType table
	Dutubusc	columns	101	neurunype tuble

PackageFamily Table

PackageFamily is a short name used by the client to decide where a package to be downloaded to and whether it's an upgrade or downgrade of a previous package. Only one package version of a family may be installed in a given context.

Table 833: Database columns for PackageFamily table

Database Column	Details
PackageFamilyID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
PackageName	<i>Type:</i> text (max 64 characters). Key Package family name

PackagePath Table

Package Path identifies a filesystem path where the package will be stored in the software library and in transit. As such, the administration server and each distribution server may only contain a single package version having a given Path

Table 834: Database columns for PackagePath table

Database Column	Details
PackagePathID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
PackageFullName	Type: text (max 256 characters). Key. Nullable
	Package Path string
ParentPathID	<i>Type:</i> integer. Key. Nullable
	When a package is a variant of a parent package, this contains a reference to the parent package's path.
PackagePathTypeID	<i>Type:</i> integer
	The type of PackagePath that this row represents.

PackagePathType Table

This table contains the list of different types of packages, which also corresponds to the main areas in the Software Library.

Database Column	Details
PackagePathTypeID	<i>Type</i> : integer. Key. Generated ID Auto-generated identity number

Database Column	Details
Description	<i>Type:</i> text (max 128 characters). Key This describes the type of the package

PackageProvides Table

PackageProvides is used when a package can satisfy a virtual dependency, like "web-browser".

 Table 836:
 Database columns for PackageProvides table

Database Column	Details
PackageProvidesID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
PackageVersionID	<i>Type:</i> integer. Key The package which provides the interface
PackageFamilyID	<i>Type:</i> integer. Key The (virtual) package which is provided
Version	<i>Type</i> : text (max 32 characters). Key. Nullable The version provided, if necessary

PackageRequires Table

PackageRequires is used when a package requires another package or some other configuration, like a piece of hardware for example.

Database Column	Details
PackageVersionID	<i>Type:</i> integer. Key The PackageVersion which has the requirement.
RequiredType	<i>Type:</i> text (max 8 characters). Key Requirement type: for example, software, hardware.
RequiredObject	<i>Type:</i> text (max 64 characters). Key Required object: for example, PackageFamily name.
Strength	<i>Type:</i> integer. Nullable Strength of the requirement.

Database Column	Details
Property	<i>Type:</i> text (max 64 characters). Nullable The required property of the object (for example, package version).
Value	<i>Type:</i> text (max 64 characters). Nullable The value of the required property.
Match	<i>Type:</i> integer. Key How to match the required value.

PackageState Table

This table contains the package states that may be assigned to a package in the software library. The default set of states are based on ITIL release management processes.

Database Column	Details
PackageStateID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
Name	<i>Type:</i> text (max 64 characters). Key Package State Name
CanAddToPolicy	<i>Type:</i> boolean Whether a package in this state can be added to policy

Table 838: Database columns for PackageState table

PackageVersion Table

The PackageVersion table contains information about all of the packages in the software library. It is primarily used to map between Installation and PackageApplies for the purpose of comparing what users and computers should have versus what they actually have installed. This table only stores the details of one version of each package. This will change in future releases.

Table 839: Database columns for	PackageVersion table
---------------------------------	----------------------

Database Column	Details
PackageVersionID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number
PackagePathID	<i>Type</i> : integer. Key Reference to Path (Full name) of Package

Database Column	Details
Version	<i>Type</i> : text (max 32 characters). Key The version number of the package. The Installation table also has PackageName and Version columns. This value can be used to find the corresponding PackageFullName so that Installation can be mapped to PackageApplies.
Update	<i>Type</i> : text (max 64 characters). Key The current update (or patch) number of the package
PackageFamilyID	<i>Type</i> : integer. Key A managed device may only have one PackageVersion in a family.
Title	<i>Type:</i> text (max 64 characters). Nullable The friendly name for the package.
MD5	<i>Type</i> : text (max 40 characters). Nullable The MD5 digest of the project file (.ndp) for the package. This is updated in the database when the package is packed or distributed.
Size	<i>Type:</i> integer. Nullable If set, contains the size in bytes of the distributable form of the package
Category	<i>Type:</i> text (max 128 characters). Nullable A category or class used to group packages

PackageVersionArchitecture Table

PackageVersionArchitecture specifies all the architectures that a particular package version applies to.

Table 840: Database columns for PackageVersionArchitecture table

Database Column	Details
PackageVersionID	<i>Type:</i> integer. Key Foreign key into the PackageVersion table.
ArchitectureID	<i>Type</i> : integer. Key Foreign key into the Architecture table.

PackageVersionEnvironment Table

PackageVersionEnvironment specifies all the environments (operating systems) that a particular package version applies to.

Table 841: Database columns for PackageVersionEnvironment table

Database Column	Details
PackageVersionID	<i>Type:</i> integer. Key Foreign key into the PackageVersion table.
Environment	<i>Type:</i> text (max 128 characters). Key Name of the environment that is used in the package. This refers to the environments used in the Packer.

PackageVersionInState Table

This table contains a history of changes made to the state of a package. Note that the username is recorded as a nvarchar rather than a foreign key to the user table so that if a user is deleted, there is still a record of the changes that were made.

Table 842: Database columns for	PackageVersionInState table
---------------------------------	-----------------------------

Database Column	Details
PackageVersionID	<i>Type:</i> integer. Key
	The package that has been changed
PackageStateID	<i>Type:</i> integer. Key
	The state that was set
UserName	<i>Type:</i> text (max 64 characters). Key
	The user that made the state change
Changed	<i>Type:</i> datetime. Key
	The date/time that the change was made
Comments	<i>Type:</i> text (max 256 characters)
	A user defined set of comments relating to the state change

PackageVersionLocale Table

PackageVersionLocale specifies all the locales (language and country combinations) that a particular package version applies to.

 Table 843:
 Database columns for PackageVersionLocale table

Database Column	Details
PackageVersionID	<i>Type:</i> integer. Key Foreign key into the PackageVersion table.
LocaleCode	<i>Type:</i> text (max 6 characters). Key Foreign key into the Locale table.

ReferenceData Tables

The complete set of database tables documented here includes:

- Country table (see Country Table)
- Language table (see Language Table)
- Locale table (see Locale Table)

Country Table

Stores country information, including their ISO country code and English names.

Table 844: Database columns for Country table

Database Column	Details
CountryCode	<i>Type:</i> text (max 2 characters). Key The two letter country code.
Name	<i>Type</i> : text (max 128 characters). Key The english name of the country.

Language Table

Stores language information, including their English names, and various forms of language id.

Table 845: Database columns for Language table

Database Column	Details
LangCode3	<i>Type</i> : text (max 3 characters). Key The three letter language code.

Database Column	Details
LangCode2	<i>Type</i> : text (max 2 characters). Nullable The two letter language code.
EnglishName	<i>Type:</i> text (max 128 characters). Key The english name of the language.
LocalName	<i>Type:</i> text (max 128 characters). Nullable The name of the language, written in the local language.
MSLanguageID	<i>Type:</i> integer. Nullable The Microsoft language id, as specified in winnt.h in the Platform SDK.

Locale Table

Stores locale information, which consists of country and language combinations. Use the LocaleCode column as the foreign key into this table.

Table 846: Database	columns for	Locale table
---------------------	-------------	--------------

Database Column	Details
LocaleCode	<i>Type:</i> text (max 6 characters). Key
	A combination of the language code and country code, separated by a hyphen. If there is no country code, then there will be no hyphen added. This column MUST have the correct value when inserted, based on the values of the language and country codes.
LangCode3	<i>Type:</i> text (max 3 characters). Key
	The three letter language code.
CountryCode	<i>Type:</i> text (max 2 characters). Key. Nullable
	The two letter country code.
LocaleName	Type: text (max 128 characters)
	The name of the locale. For example, "English (United States)".
MSLocaleID	<i>Type:</i> integer. Nullable
	The Microsoft identifier for the locale. For example, 1033 for English (United States).

Rights Tables

The complete set of database tables documented here includes:

- ActionClass table (see ActionClass Table)
- PartitionType table (see PartitionType Table)
- Resource table (see Resource Table)

ActionClass Table

The types of action on a Resource for which rights may be granted or denied.

Table 847: Database	e columns for	ActionClass table
---------------------	---------------	-------------------

Database Column	Details
ActionClassID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number.
ActionClassName	<i>Type:</i> text (max 16 characters). Key The name of the ActionClass.

PartitionType Table

Some secured Resources may be partitioned. Partitions are used to grant rights to one part of a Resource excluding other parts, for example limiting rights so that the operator can access only certain distribution servers, organizational units, or areas in the software library. There are three types of partitioning, defined by entries in this table.

Table 848: Database columns for PartitionType table

Database Column	Details
PartitionTypeID	<i>Type:</i> integer. Key. Generated ID Auto-generated identity number.
PartitionTypeName	<i>Type:</i> text (max 32 characters). Key Name of the PartitionType.

Resource Table

Access rights are granted to the Resources defined in this table.

Table 849: Database columns for Resource table

Database Column	Details
ResourceID	<i>Type</i> : integer. Key. Generated ID Auto-generated identity number.
ResourceName	<i>Type:</i> text (max 16 characters). Key Name of the Resource.
PartitionTypeID	<i>Type:</i> integer. Nullable If not NULL, the type of partitioning used with this Resource.

ScriptResult Tables

The complete set of database tables documented here includes:

ComputerScriptResult table (see ComputerScriptResult Table)

ComputerScriptResult Table

This table are used to store recognition rules and their results

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ComputerID	<i>Type:</i> integer. Key
	The computer that the installation event occurred on. This is a foreign key into the Computer table.
RecognitionRule	<i>Type:</i> text (max 256 characters). Key
	The recognition rule.
Revision	<i>Type:</i> integer. Nullable
	The revision number of the recognition rule.
InventoryDate	<i>Type:</i> datetime
	The date the recognition rule ran.

D		<u> </u>	
Data	haco		lumn
Data	Dase		IUIIII

Details

Result

Type: text. Nullable

The result of the recognition rule script.

Status Tables

The complete set of database tables documented here includes:

AMTEventLog table (see AMTEventLog Table)

AMTEventLog Table

Records the entries in the AMT event log for a NetworkDevice.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 851: Database columns for AMTEventLog table

Database Column	Details
AMTEventLogID	<i>Type:</i> integer. Key. Generated ID
	Auto-generated identity number.
DeviceID	<i>Type:</i> integer. Key. Nullable
	NetworkDevice identity number.
Reported	<i>Type:</i> datetime
	Date and time the event log entry was reported at.
PETDeviceAddress	<i>Type:</i> small integer
	The device address from the PET message format.
PETEventSensorType	<i>Type:</i> small integer
	The event sensor type from the PET message format.
PETEventType	<i>Type:</i> small integer
	The event type from the PET message format.
PETEventOffset	<i>Type</i> : small integer
	The event offset from the PET message format.
PETEventSourceType	<i>Type:</i> small integer
	The event source type from the PET message format.

Database Column	Details
PETEventSeverity	<i>Type</i> : small integer The event severity from the PET message format.
PETSensorNumber	<i>Type</i> : small integer The sensor number from the PET message format.
PETEntity	<i>Type</i> : small integer The entity from the PET message format.
PETEntityInstance	<i>Type:</i> small integer The entity instance address from the PET message format.
PETEventData	<i>Type:</i> text (max 32 characters) The event data from the PET message format.

Targeting Tables

The complete set of database tables documented here includes:

• TargetType table (see TargetType Table)

TargetType Table

The TargetType table contains a row for each type of object that can be targeted in FlexNet Manager Suite.

Table 852: Database columns for TargetType table

Database Column Details TargetTypeID Type: integer. Key. Generated ID The ID for the target type: • Computers

- Users
- Group
- DistributionLocation
- DistributionServer
- Organization
- Assets
- Contracts
- Purchase orders
- Software licenses
- Software titles
- Compliance computers
- Compliance users
- Operators
- SAP system landscapes
- SAP systems
- SAP rule sets
- Discovered devices
- Beacon
- Vendor
- Device
- Rule
- Inventory connection
- FNMP Server
- Fast Import
- OLE DB Connection
- ORACLE Connection

Database Column Details

- XML
- Intermediate File
- ADSI Connection
- Web Service
- SQL Connection
- Software Title Evidence
- FNMEA Agent
- Installed Software
- Baseline Import

TargetTypeName *Type*: text (max 256 characters). Key The name of the target type.

Tenants Tables

The complete set of database tables documented here includes:

- FlexeraLicense table (see FlexeraLicense Table)
- Tenant table (see Tenant Table)

FlexeraLicense Table

The FlexeraLicense table contains the encoded contents of the Flexera Software licenses required for the tenants in the system. This table is also used by the system in the single-tenant setup where there is only one tenant.

Table 853: Database columns for FlexeraLicense table

Database Column	Details
TenantUID	<i>Type:</i> text (max 40 characters). Key The unique identifier of a tenant. A reference to the Tenant to which this license is attached.
License	<i>Type:</i> text The encoded contents of the Flexera Software license attached to a particular Tenant.

Database Column	Details
LicenseChecksum	<i>Type:</i> integer. Key The check sum of the license.
LicenseDetails	<i>Type:</i> XML. Nullable XML definition of the license details

Tenant Table

The Tenant table contains the details of each tenant in multitenant FlexNet Manager Suite database tables.

Table 854: Database columns for Tenant table

Database Column	Details
TenantID	<i>Type</i> : integer. Key. Generated ID
	The tenant ID in a multi-tenant database.
TenantUID	<i>Type:</i> text (max 40 characters). Key
	The unique identifier of a tenant. This identifier is used to identify the tenant
	in environments where tenant information is stored on multiple databases.
TenantName	<i>Type:</i> text (max 256 characters). Key
	The name of the tenant.
TenantDomain	<i>Type:</i> text (max 20 characters). Nullable
	The sub-domain to use for the tenant.
Comments	<i>Type:</i> text. Nullable
	Operator comments about this tenant record.
CreationUser	<i>Type</i> : text (max 128 characters). Nullable
	The operator who created the tenant record.
CreationDate	<i>Type</i> : datetime
	The date the tenant record was created.
UpdatedUser	<i>Type</i> : text (max 128 characters). Nullable
	The name of the operator who last updated the tenant record.
UpdatedDate	<i>Type</i> : datetime. Nullable
	The date the tenant record was last updated.

Usage Tables

The complete set of database tables documented here includes:

- ComputerUsage table (see ComputerUsage Table)
- SoftwareFileUsage table (see SoftwareFileUsage Table)
- SoftwareUsagePerWeek table (see SoftwareUsagePerWeek Table)

ComputerUsage Table

Each time usage information is received, the ComputerUsage table is updated with the current day's timestamp.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 855: Database columns for ComputerUsage table

Database Column	Details
ComputerID	<i>Type:</i> integer. Key The id of the computer this information applies to. This id is a foreign key to the Computer table. It forms part of the unique index that identifies each row of data.
UserID	<i>Type:</i> integer. Key The id of the user context in which the application was detected. This is a foreign key to the User table. It forms part of the unique index that identifies each row of data.
LastReported	<i>Type:</i> datetime. Nullable The date that the user last reported usage information from the specified computer.

SoftwareFileUsage Table

This table contains information about each file relevant to reporting software usage information on each computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 856: Database columns for SoftwareFileUsage table

Database Column	Details
SoftwareFileUsageID	<i>Type:</i> integer. Key. Generated ID
	Auto-generated identity number
ComputerID	<i>Type:</i> integer. Key
	The id of the computer this information applies to. This id is a foreign key to the Computer table. It forms part of the unique index that identifies each row of data.
UserID	<i>Type</i> : integer. Key
	The id of the user context in which the application was detected. This is a foreign key to the User table. It forms part of the unique index that identifies each row of data.
Version	<i>Type:</i> text (max 32 characters). Key
	The version of the software file defined by the vendor.
SoftwareFileNameID	<i>Type:</i> integer. Key
	The name of the file that was tracked, minus the path. This is a foreign key into the SoftwareFileName table.
LongName	<i>Type:</i> text (max 4000 characters). Nullable
	The full path and file that was tracked.
CompanyName	<i>Type:</i> text (max 50 characters). Key
	The company name of the software.
Description	<i>Type:</i> text (max 1024 characters). Key
	The file description of the software.
ProductName	<i>Type:</i> text (max 50 characters). Key
	The product name of the software file.
ProductVersion	<i>Type:</i> text (max 32 characters). Key
	The version of the product of the software file defined by the vendor.

SoftwareUsagePerWeek Table

Software usage information is stored in weekly batches. Information received by the server is stored in the SoftwareUsagePerWeek table. Each row in the table represents usage information received from a specified user, on a specified managed device, regarding usage of specified software, during the week where the Monday is the specified date.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

 Table 857: Database columns for SoftwareUsagePerWeek table

Database Column	Details
SoftwareUsagePerWeekID	<i>Type:</i> integer. Key. Generated ID
	Auto-generated identity number
ComputerID	<i>Type:</i> integer. Key
	The id of the computer this information applies to. This id is a foreign key to the Computer table. It forms part of the unique-clustered-index that identifies each row of data.
UserID	<i>Type:</i> integer. Key
	The id of the user context in which the application was detected. This id is a foreign key to the User table. It forms part of the unique-clustered-index that identifies each row of data.
SoftwareID	<i>Type:</i> integer. Key
	The id of the software that was used. This is a foreign key to the SoftwareVersion table. It forms part of the unique-clustered-index that identifies each row of data.
SoftwareFileUsageID	<i>Type:</i> integer. Key. Nullable
	The id of the software file usage that was used. This is a foreign key to the SoftwareFileUsage table. It forms part of the unique-clustered-index that identifies each row of data.
StartOfWeek	<i>Type</i> : datetime. Key
	The first day for the week. This date identifies the week that usage data applies to.
Duration	<i>Type</i> : integer. Nullable
	The total duration, in seconds, that the application was run. It represents the total spanning across many sessions.
ActiveTime	<i>Type:</i> integer. Nullable
	The total active time, in seconds, that the application was in the foreground. It represents the total spanning across many sessions.
Sessions	<i>Type</i> : integer. Nullable
	The number of sessions the in which the application was used within the week.

Database Column

Details

Days

Type: integer. Nullable

The number of distinct days the application was used within the week.

WakeOnLAN Tables

The complete set of database tables documented here includes:

- WakeOnLANDistributionJob table (see WakeOnLANDistributionJob Table)
- WakeOnLANStatus table (see WakeOnLANStatus Table)
- WakeOnLANTask table (see WakeOnLANTask Table)

WakeOnLANDistributionJob Table

Wake on LAN distribution jobs control the distribution of a Wake on LAN task to the nearest distribution server for the targeted managed devices. The status of these distribution jobs is stored in the WakeOnLANDistributionJob table. Each row in the table represents a Wake on LAN job, which is any Wake on

LAN task (or a subset of a Wake on LAN task), that has been distributed to a distribution server. Be aware: There can be multiple distribution jobs for a given Wake on LAN task.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
DistJobUID	<i>Type:</i> binary (max 16 bytes). Key
	A unique identifier for this distribution job.
TaskUID	<i>Type:</i> binary (max 16 bytes). Key
	A unique identifier for the task that created this distribution job. This is a
	foreign key linked to the TaskUID in the WakeOnLANTask table.
ServerUID	<i>Type:</i> binary (max 16 bytes). Key
	A unique identifier for the distribution server that this distribution job
	targets. This foreign key links to the ServerUID in the DistributionServer
	table.
State	<i>Type:</i> text (max 16 characters)
	The state of this distribution job. This can be one of the following values: +
	Pending + Failed + Success

Table 858: Database columns for WakeOnLANDistributionJob table

WakeOnLANStatus Table

All managed devices targeted by a Wake on LAN task have a status associated with them. The status of the managed devices is stored in the WakeOnLANStatus table. Each row in the table represents a managed device to be woken by a Wake on LAN task from a distribution job.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 859: Database colu	umns for WakeOnLANStatus table
--------------------------	--------------------------------

Database Column	Details
DistJobUID	<i>Type</i> : binary (max 16 bytes). Key A unique identifier for a distribution job. This foreign key links to the DistJobUID in the WakeOnLANDistributionJob table. It forms part of the unique index that identifies each row of data.
ComputerID	<i>Type:</i> integer. Key The id for the managed device. It forms part of the unique index that identifies each row of data.
State	 Type: text (max 16 characters) The state of this managed device. This can be one of the following values: Pending Failed Woken Awake

WakeOnLANTask Table

Wake on LAN tasks control any targeted managed devices. The details of these tasks are stored in the WakeOnLANTask table. Each row in the table represents a Wake on LAN task.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 860: Database columns for WakeOnLANTask table

Database Column	Details
TaskUID	<i>Type:</i> binary (max 16 bytes). Key A unique identifier for the task that created a Wake on LAN job.
FriendlyName	<i>Type:</i> text (max 400 characters) The descriptive name assigned to the Wake on LAN task.
StartTime	<i>Type:</i> datetime. Nullable The time at which the managed devices will be woken.

WorkFlow Tables

The complete set of database tables documented here includes:

- Action table (see Action Table)
- ActionApplies table (see ActionApplies Table)
- ActionState table (see ActionState Table)
- Job table (see Job Table)
- Task table (see Task Table)
- TaskSchedule table (see TaskSchedule Table)
- TaskType table (see TaskType Table)

Action Table

An Action arising from a Task, to be applied (possibly repeatedly) by an actor (often a distribution server) to a set of target devices.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 861: Database columns for Action table

Database Column	Details
ActionUID	<i>Type:</i> binary (max 16 bytes). Key The unique identifier for the Action.

Database Column	Details
TaskID	<i>Type:</i> integer. Key
	The Task which gave rise to this Action.
ServerUID	<i>Type:</i> binary (max 16 bytes). Key. Nullable
	True if this Action has been delegated to a distribution server.
JobUID	<i>Type:</i> binary (max 16 bytes). Key. Nullable
	The Job which instructed the DS to perform the Action, if the Job still exists.
ActionStateID	<i>Type</i> : integer
	.One of the action states defined in the ActionState table.
PackageVersionID	<i>Type:</i> integer. Nullable
	If Task is of type Distribution, a PackageVersion applies.
FailureReason	<i>Type</i> : text. Nullable
	If not empty, text describing the reason the Action failed.
LastUpdate	<i>Type:</i> datetime
	The last time that the ActionState was updated. This value is the UTC date
	time of the event.
DSVersion	<i>Type:</i> text (max 32 characters). Nullable
	The version of the DS used to execute the Action.

ActionApplies Table

An action applies/applied to this computer, which can be identified by its computer id, device id, DNS, IP or MAC address. One of the five related cross-references must be non-null. If more than one is non-null, precedence is applied top to bottom in the order documented below.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
ActionAppliesID	<i>Type:</i> integer. Key. Generated ID
	Auto-generated identity number

Table 862: Database columns for ActionApplies table

Database Column	Details
ActionUID	<i>Type:</i> binary (max 16 bytes). Key
	The Action which applies.
ComputerID	<i>Type:</i> integer. Key. Nullable
	The computer id of the device to which the Action applies. Index into the
	Computer table.
DeviceID	<i>Type:</i> integer. Key. Nullable
	Index into the NetworkDevice table for this device.
MACAddress	<i>Type</i> : text (max 18 characters). Key. Nullable
	The network hardware address of the device.
DNSName	<i>Type:</i> text (max 128 characters). Key. Nullable
	The DNS name of the device.
IPAddress	<i>Type:</i> text (max 64 characters). Key. Nullable
	The IP Address of the device.
ActionStateID	<i>Type:</i> integer
	One of the action states defined in the ActionState table.
FailureReason	<i>Type:</i> text. Nullable
	If not empty, text describing the reason the action failed.
LastUpdate	<i>Type:</i> datetime
	The last time that the state of this action was updated. This value is the UTC date-time of the event.

ActionState Table

All possible states for an action are reflected in a record here.

Table 863: Database columns for ActionState table

Database Column	Details
ActionStateID	<i>Type</i> : integer. Key. Generated ID The id for the action state.

Database Column	Details
ActionStateName	<i>Type:</i> text (max 32 characters). Key
	The name for the action state. Possible id-name pairs are:
	• 1 = Created
	• 2 = DistributionInProgress
	• 3 = DistributionFailed
	• 4 = Distributed
	• 5 = SchedulePending
	• 6 = ScheduledFailed
	• 7 = Scheduled
	• 8 = Applied
	• 9 = ApplyFailed
	• 10 = CancelPending
	• 11 = CancelFailed
	• 12 = Cancelled
	• 13 = NotSupported

Job Table

This table stores the information about the jobs.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 864: Database columns for Job table

Database Column	Details
JobUID	<i>Type:</i> binary (max 16 bytes). Key The unique id for the job.
TaskID	<i>Type:</i> integer. Key The id for the task.
ServerUID	<i>Type:</i> binary (max 16 bytes). Key The unique id for the server.

Task Table

This table stores the information about the tasks.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 865: Database columns for Task table

Database Column	Details
TaskID	<i>Type</i> : integer. Key. Generated ID The id of the task.
TaskUID	<i>Type:</i> binary (max 16 bytes). Key. Nullable The id of the task.
TaskTypeID	<i>Type</i> : integer The id for the task type.
TaskName	<i>Type</i> : text (max 128 characters). Key The name for the task.
PackagePathID	<i>Type:</i> integer. Key. Nullable For a distribution task, which package.
TaskScheduleID	<i>Type</i> : integer The id for the task schedule.
MinimumVersion	<i>Type</i> : text (max 16 characters). Nullable The minimum version required to execute the task.

TaskSchedule Table

This table stores the required information about the task schedule, such as the start and finish times number of retries, delays and other related information.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 866: Database columns for TaskSchedule table

Database Column	Details
TaskScheduleID	<i>Type</i> : integer. Key. Generated ID
	The id for the task schedule.
StartTime	<i>Type:</i> datetime. Nullable
	The time that the scheduled task must start.
EndTime	<i>Type:</i> datetime. Nullable
	The time that the scheduled task must end.
RetryCount	<i>Type</i> : integer. Nullable
	Number of times for task retries.
MinRetryDelay	<i>Type:</i> integer. Nullable
	Number of seconds before a retry occurs in case of a failure.
RepeatDelay	<i>Type:</i> integer. Nullable
	Number of seconds before the task is repeated.
NumParallelTasks	<i>Type:</i> integer. Nullable
	Number of tasks that can be run in parallel.
SleepBetweenTasks	<i>Type:</i> integer. Nullable
	Amount of time before the next task can start.

TaskType Table

This table stores the information about different types of tasks and their associated IDs.

Table 867: Database columns for TaskType table

Database Column	Details
TaskTypeID	<i>Type:</i> integer. Key. Generated ID The id for the task.
TaskTypeName	<i>Type</i> : text (max 32 characters). Key The name of the task.

7

License Portal Database Schema

This chapter describes additions made to the database schema for FlexNet Manager Suite to accommodate a separate licensing portal. With the entire product now presented in a web interface, this separation is entirely historical. The tables described in this chapter continue to appear in the database for all implementations.

Information Structure

The following information is provided about database tables. Items appear only when relevant to the database column, and are suppressed where they do not apply. Two of these items (shown bold) are columns in the following pages, and the remainder are displayed within the **Details**.

Item	Comment
Database Column	The name of the column in the SQL table.
Туре	The data type of the contents of the database column.
Size	For types that have a maximum capacity, the upper limit is provided in parentheses.
Кеу	The word "Key" appears when a column is a unique key field within the table. It is possible for several database columns to be part of the key, so that this indicator may appear for several columns in a table.
Generated ID	This indicates that a numeric ID is assigned by the database.
Nullable	If this indicator is present, the database column permits nulls.
Computed	This indicator appears for columns that are automatically computed by the database.
Default	If a column has a default value declared in the schema, this is specified at the end of the first set of details for the column.

Item

Comment

Details

Describes the data stored in the database column, including many of the indicators described above.

Compliance.ECM.Logic Tables

The complete set of database tables documented here includes:

- ComplianceActionHistory table (see ComplianceActionHistory Table)
- ComplianceActionHistoryResource table (see ComplianceActionHistoryResource Table)
- EcmSettings table (see EcmSettings Table)
- SoftwareLicenseUsageHistory table (see SoftwareLicenseUsageHistory Table)
- TrackGroup table (see TrackGroup Table)
- TrackSoftwareLicenseUsage table (see TrackSoftwareLicenseUsage Table)
- TrackSoftwareTitle table (see TrackSoftwareTitle Table)
- TrackSoftwareTitleUsage table (see TrackSoftwareTitleUsage Table)

ComplianceActionHistory Table

ComplianceActionHistory records actions performed in the Compliance portal on a contract or software license, including usage activation/deactivation.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 868: Database columns for ComplianceActionHistory table

Database Column	Details
ComplianceActionHistoryID	<i>Type:</i> integer. Key. Generated ID Unique identifier for the record.
ComplianceAction	<i>Type:</i> integer. Key
HistoryResourceID	Identifies the type of action performed. Foreign key to the ComplianceActionHistoryResource table.
History	<i>Type:</i> text Detailed information about the action performed.

Database Column	Details
HistoryParameters	<i>Type</i> : text Details of parameters changed and their changed values.
AssociatedObjectID	Type: integer
	The ID of the contract or license associated with the action.
AssociatedObjectName	<i>Type:</i> text (max 512 characters) The name of the contract or license associated with the action.
Comment	<i>Type:</i> text (max 1024 characters) Comments recorded about the change by the operator.
CreationUser	<i>Type</i> : text (max 512 characters) The username of the operator who made the change.
CreationDate	<i>Type:</i> datetime The date of the change.

ComplianceActionHistoryResource Table

ComplianceActionHistoryResource table stores string resources required by the ComplianceActionHistory table.

Database Column	Details
ComplianceAction	<i>Type:</i> integer. Key. Generated ID
HistoryResourceID	Unique identifier for each record. Possible values and the corresponding default strings that may be written into a history list are:
	• 1 = Payment made
	• 2 = Payment edited
	• 3 = Payment cancelled
	• 4 = Activated application usage tracking for contract
	• 5 = Deactivated application usage tracking for contract
	• 6 = Activated application usage tracking for software license
	• 7 = Deactivated application usage tracking for software license
	• 8 = Modified application usage tracking for software license
	• 9 = Modified application usage tracking for contract
	• 10 = Not defined
	• 11 = Obligated to pay: (amount)
	 12 = Actual amount was set to: (amount)
	 13 = Actual amount currency rate was set to: (rate)
	• 14 = Estimated amount was set to: (amount)
	• 15 = Estimated amount currency rate was set to: (rate)
	• 16 = Budgeted amount was set to: (amount)
	• 17 = Budgeted amount currency rate was set to: (amount)
	• 18 = Payment status was set to: (status)
	• 19 = Payment amount: (amount); Payment date: (date)
	• 20 = Payment date was set to: (date)
	• 21 = Software license: (license name)
	• 22 = Software title: (application name)
	• 23 = Contract: (contract name)
	• 24 = Tracked: (yes/no); Track group: (group); Track start date: (date); Track end date: (date)

• 25 = Applications tracked: (number).

Database Column	Details	
ResourceName	<i>Type:</i> text (max 256 characters). Key	
	The name of the resource that determines the text to display on the user interface.	
DefaultValue	<i>Type:</i> text (max 512 characters)	
	The default value to display if there is no resource string available to define the history action.	

EcmSettings Table

EcmSettings stores operator-specific settings for the Compliance portal.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 870: Database columns for EcmSettings table

Database Column	Details
EcmSettingID	<i>Type</i> : integer. Key. Generated ID
	A unique identifier for the record.
ComplianceOperatorID	<i>Type:</i> integer. Key
	An operator of the Compliance portal. Foreign key to the
	ComplianceOperator table.
SettingKey	<i>Type:</i> text (max 512 characters). Key
	A resource describing the operator setting.
SettingType	<i>Type:</i> text (max 512 characters)
	The data type of the operator setting.
SettingValueString	<i>Type:</i> text
	Serialized value of the operator setting.
LastUpdated	<i>Type:</i> datetime
	Date and time when this setting was last updated.

SoftwareLicenseUsageHistory Table

SoftwareLicenseUsageHistory records snapshots of software license utilization.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 871: Database	columns for	SoftwareLi	censeUsageHistor	y table
---------------------	-------------	------------	------------------	---------

Database Column	Details	
SoftwareLicenseUsage	<i>Type</i> : integer. Key. Generated ID	
HistoryID	A unique identifier for each record in this table.	
SnapshotDate	<i>Type:</i> datetime	
	Date that the snapshot was recorded and the projected usage was calculated.	
SoftwareLicenseID	<i>Type:</i> integer. Key	
	SoftwareLicenseID that identifies the software license. This field is a foreign	
	key to the SoftwareLicense table.	
NumberPurchased	<i>Type:</i> integer	
	Total number of licenses purchased, as of the Snapshot Date.	
NumberInstalled	<i>Type</i> : integer	
	Total number of installations for the license, as of the Snapshot Date.	
NumberUsedActual	<i>Type:</i> integer. Nullable	
	Total consumption of the license, as of the Snapshot Date. If application	
	usage is not being tracked, this field is blank.	
NumberUsedProjected	<i>Type:</i> integer. Nullable	
	The projected usage calculated for this license, based on patterns of usage over time.	

TrackGroup Table

The TrackGroup table contains a list of the different tracking groups that tracked computer belong to.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 872: Database columns for TrackGroup table

Database Column	Details	
TrackGroupID	 <i>Type:</i> integer. Key. Generated ID A unique identifier for each TrackGroup. Possible values and the corresponding default strings are: 1 = Sample 2 = Enterprise. 	
ResourceName	<i>Type</i> : text (max 50 characters). Nullable The name of the resource that determines the text to display on the user interface.	
GroupName	<i>Type:</i> text (max 64 characters). Key The default name of the TrackGroup. This is the value displayed if there is no resource string available to define the TrackGroup.	

TrackSoftwareLicenseUsage Table

TrackSoftwareLicenseUsage keeps track of usage for each license.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Database Column	Details
TrackSoftwareLicense UsageID	<i>Type:</i> integer. Key. Generated ID Unique identifier for each record.
SoftwareLicenseID	<i>Type:</i> integer. Key Identifies a license. This field is a foreign key to the SoftwareLicense table.
TrackGroupID	<i>Type:</i> integer. Key. Nullable Identifies the track group associated with the license. This field is a foreign key to the TrackGroup table.
SampleSize	<i>Type:</i> integer. Nullable Number of computers in sample group.

Database Column	Details
UsedPercentage	<i>Type</i> : decimal. Nullable Percentage of computers within the tracking group that reported use of applications associated with this license.
LastUpdated	<i>Type:</i> datetime Date and time when software license usage was updated.

TrackSoftwareTitle Table

TrackSoftwareTitle stores details related to tracking software usage for a software title.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 874: Database columns for TrackSoftwareTitle table

Database Column	Details
TrackSoftwareTitleID	<i>Type</i> : integer. Key. Generated ID
	Unique identifier for each record. This field is a foreign key to the SoftwareTitle table.
SoftwareTitleID	<i>Type:</i> integer. Key. Nullable
	Identifies the application for which usage is being tracked. This field is a foreign key to the SoftwareTitle table.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable
	Identifies the license associated with the application. This field is a foreign key to the SoftwareLicense table.
TrackGroupID	<i>Type</i> : integer. Key
	Identifies if usage tracking has been activated for the Sample or Enterprise tracking group. This field is a foreign key to the TrackGroup table.
LastTrackStartDate	<i>Type</i> : datetime. Nullable
	Date that tracking was last turned on.
LastTrackEndDate	<i>Type:</i> datetime. Nullable
	Date that tracking was last turned off. This field may be null if the operator cleared the end date when activating application usage.

Database Column	Details
TrackEndDueDate	<i>Type:</i> datetime. Nullable Date that the current tracking period ends. Should be null when IsTracked is False.
IsTracked	<i>Type:</i> boolean. Key Indicates whether usage tracking is enabled for this application entry.

TrackSoftwareTitleUsage Table

TrackSoftwareTitleUsage keeps track of whether licensed software is being used on a computer.

Note: To cater for multi-tenant mode, this table may contain data for multiple tenants. Access requires that the database TenantID has been set in the SQL Server connection context information. That setting filters an underlying table to produce this view of data for the single, selected tenant.

Table 875: Database columns f	or TrackSoftwareTitleUsage table
-------------------------------	----------------------------------

Database Column	Details
TrackSoftwareTitleUsageID	<i>Type:</i> integer. Key. Generated ID
	Unique identifier for each record.
ComplianceComputerID	<i>Type:</i> integer. Key
	Identifies the computer on which usage tracking details were recorded. This field is a foreign key to the ComplianceComputer table.
SoftwareTitleID	<i>Type:</i> integer. Key
	Identifier for the application that was installed on the computer. This field is a foreign key to the SoftwareTitle table.
SoftwareLicenseID	<i>Type:</i> integer. Key. Nullable
	Identifier for the license associated with the installed application on the computer. This field is a foreign key to the SoftwareLicense table.
TrackGroupID	<i>Type:</i> integer. Key. Nullable
	Identifies the track group to which the computer has been assigned.
IsUsed	<i>Type:</i> boolean. Nullable
	Indicates whether the application is used on the computer.
LastUsed	<i>Type:</i> datetime. Nullable
	Date and time when software was last used on computer.

Inventory Spreadsheet Templates

In contrast with other chapters in this document, this chapter takes a different approach: rather than documenting the schema of the central database for FlexNet Manager Suite, it describes the formats acceptable for spreadsheet (.xslx) or comma-separated value (.csv) files that can be used to import various kinds of inventory information into the central database. For each data element, it shows which database table, and which column in that table, is the final destination for the imported data. (For details about importing inventory as spreadsheets or CSV files, see the chapter *Importing Inventory Spreadsheets and CSV Files* in the companion volume, *FlexNet Manager Suite System Reference*.)

Such spreadsheet (including CSV) files can be imported through two different paths:

- Using the web interface for FlexNet Manager Suite, the data may be uploaded directly to the central application server(s) as a one-time upload
- Optionally with a repeatable schedule, the data may also be uploaded through an inventory beacon.

The same templates are used for inventory imports through either of these channels.

Information Structure for Spreadsheet Inventory Imports

The following information is provided about the structure of spreadsheet (.xslx) and comma-separated value (.csv) template files that can be prepared as a data source for importing inventory. The items listed below appear only when relevant to the spreadsheet column, and are suppressed where they do not apply. Four of these items (shown bold) are columns in the following pages, and the remainder are displayed within the **Details** column.

Below this key is a mapping between:

- The file name of the downloaded template
- The prompt in the web interface of FlexNet Manager Suite for upload of the completed spreadsheet
- The topic below that covers this data (topic names are driven by the underlying database schema).

③ Remember: The template files are fixed format. While adding data to each file, you may not change:

- The file name
- The names of columns
- The number of columns
- The order of columns.

Item	Comment
Column	The name of the column in the spreadsheet template (and uploaded data file).
	Important: Some column names are long, and must be wrapped over more than one line in this document. In all cases, the wrapped text should be continuous on a single line without white space in the template column names.
Example values	Some sample data, or in some cases the list of supported values. When such a list is present, ensure that each row has a value that is an exact match for one of the available values (except that the validation is case insensitive).
Details	Describes the data required in the spreadsheet column, including many of the indicators described below.
Туре	The data type of the contents of the spreadsheet column.
max	For types that have a maximum capacity, the upper limit is provided in parentheses.
Кеу	The word "Key" appears when a column is a unique key field for data matching between the row of the spreadsheet and the data in the central database table (the destination for the data). Keep in mind that a single spreadsheet may include data destined for multiple database tables; and even within a single database table, it is possible for several database columns to be part of the key. For these reasons, this indicator may appear in several rows in the documentation list.
Nullable	If this indicator is present, the spreadsheet column may be left blank (and the target database entity allows nulls). Be careful about spaces in a cell of your spreadsheet: white space is a valid value, and is not equivalent to a null.
Destination	Where the imported data is eventually saved in the central database for FlexNet Manager Suite. This is given with a dot separating the database table and the column name within the table, in the format <i>tableName.columnName</i> . For further details on these database tables and columns, see the other chapters in this volume.
	Tip: A single value in the imported spreadsheet may update data in more thar one database column. Where that happens, this Destination listing shows the multiple destinations for the individual row.

Mapping templates to topics

 $\langle \rangle$

The following table relates the template names (and the related prompts in the web interface) to the topics in this section that describe the individual columns within the templates. Templates are listed alphabetically. The naming of the following topics is driven by the related table names in the underlying database schema, so this list helps map the real world presentation to the database.

Tip: Templates are provided in matching pairs of XLSX and CSV files. As these are structurally identical, only the base file name (without an extension) is listed here.

Template file name	Web prompt	See topic
Cluster	Cluster evidence	ConsolidatedCluster Template
ClusterGroup	Cluster group data	ConsolidatedClusterGroup Template
ClusterHostAffinityRule	Cluster host affinity rule data	ConsolidatedClusterHostAffinityRule Template
Computer	Computers and VMs	ConsolidatedComputer Template
FileEvidence	File evidence	ConsolidatedFileEvidence Template
InstallerEvidence	Installation evidence	ConsolidatedInstallerEvidence Template
OracleDatabaseUser	Oracle Database user	ConsolidatedOracleDatabaseUser Template
RemoteAccessFile	Access shown by file evidence	ConsolidatedRemoteAccessFile Template
RemoteAccessInstaller	Access shown by installer evidence	ConsolidatedRemoteAccessInstaller Template
VMPool	Virtual machine pool data	ConsolidatedVMPool Template
WMIEvidence	WMI evidence	ConsolidatedWMIEvidence Template

Compliance.InventoryReader.Logic Tables

The complete set of database tables documented here includes:

- ConsolidatedAccessEvidence table (see ConsolidatedAccessEvidence Template)
- ConsolidatedCluster table (see ConsolidatedCluster Template)
- ConsolidatedClusterGroup table (see ConsolidatedClusterGroup Template)
- ConsolidatedClusterHostAffinityRule table (see ConsolidatedClusterHostAffinityRule Template)
- ConsolidatedComputer table (see ConsolidatedComputer Template)
- ConsolidatedFileEvidence table (see ConsolidatedFileEvidence Template)

- ConsolidatedInstallerEvidence table (see ConsolidatedInstallerEvidence Template)
- ConsolidatedOracleDatabaseUser table (see ConsolidatedOracleDatabaseUser Template)
- ConsolidatedRemoteAccessFile table (see ConsolidatedRemoteAccessFile Template)
- ConsolidatedRemoteAccessInstaller table (see ConsolidatedRemoteAccessInstaller Template)
- ConsolidatedVMPool table (see ConsolidatedVMPool Template)
- ConsolidatedWMIEvidence table (see ConsolidatedWMIEvidence Template)

ConsolidatedAccessEvidence Template

ConsolidatedAccessEvidence provides a simpler interface to specify client access happening on application installed on server computers. It combines the server computer, and its access evidence details into a single row.

Column	Details
ComputerID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the computer. It must match the ComputerID from the Computer spreadsheet or the row will be ignored.
	Destination:
	<pre>ImportedClientAccessedAccessEvidence.ImportedClient</pre>
	AccessedAccessEvidenceID
	<pre>ImportedClientAccessedAccessEvidence.ExternalServer</pre>
	ComputerID
	<pre>ImportedClientAccessedAccessOccurrence.ImportedClient</pre>
	AccessedAccessEvidenceID
ProductName	<i>Type:</i> text (max 256 characters). Key
	The product name of the software as reported by the access evidence.
	Destination:
	<pre>ImportedClientAccessEvidence.ExternalAccessEvidenceID</pre>
	<pre>ImportedClientAccessEvidence.ProductName</pre>
	<pre>ImportedClientAccessedAccessEvidence.ImportedClient</pre>
	AccessedAccessEvidenceID
	ImportedClientAccessedAccessEvidence.ExternalAccess EvidenceID
	<pre>ImportedClientAccessedAccessOccurrence.ImportedClient</pre>
	AccessedAccessEvidenceID

Table 876: Columns included with ConsolidatedAccessEvidence templates

Column	Details
Version	<i>Type:</i> text (max 72 characters). Key. Nullable
	The version of the software as reported by the access evidence.
	Destination:
	<pre>ImportedClientAccessEvidence.ExternalAccessEvidenceID</pre>
	ImportedClientAccessEvidence.Version
	ImportedClientAccessedAccessEvidence.ImportedClient AccessedAccessEvidenceID
	ImportedClientAccessedAccessEvidence.ExternalAccess EvidenceID
	ImportedClientAccessedAccessOccurrence.ImportedClient AccessedAccessEvidenceID
Edition	<i>Type:</i> text (max 50 characters). Key. Nullable
	The edition of the software as reported by the access evidence.
	Destination:
	ImportedClientAccessEvidence.ExternalAccessEvidenceID
	ImportedClientAccessEvidence.Edition
	ImportedClientAccessedAccessEvidence.ImportedClient AccessedAccessEvidenceID
	ImportedClientAccessedAccessEvidence.ExternalAccess EvidenceID
	ImportedClientAccessedAccessOccurrence.ImportedClient AccessedAccessEvidenceID
AccessingDeviceIPAddress	<i>Type:</i> text (max 256 characters). Key. Nullable
	IP Address of the accessing device.
	Destination:
	ImportedAccessingDevice.ExternalAccessingDeviceID
	ImportedAccessingDevice.IPAddress
	<pre>ImportedClientAccessedAccessEvidence.ImportedClient</pre>
	AccessedAccessEvidenceID
	ImportedClientAccessedAccessEvidence.ExternalAccessing DeviceID
	ImportedClientAccessedAccessOccurrence.ImportedClient AccessedAccessEvidenceID

Column	Details
AccessingDevice	<i>Type:</i> text (max 256 characters). Key. Nullable
ComputerName	IP Address of the device accessing the product.
	Destination:
	ImportedAccessingDevice.ExternalAccessingDeviceID
	ImportedAccessingDevice.ComputerName
	<pre>ImportedClientAccessedAccessEvidence.ImportedClient</pre>
	AccessedAccessEvidenceID
	ImportedClientAccessedAccessEvidence.ExternalAccessing
	DeviceID
	<pre>ImportedClientAccessedAccessOccurrence.ImportedClient</pre>
	AccessedAccessEvidenceID
AccessingDeviceSerialNo	<i>Type:</i> text (max 100 characters). Nullable
	Serial number of the device accessing the product.
	Destination:
	ImportedAccessingDevice.SerialNo
AccessingDeviceDomain	<i>Type:</i> text (max 100 characters). Key. Nullable
	Domain name of the device accessing the product.
	Destination:
	ImportedAccessingDevice.ExternalAccessingDeviceID
	ImportedAccessingDevice.Domain
	<pre>ImportedClientAccessedAccessEvidence.ImportedClient</pre>
	AccessedAccessEvidenceID
	ImportedClientAccessedAccessEvidence.ExternalAccessing DeviceID
	<pre>ImportedClientAccessedAccessOccurrence.ImportedClient AccessedAccessEvidenceID</pre>

Column	Details
AccessingUser	<i>Type:</i> text (max 128 characters). Key. Nullable
	The DOMAIN/SAMAccountName of the user accessing the product. Destination:
	ImportedAccessingUser.ExternalAccessingUserID
	<pre>ImportedAccessingUser.UserName (Element 2 after splitting on '\')</pre>
	<pre>ImportedAccessingUser.DomainName (Element 1 after splitting on '\')</pre>
	<pre>ImportedClientAccessedAccessEvidence.ImportedClient</pre>
	AccessedAccessEvidenceID
	${\tt ImportedClientAccessedAccessEvidence.ExternalAccessingUserID}$
	<pre>ImportedClientAccessedAccessOccurrence.ImportedClient AccessedAccessEvidenceID</pre>
AccessDate	<i>Type:</i> datetime. Key. Nullable
	The date that the product was accessed. The date must be specified in the following format: 'yyyyMMdd'.
	Possible values:
	• yyyy/MM/dd
	• yyyy/MM/dd HH:mm:Ss
	• yyyy/MM/dd HH:mm
	• yyyy-MM-dd
	• yyyy-MM-dd HH:mm:Ss
	• yyyy-MM-dd HH:mm
	• yyyyMMdd
	• yyyyMMdd HH:mm:Ss
	• yyyyMMdd HH:mm
	Destination:
	ImportedClientAccessedAccessOccurrence.AccessDate
	<pre>ImportedClientAccessedAccessOccurrence.LicenseDate</pre>
AccessCount	<i>Type:</i> integer. Nullable
	Number of times the product was accessed on the given access date.
	Destination:
	ImportedClientAccessedAccessOccurrence.AccessCount

Column	Details
InventoryDate	<i>Type</i> : datetime. Nullable The date (and optionally time) the access evidence record was inventoried. Possible values: • yyyy/MM/dd
	yyyy/MM/dd HH:mm:Ssyyyy/MM/dd HH:mm
	• yyyy-MM-dd
	yyyy-MM-dd HH:mm:Ssyyyy-MM-dd HH:mm
	yyyyMMddyyyyMMdd HH:mm:Ss
	• yyyyMMdd HH:mm Destination:
	ImportedClientAccessedAccessOccurrence.InventoryDate
ClientAccessSource	<i>Type</i> : text (max 100 characters). Nullable The source type of the access evidence. Destination: ImportedClientAccessedAccessEvidence.ClientAccessSource

ConsolidatedCluster Template

The Cluster spreadsheet provides a simple interface for defining server clustering. It is useful when combined with the ClusterGroup and ClusterHostAffinityRule spreadsheets.

Table 877: Columns included w	vith ConsolidatedCluster templates
-------------------------------	------------------------------------

Column	Details
ClusterID	<i>Type</i> : big integer. Key The unique identifier for this imported cluster. This may be a string or an integer. Destination: ImportedCluster.ExternalID

Column	Details
ClusterName	<i>Type:</i> text (max 128 characters)
	The name of the cluster in the external cluster management system.
	Destination:
	ImportedCluster.ExternalName
	ImportedCluster.Name
Namespace	<i>Type:</i> text (max 256 characters). Nullable
	Where the cluster is contained: + The fully-qualified domain name (for HyperV clusters) - example: 'france.thc.myenterprise.com' + The datacenter name (for VMWare clusters) - example: 'MelProdDataCenter'
	Destination:
	ImportedCluster.Namespace
ClusterType	<i>Type:</i> text (max 128 characters)
	The kind of cluster. The value must be an exact case-insensitive match to one of the permitted values.
	Possible values:
	vMotion Cluster
	Hyper-V Cluster
	Host Affinity Group
	VM Affinity Group
	Oracle VM
	Destination:
	ImportedCluster.ClusterTypeID

Column	Details
InventoryDate	<i>Type:</i> datetime. Nullable
	The date (with optional time) that the cluster last had inventory reported. The date must be entered in one of the supported formats. Possible values:
	 yyyy/MM/dd
	 yyyy/MM/dd HH:mm:Ss
	• yyyy-MM-dd
	• yyyy-MM-dd HH:mm:Ss
	• yyyy-MM-dd HH:mm
	• yyyyMMdd
	yyyyMMdd HH:mm:Ss
	• yyyyMMdd HH:mm
	Destination:
	ImportedCluster.InventoryDate
InventoryAgent	<i>Type:</i> text (max 64 characters). Nullable
	The name of the person or tool that performed the last inventory. For imported spreadsheets, you may wish to include the name of the person preparing the data, in case there is subsequent follow-up required.
	Destination:
	ImportedCluster.InventoryAgent
DRS	<i>Type</i> : boolean. Nullable
	Whether Distributed Resource Scheduler (DRS) is enabled on the cluster.
	Possible values:
	true, false, 0 or 1 Destination:
	ImportedCluster.DRS
M	<i>Type</i> : boolean. Nullable
DPM	Whether Distributed Power Management (DPM) is enabled on the cluster.
	Possible values:
	true, false, 0 or 1
	Destination:
	ImportedCluster.DPM

ConsolidatedClusterGroup Template

The ClusterGroup spreadsheet uses data from the Cluster spreadsheet and defines groups of servers as well as computers that are members of these groups.

Column	Details
ClusterID	<i>Type:</i> big integer. Key
	The unique identifier for the imported cluster. This may be a string or an integer and must match a value for the ClusterID in the cluster spreadsheet. Destination:
	ImportedClusterGroup.ClusterExternalID
ClusterGroupID	<i>Type:</i> big integer. Key
	The unique identifier for this cluster group. This may be a string or an integer.
	Destination:
	ImportedClusterGroup.ExternalID
	<pre>ImportedClusterGroupMember.ClusterGroupExternalID</pre>
ClusterGroupName	Type: text (max 128 characters). Nullable
	The name of the cluster group. Depending on the value of the ClusterGroupType this will be a group of hosts or virtual machines.
	Destination:
	ImportedClusterGroup.Name
ClusterGroupType	<i>Type:</i> text (max 128 characters)
	The kind of cluster included in the group. The value must be an exact case- insensitive match to one of the permitted values.
	Possible values:
	vMotion Cluster
	Hyper-V Cluster
	Host Affinity Group
	VM Affinity Group
	Oracle VM
	Destination:
	ImportedClusterGroup.ClusterTypeID

Table 878: Columns included with ConsolidatedClusterGroup templates

Column	Details
ComputerID	<i>Type:</i> big integer. Key
	The identifier used in the 'Computer' spreadsheet for a computer which is a member of the group. To identify all the members of the group, repeat as many lines as required in your spreadsheet where the other values in the row are identical, and only the 'ComputerID' value changes. Values in this column must match a ComputerID in the computer spreadsheet or the row will be skipped.
	Destination:
	<pre>ImportedClusterGroupMember.ComputerExternalID</pre>

ConsolidatedClusterHostAffinityRule Template

The ClusterHostAffinity spreadsheet defines the groups of virtual machines which may run on groups of host servers.

Column	Details
ClusterID	<i>Type:</i> big integer. Key
	The unique identifier for the imported cluster, to which this affinity rule applies. This may be a string or an integer and must match a ClusterID from the cluster spreadsheet.
	Destination:
	<pre>ImportedClusterHostAffinityRule.ClusterExternalID</pre>
Name	Type: text (max 128 characters). Nullable
	The name of the cluster host affinity rule.
	Destination:
	ImportedClusterHostAffinityRule.Name
ClusterHostGroupName	<i>Type:</i> big integer. Key
	The name of the group of hosts that the ClusterVMGroupName virtual machines may run on.
	Destination:
	ImportedClusterHostAffinityRule.ClusterHostGroupExternalID
ClusterVMGroupName	<i>Type</i> : big integer. Key
	The name of the virtual machine group that may run on the ClusterHostGroupName hosts.
	Destination:
	<pre>ImportedClusterHostAffinityRule.ClusterVMGroupExternalID</pre>

Column	Details
ClusterHostAffinity	<i>Type:</i> text (max 128 characters)
RuleType	The type of affinity rule. The value must be an exact case-insensitive match to one of the permitted values.
	Possible values:
	must run on
	must not run on
	Destination:
	<pre>ImportedClusterHostAffinityRule.ClusterHostAffinityRule</pre>
	TypeID

ConsolidatedComputer Template

'ConsolidatedComputer' consolidates data for the Computer, VirtualMachine, Domain, User and Cluster objects, providing a simpler way to populate this information. Any spreadsheet row that includes a 'HostComputerID' is making that row a virtual machine, and the import process expects that virtualization data will be provided.

Column	Details
ComputerID	<i>Type:</i> big integer. Key
	The unique identifier for a computer (either physical or virtual). This identifier can either be an integer or a string. Keep this consistent across multiple imports: it is used to track the computer over time.
	Destination:
	ImportedComputer.ExternalID
	ImportedVirtualMachine.VMComputerID
	<pre>ImportedClusterNode.ComputerExternalID</pre>
	<pre>ImportedCloudServiceInstance.ExternalComputerID</pre>
ComputerName	<i>Type</i> : text (max 256 characters)
	The name of the computer. In Windows, this is the NetBIOS name of the local computer, as returned by GetComputerName(). For UNIX, it is the host name of the machine, as returned by gethostname(2).
	Destination:
	ImportedComputer.ComputerName

Table 880: Columns included with ConsolidatedComputer templates

Column	Details
DomainFlatName	Type: text (max 100 characters). Key. Nullable
	The flatname of the domain of the computer. Example: 'mycompany'.
	Destination:
	ImportedDomain.FlatName
DomainQualifiedName	<i>Type:</i> text (max 100 characters). Key. Nullable
	The fully qualified domain name for the computer. Example: 'prod.mycompany.eu'.
	Destination:
	ImportedComputer.Domain
	ImportedDomain.QualifiedName
BIOSUUID	<i>Type:</i> unique identifier. Nullable
	The BIOS UUID of the computer (physical or virtual), as provided by the operating system.
	Possible values:
	93B5BE3B-88B0-450E-9F75-F6294210DFA0
	Destination:
	ImportedComputer.UUID
OperatingSystem	<i>Type:</i> text (max 128 characters). Nullable
	The operating system of the computer. For virtual machines, it is the configured operating system of the guest. Note that this operating system identification is not used for licensing.
	Destination:
	ImportedComputer.OperatingSystem
	ImportedVirtualMachine.GuestFullName
ServicePack	<i>Type</i> : text (max 128 characters). Nullable
	The service pack installed for the operating system.
	Destination:
	ImportedComputer.ServicePack
EmailAddress	<i>Type</i> : text (max 256 characters). Nullable
	The email address associated with the device. Typically used for mobile devices.
	Destination:
	ImportedComputer.EmailAddress

Column	Details
PhoneNumber	<i>Type</i> : text (max 128 characters). Nullable The phone number of the device. Used for mobile devices. Destination: ImportedComputer.PhoneNumber
Manufacturer	 <i>Type:</i> text (max 128 characters). Nullable The manufacturer of the computer hardware. Some examples include: On Windows, the SMBios manufacturer (the WMI Manufacturer property of the 'Win32_ComputerSystem' class).
	 On Linux, 'Manufacturer' in the 'System Information' section resulting from the 'dmidecode' command. Sample command: 'dmidecode -s system-manufacturer'
	 On Solaris x86, as for Linux, with failovers first to 'sysinfo SI_HW_PROVIDER' and then to 'ModelNo'.
	 On Solaris SPARC, the 'sysinfo SI_HW_PROVIDER'. Typically this value is 'Sun_Microsystems' or, more recently, 'Oracle Corporation'. Failover to the 'ModelNo'.
	• On HP-UX, the string literal 'HP'.
	 On AIX, the 'modelname' system attribute preceding the comma character. For example, if the 'modelname' system attribute is 'IBM,8202-E4B', then use 'IBM'. This value is typically 'IBM'.
	Destination:
	ImportedComputer.Manufacturer
	ImportedVirtualMachine.Manufacturer

Column	Details
ModelNo	<i>Type:</i> text (max 128 characters). Nullable
	The model of the computer hardware or the virtual machine. This value is defined for the context of the current execution environment, rather than the physical server that may be hosting a virtual machine or partition. Examples:
	 On Windows, the SMBios product name. The WMI Model property of the Win32_ComputerSystem class.
	 On Linux, the SMBios product name read using the command 'dmidecode -s system-product-name'. Specifically, the 'System Information' section and the 'Product Name' in that section is used.
	 On Solaris x86, as for Linux, with failover to the 'sysinfo SI_PLATFORM', stripping 'SUNW', and replacing hyphen characters with space characters.
	 On Solaris SPARC, the 'openprom' "banner-name" value read from '/dev/ openprom'. Failover to the 'sysinfo SI_PLATFORM', stripping 'SUNW', and replacing hyphen characters with space characters.
	On HP-UX, the 'confstr _CS_MACHINE_MODEL'.
	 On AIX, the 'modelname' system attribute following the comma character. For example, if the 'modelname' system attribute is 'IBM,8202-E4B', then use '8202-E4B'.
	Destination:
	ImportedComputer.ModelNo
	ImportedVirtualMachine.ModelNo

Column	Details
SerialNo	<i>Type:</i> text (max 100 characters). Nullable The hardware serial number of the computer. The goal of this value is to be tied to the physical hardware, partition or virtual machine and to be as unique as possible across all computers in the organization. This is due to its use in tracking computers, particularly after an operating system rebuild. This value is also used to socialize computer inventory from different inventory sources, and is used to map virtual machine guest operating system inventory to the VM host on which the virtual machine is running. Example sources:
	 On Windows, the SMBios serial number. The WMI 'SerialNumber' property of the 'Win32_BIOS' class. Can fail over to the 'SerialNumber' property of the 'Win32_SystemEnclosure' class which is typically the same value.
	 On Linux, the SMBios serial number read using the command 'dmidecode -s system-serial-number'. Specifically, the 'System Information' section and the 'Serial Number' in that section is used.
	• On Solaris 10 8/07 or later, for a non-global zone, the UUID value from the /etc/zones/index file. For a global zone, the same as Solaris 10 releases earlier than 8/07.
	• For Solaris 10 releases earlier than 8/07, the hexadecimal version of 'SI_HW_SERIAL' with an appended hyphen character followed by the Zone's name. For example, '838bfc7b-global' or '838bfc7b-myzone'.
	• For Solaris 8 and 9, The hexadecimal version of 'SI_HW_SERIAL'.
	 For Mac OS X, the serial number of the machine as printed on the packaging and found in "About this Mac" from the desktop.
	 For HP-UX, the 'confstr _CS_PARTITION_IDENT' partition identifier if it is an nPar or vPar, or '_CS_MACHINE_IDENT' if not; with a failover to the machine serial number, and a final failover to the 'uname' machine identification number.
	 For AIX, the 'id_to_partition' system attribute, starting from the third character (strips a '0X' from the start). For example, if the 'id_to_partition' system attribute is '0X0473409002F7B201' then use '0473409002F7B201'.
	Destination: ImportedComputer.SerialNo

Column	Details
ChassisType	<i>Type:</i> text (max 128 characters). Nullable
	The type of case of the computer. The value must be a (case insensitive) exact match for one of the values shown. Note that some license types use this information to optimize the licensing position, particularly with desktop and laptop computers. Destination: ImportedComputer.ChassisType
TotalMemory	<i>Type</i> : big integer. Nullable
	The total RAM in the computer, in bytes.
	Destination:
	ImportedComputer.TotalMemory
NumberOfDisplayAdapters	<i>Type:</i> integer. Nullable
	The number of graphics cards in the computer.
	Destination:
	ImportedComputer.NumberOfDisplayAdapters
VirtualMachineUUID	<i>Type:</i> text (max 256 characters). Nullable
	The unique identifier of the virtual machine provided by the virtualization infrastructure. (This may have the same value as the 'BIOSUUID', or have byte order reversed, or be altogether different.)
	Destination:
	ImportedVirtualMachine.UUID
IMEI	<i>Type:</i> text (max 256 characters). Nullable
	IMEI (International Mobile Equipment Identity) is a 15- or 17-digit code that uniquely identifies mobile phone sets. Leave blank (null) for other device types.
	Destination:
	ImportedComputer.IMEI
NumberOfProcessors	<i>Type</i> : integer. Nullable
	The total number of physical processors (CPU) in the computer. Note that a number of server-based licenses depend on complete details of the processor types, counts and speeds to calculate a correct license position.
	Destination:
	ImportedComputer.NumberOfProcessors
	ImportedVirtualMachine.NumberOfProcessors

Column	Details
ProcessorType	<i>Type:</i> text (max 256 characters). Nullable
	The descriptive string of the processor(s) in the computer. This may be a comma-separated list in the case where there is more than one physical processor in the system. Note that a number of server-based licenses depend on complete details of the processor types, counts and speeds to calculate a correct license position.
	Destination:
	ImportedComputer.ProcessorType
	ImportedVirtualMachine.ProcessorType
MaxClockSpeed	<i>Type</i> : integer. Nullable
	The maximum clock speed of the fastest processor in the computer in kHz. Note that a number of server-based licenses depend on complete details of the processor types, counts and speeds to calculate a correct license position.
	Destination:
	ImportedComputer.MaxClockSpeed
NumberOfCores	<i>Type:</i> integer. Nullable
	The total number of cores in the computer. If there is more than one physical processor in the computer, then this would be the sum of the core counts for all the processors. For example, in a computer with two quad- core processors, this value would be 8. Note that a number of server-based licenses depend on complete details of the processor types, counts and speeds to calculate a correct license position. Destination:
	ImportedComputer.NumberOfCores
	<pre>ImportedCloudServiceInstance.CoreCount</pre>
NumberOfSockets	<i>Type:</i> integer. Nullable
	The number of physical sockets into which a processor may be placed in the computer. It is rare that an inventory source can know this value. If unset, it is typically approximated by the number of processors. Destination:
	ImportedComputer.NumberOfSockets

Column	Details
NumberOfLogicalProcessors	<i>Type:</i> integer. Nullable
	The number of logical processors in the computer. This is the number of 'execution contexts' the operating system has access to. It will commonly be equivalent to the number processors in a single core, non-multi-threaded processor architecture, to the number of cores in a multi-core single threaded processor architecture, and to the number of threads in a multi-threaded processor architecture. For example, in a two processor, quad-core and hyper-threaded computer, this value would be 16. Note that a number of server-based licenses depend on complete details of the processor types, counts and speeds to calculate a correct license position. Destination:
	ImportedComputer.NumberOfLogicalProcessors
PartialNumberOfProcessors	<i>Type:</i> decimal. Nullable
	Used in processor-based licensing, this is the non-integer number of cores allocated to this partition or virtual machine. When this property is null, the 'NumberOfCores' is used. Note that a number of server-based licenses depend on complete details of the processor types, counts and speeds to calculate a correct license position.
	Possible values:
	120.45
	Destination:
	ImportedComputer.PartialNumberOfProcessors
NumberOfHardDrives	<i>Type:</i> integer. Nullable
	The number of physical hard drives in the computer. While the intent is physical drives, often this can end up being the number of disk partitions. Destination:
	ImportedComputer.NumberOfHardDrives
	ImportedVirtualMachine.NumberOfHardDrives
TotalDiskSpace	<i>Type:</i> big integer. Nullable
	The total size of all hard drives in the computer in bytes. Note that this can be a very large number on modern systems. The maximum value for a bigint is 9,223,372,036,854,775,807, which can represent about 9.2 exabyte. While in practice it is unlikely that this size of storage capacity is reached for a single system, some systems can end up with large values through virtualized drives. Therefore, it is worth considering capping values when calculating total disk space, particularly when converting values from kilobytes or megabytes to bytes.
	Destination:
	ImportedComputer.TotalDiskSpace

Column	Details
NumberOfNetworkCards	<i>Type</i> : integer. Nullable The number of network cards in the computer. Destination: ImportedComputer.NumberOfNetworkCards ImportedVirtualMachine.NumberOfNetworkCards
IPAddress	 Type: text (max 256 characters). Nullable The IP address of the computer in IPv4 or IPv6 format. This may be a comma-separated list if there is more than one active network adapter in the system. Do not include inactive network adapters and network adapters with invalid IP addresses. Examples: '69.89.31.226' '2002:4559:1FE2::4559:1FE2' Destination: ImportedComputer.IPAddress
MACAddress	Type: text (max 256 characters). Nullable The MAC address of the computer. This may be a comma-separated list if there is more than one active network adapter in the system. Do not include inactive network adapters and network adapters with invalid MAC addresses. Destination: ImportedComputer.MACAddress ImportedCloudServiceInstance.MACAddress
LastLoggedOnUser	<pre>Type: text (max 128 characters). Key. Nullable The DOMAIN/SAMAccountName of the user last logged onto the computer. Destination: ImportedComputer.LastLoggedOnUser ImportedUser.ExternalID ImportedUser.UserName (Element 2 after splitting on '\') ImportedUser.Domain (Element 1 after splitting on '\') ImportedUser.SAMAccountName (Element 2 after splitting on '\')</pre>

Column	Details
Column	Type: datetime. NullableThe date and time when the user last logged on to the computer. The date must be entered in one of the supported formats.Possible values:• yyyy/MM/dd• yyyy/MM/dd HH:mm:Ss• yyyy/MM/dd HH:mm• yyyy-MM-dd• yyyy-MM-dd HH:mm:Ss• yyyy-MM-dd HH:mm:Ss• yyyy-MM-dd HH:mm:Ss• yyyy-MM-dd HH:mm:Ss• yyyy-MM-dd HH:mm:Ss• yyyy-MM-dd HH:mm:Ss• yyyy-MM-dd HH:mm• yyyy-MM-dd HH:mm
CalculatedUser	 yyyyMMdd HH:mm Destination: <i>Type:</i> text (max 128 characters). Nullable The domain/SAMAccountName of the calculated user. Some inventory systems calculate the user who owns a computer. For example, it might be the user who, over the last ten logins, logged in most often.
HostComputerID	Destination: ImportedComputer.CalculatedUser <i>Type:</i> text (max 256 characters). Key. Nullable The ComputerID of the server this virtual machine is hosted on. This may be a string or an integer and must match the ComputerID for another computer in this spreadsheet. Destination: ImportedVirtualMachine.HostComputerID

Column	Details
VirtualMachineType	<i>Type</i> : text (max 100 characters). Nullable
	The type of the virtual machine. If present, the value must be a (case insensitive) exact match to one of the values shown.
	Possible values:
	VMware
	• HyperV
	• LPAR
	• WPAR
	• nPar
	• vPar
	• SRP
	• Zone
	• Unknown
	Oracle VM
	AWS EC2
	Destination:
	<pre>ImportedVirtualMachine.VirtualMachineType</pre>
VMEnabledState	<i>Type:</i> text (max 128 characters). Nullable
	The operational state of the virtual machine. If present, the value must be a (case insensitive) exact match to one of the values shown.
	Possible values:
	• Started
	• Stopped
	Suspended
	• Unknown
	• Terminated
	Destination:
	ImportedVirtualMachine.VMEnabledStateID
	<pre>ImportedCloudServiceInstance.VMEnabledStateID</pre>

Column	Details
AffinityEnabled	Type: boolean Set this to true (or 1) if this VM has affinity for its current host (so that it is unable to move to different host computers). Possible values: true, false, 0 or 1 Destination: ImportedVirtualMachine.AffinityEnabled
CPUAffinity	<i>Type:</i> text (max 256 characters). Nullable Contains a comma-separated list of processor numbers (Host Logical Processors) or ranges for which this virtual machine has affinity. Example: 1,3-5,8 Destination: ImportedVirtualMachine.CPUAffinity
CoreAffinity	Type: text (max 256 characters). Nullable Contains a comma-separated list of core numbers (or ranges) for which this virtual machine has affinity. Cores are numbered sequentially up the sequence of processors. Example: 1,5-8,10 Destination: ImportedVirtualMachine.CoreAffinity
ComplianceComputerType	<i>Type:</i> text (max 128 characters). Nullable If you know that the computer is a virtual machine or VM host, record that data here. If you are unsure, leave this cell empty (NULL): this allows the system to infer the computer type (for example, a computer with VMs linked to it is inferred to be a VM host). If data comes from multiple inventory sources, leaving this value as null also allows the value to be inserted from another source. So, unless there is a very good reason, do not just specify 'Computer', but allow the inference rules to help. Possible values: • Computer
	 Computer VM Host Virtual Machine Remote Device Mobile Device VDI Template Destination: ImportedComputer.ComplianceComputerTypeID

Column	Details
HostIdentifyingNumber	<i>Type</i> : text (max 128 characters). Nullable
	A physical server may have an identifier that is unique only across that hardware model, and may be less unique than the true hardware serial number, for example. This value is typically set for physical machines only, which include virtualization hosts, partitioned server hosts, and standalone machines. For a partitioned server, this value can be reported by each of the partitions on that server, such that a record of the physical computer can be created using one of the instances of this value. This value is used for matching computers. Destination:
HostType	<i>Type</i> : text (max 128 characters). Nullable
	The type of the physical host computer. This value is similar to the model number, but it is always for the physical server that an execution context may be running on. Therefore, this will generally be a known value for standalone machines and partitions, but it will not be known for virtual machines. This value is used for matching computers. Examples:
	• 'i86pc'
	• 'Sun-Fire-T1000'
	• 'rx7620'
	• '785' (for a 9000/785/C3700)
	• '8202' (for an IBM,8202-E4B).
	Destination:
VMLocation	<i>Type</i> : text (max 256 characters). Nullable
	Location of the virtual machine on the file system.
	Destination:
	ImportedVirtualMachine.VMLocation
PoolName	<i>Type</i> : text (max 100 characters). Nullable
	The name of the pool that the virtual machine belongs to.
	Destination:
	ImportedVirtualMachine.PoolName

Column	Details
PoolType	<i>Type:</i> text (max 100 characters). Nullable
	The type of the pool that the virtual machine belongs to.
	Possible values:
	• Folder
	Datacenter
	ComputeResource
	HostSystem
	ResourcePool
	VirtualMachine
	PhysicalSharedPool
	VirtualSharedPool
	• LPAR
	• RSET
	ClusterComputeResource
	• PSET
	Destination:
	ImportedVirtualMachine.PoolType
CPUUsage	<i>Type</i> : integer. Nullable
	The maximum CPU usage of the virtual machine (MHz).
	Destination:
	ImportedVirtualMachine.CPUUsage
MemoryUsage	<i>Type</i> : big integer. Nullable
	The maximum memory usage of the virtual machine (bytes).
	Destination:
	ImportedVirtualMachine.MemoryUsage

Column	Details
InventoryDate	<i>Type:</i> datetime. Nullable
	The date (and optionally time) the computer last had inventory reported. This field is generally used for differential updates (that is, if the date/time has not changed since the previous import, the data record is not imported/updated). The date must be entered in one of the supported formats.
	Possible values:
	• yyyy/MM/dd
	• yyyy/MM/dd HH:mm:Ss
	• yyyy/MM/dd HH:mm
	• yyyy-MM-dd
	• yyyy-MM-dd HH:mm:Ss
	• yyyy-MM-dd HH:mm
	• yyyyMMdd
	• yyyyMMdd HH:mm:Ss
	• yyyyMMdd HH:mm
	Destination:
	ImportedComputer.InventoryDate
	<pre>ImportedCloudServiceInstance.InventoryDate</pre>
ClusterID	<i>Type:</i> big integer. Key. Nullable
	The unique identifier for the cluster containing this computer. This must match the ClusterID used in the Cluster spreadsheet. If both the ClusterID and the ClusterNodeType do not match the data provided in the Cluster spreadsheet then the computer will not be associated with a cluster.
	Destination:
	ImportedClusterNode.ClusterExternalID

Column	Details
ClusterNodeType	<i>Type:</i> text (max 128 characters). Nullable
	The Cluster node type of the computer. Must be a (case insentitive) exact match for one of the values shown. If both the ClusterID and the ClusterNodeType do not match the data provided in the Cluster spreadsheet then the computer will not be associated with a cluster. Possible values:
	• Active
	Passive
	• Hot
	• Warm
	• Cold
	Destination:
	<pre>ImportedClusterNode.ClusterNodeTypeID</pre>
HostID	<i>Type:</i> text (max 100 characters). Nullable
	The HostID hardware property for the server hosting this machine partition (when inventorying a machine partition such as Solaris Zone, AIX IPar, HP-UX nPar/vPar).
	Destination:
	ImportedComputer.HostID
	ImportedCloudServiceInstance.HostID
FirmwareSerialNumber	<i>Type:</i> text (max 100 characters). Nullable
	The Serial number in the system firmware such as BIOS, EEPROM etc.
	Destination:
	ImportedComputer.FirmwareSerialNumber
MachineID	<i>Type</i> : text (max 100 characters). Nullable
	For AIX, it is the System ID. For HP-UX, it is the Machine/Software ID. It is unset for other platforms.
	Destination:
	ImportedComputer.MachineID
InstanceCloudID	<i>Type:</i> text (max 256 characters). Key. Nullable
	The ID of the cloud instance.
	Destination:
	<pre>ImportedCloudServiceInstance.InstanceCloudID</pre>

Column	Details
CloudServiceProvider	<i>Type</i> : text (max 256 characters). Key. Nullable A unique identifier for a cloud service provider record. Destination: ImportedCloudServiceInstance.CloudServiceProvider
InstanceAffinity	<i>Type:</i> text (max 256 characters). Nullable The affinity setting for the instance on the Dedicated Host. Destination: ImportedCloudServiceInstance.InstanceAffinity
ImageID	<i>Type</i> : text (max 256 characters). Nullable The ID of the image used to launch the instance. Destination: ImportedCloudServiceInstance.ImageID
LaunchTime	Type: datetime. Nullable The time the cloud instance was launched or the Reserved Instance started. Possible values: • yyyy/MM/dd • yyyy/MM/dd HH:mm:Ss • yyyy-MM/dd HH:mm • yyyy-MM-dd • yyyy-MM-dd • yyyy-MM-dd HH:mm:Ss • yyyy-MM-dd HH:mm:Ss • yyyy-MM-dd HH:mm • yyyyMMdd • yyyyMMdd • yyyyMMdd HH:mm:Ss • yyyyMMdd HH:mm:Ss • yyyyMMdd HH:mm:Ss • yyyyMMdd HH:mm
NetworkID	<i>Type</i> : text (max 256 characters). Nullable The ID of the Virtual Private Cloud. Destination: ImportedCloudServiceInstance.NetworkID

Column	Details
LifecycleMode	<i>Type</i> : text (max 256 characters). Nullable
	The time the instance was launched.
	Destination:
	ImportedCloudServiceInstance.LifecycleMode
Account	<i>Type:</i> text (max 256 characters). Nullable
	The Account that is used to create the instance.
	Destination:
	ImportedCloudServiceInstance.Account
ThreadsPerCore	<i>Type:</i> integer. Nullable
	The number of thread per core of the instance.
	Destination:
	ImportedCloudServiceInstance.ThreadsPerCore
InstanceType	<i>Type:</i> text (max 256 characters). Nullable
	Cloud provider instance type.
	Destination:
	<pre>ImportedCloudServiceInstance.InstanceType</pre>
Region	<i>Type:</i> text (max 256 characters). Nullable
	Region of the instance or host.
	Destination:
	ImportedCloudServiceInstance.Region
AvailabilityZone	<i>Type</i> : text (max 256 characters). Nullable
	Location of the instance or host.
	Destination:
	<pre>ImportedCloudServiceInstance.AvailabilityZone</pre>
InstanceTenancy	<i>Type</i> : text (max 256 characters). Nullable
	Instance tenancy of the instance or host
	Destination:
	<pre>ImportedCloudServiceInstance.InstanceTenancy</pre>

ConsolidatedFileEvidence Template

ConsolidatedFileEvidence provides a simpler interface to specify files and their usage on computers. It combines the computer, file evidence and usage details into a single row.

Table 881: Columns included with ConsolidatedFileEvidence templates

Column	Details
ComputerID	<i>Type</i> : big integer. Key
	The identifier used in the source connection for the computer. It must match the ComputerID from the Computer spreadsheet or the row will be ignored.
	Destination:
	ImportedInstalledFileEvidence.ExternalID
	ImportedInstalledFileEvidenceUsage.ExternalID
FileName	<i>Type:</i> text (max 256 characters). Key
	The name of the file used as evidence of software installation. For unix operating systems include the full path in the file name, including the opening '/'. For Windows operating systems the file path is specified in the FilePath column and this column must only contain the file name.
	Destination:
	ImportedFileEvidence.ExternalFileID
	ImportedFileEvidence.FileName
	ImportedInstalledFileEvidence.ExternalFileID
	ImportedInstalledFileEvidenceUsage.ExternalFileID
FileVersion	<i>Type:</i> text (max 100 characters). Key. Nullable
	The version number of the file used as evidence of software installation.
	Destination:
	ImportedFileEvidence.ExternalFileID
	ImportedFileEvidence.FileVersion
	ImportedInstalledFileEvidence.ExternalFileID
	ImportedInstalledFileEvidenceUsage.ExternalFileID
ProductVersion	<i>Type:</i> text (max 200 characters). Nullable
	The product version number in the file header.
	Destination:
	ImportedFileEvidence.ProductVersion
ProductName	<i>Type:</i> text (max 200 characters). Nullable
	The product name in the file header.
	Destination:
	ImportedFileEvidence.ProductName

Column	Details
FilePath	<i>Type:</i> text (max 400 characters). Nullable
	The path of the file used as evidence of software installation.
	Destination:
	ImportedFileEvidence.FilePath
Company	<i>Type:</i> text (max 100 characters). Key. Nullable
	The company in the file header.
	Destination:
	ImportedFileEvidence.ExternalFileID
	ImportedFileEvidence.Company
	ImportedInstalledFileEvidence.ExternalFileID
	<pre>ImportedInstalledFileEvidenceUsage.ExternalFileID</pre>
Description	<i>Type:</i> text (max 200 characters). Key. Nullable
	The description in the file header.
	Destination:
	ImportedFileEvidence.ExternalFileID
	ImportedFileEvidence.Description
	ImportedInstalledFileEvidence.ExternalFileID
	<pre>ImportedInstalledFileEvidenceUsage.ExternalFileID</pre>
FileSize	<i>Type:</i> integer. Key. Nullable
	The size of the file in bytes.
	Destination:
	ImportedFileEvidence.ExternalFileID
	ImportedFileEvidence.FileSize
	ImportedInstalledFileEvidence.ExternalFileID
	<pre>ImportedInstalledFileEvidenceUsage.ExternalFileID</pre>
Language	<i>Type:</i> text (max 200 characters). Nullable
	The language in the file header.
	Destination:
	ImportedFileEvidence.Language

Column	Details
AccessMode	<i>Type:</i> text (max 128 characters). Key. Nullable
	The access mode of the file evidence. Leave this blank unless this row is a virtualized application. In that case choose one of the values below that matches your application or desktop virtualization infrastructure. Possible values:
	Local
	• App-V
	• XenApp
	XenDesktop
	VMware View
	Office 365
	Destination:
	ImportedFileEvidence.ExternalFileID
	ImportedFileEvidence.AccessModeID
	ImportedInstalledFileEvidence.ExternalFileID
	<pre>ImportedInstalledFileEvidenceUsage.ExternalFileID</pre>
NumberOfSessions	<i>Type:</i> big integer. Nullable
	The number of sessions that the file evidence was in use by the user specified in the UserID column during the usage tracking period. If multiple users used the same application on the computer, create one row for each user with usage.
	Destination:
	ImportedInstalledFileEvidenceUsage.NumberOfSessions
StartDate	<i>Type:</i> text (max 10 characters). Nullable
	The start date of the usage. The date must be specified in the following format: 'yyyyMMdd'.
	Destination:
	ImportedInstalledFileEvidenceUsage.StartDate
LastUsedDate	<i>Type:</i> text (max 10 characters). Nullable
	The last used date of the usage. The date must be specified in the following format: 'yyyyMMdd'.
	Destination:
	ImportedInstalledFileEvidenceUsage.LastUsedDate

Column	Details
UserID	<i>Type:</i> big integer. Key. Nullable
	The DOMAIN/SAMAccountName for the user that the file evidence was used by. If this software was used by multiple users, create one row for each user of the software on the computer.
	Destination:
	<pre>ImportedInstalledFileEvidenceUsage.ExternalUserID</pre>
	ImportedUser.ExternalID
	<pre>ImportedUser.UserName (Element 2 after splitting on '\')</pre>
	ImportedUser.Domain (Element 1 after splitting on '\')
	<pre>ImportedUser.SAMAccountName (Element 2 after splitting on '\')</pre>

ConsolidatedInstallerEvidence Template

ConsolidatedInstallerEvidence provides a simpler interface to specify installed applications and their usage on computers. It combines the computer, installer evidence and usage details into a single row.

Column	Details
ComputerID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the computer. It must match the ComputerID from the Computer spreadsheet or the row will be ignored.
	Destination:
	ImportedInstalledInstallerEvidence.ExternalComputerID
	ImportedInstalledInstallerEvidenceUsage.ExternalID
	ImportedInstance.ExternalComputerID
DatabaseName	<i>Type:</i> big integer. Key. Nullable
	If this installer evidence is an Oracle database, then this field specifies the name of the database.
	Destination:
	ImportedInstalledInstallerEvidence.ExternalInstanceID
	ImportedInstalledInstallerEvidenceUsage.ExternalInstanceID
	ImportedInstance.InstanceID
	ImportedInstance.ParentInstanceID

 Table 882: Columns included with ConsolidatedInstallerEvidence templates

Column	Details
InstanceName	<i>Type</i> : big integer. Key. Nullable
	If this installer evidence is an Oracle database, then this field specifies the name of the database instance. If there are multiple instances, create a row for each instance in this spreadsheet.
	Destination:
	ImportedInstalledInstallerEvidence.ExternalInstanceID
	ImportedInstalledInstallerEvidenceUsage.ExternalInstanceID
	ImportedInstance.InstanceID
	ImportedInstance.InstanceName
DisplayName	<i>Type:</i> text (max 256 characters). Key
	The display name of the software as reported by the installer evidence. Destination:
	ImportedInstallerEvidence.ExternalInstallerID
	ImportedInstallerEvidence.DisplayName
	ImportedInstalledInstallerEvidence.ExternalInstaller EvidenceID
	ImportedInstalledInstallerEvidenceUsage.ExternalInstallerID
Version	<i>Type</i> : text (max 72 characters). Key. Nullable
	The version of the software as reported by the installer evidence.
	Destination:
	ImportedInstallerEvidence.ExternalInstallerID
	ImportedInstallerEvidence.Version
	ImportedInstalledInstallerEvidence.ExternalInstaller EvidenceID
	ImportedInstalledInstallerEvidenceUsage.ExternalInstallerID
Publisher	<i>Type</i> : text (max 200 characters). Key. Nullable
	The publisher of the software as reported by the installer evidence.
	Destination:
	ImportedInstallerEvidence.ExternalInstallerID
	ImportedInstallerEvidence.Publisher
	ImportedInstalledInstallerEvidence.ExternalInstaller EvidenceID
	ImportedInstalledInstallerEvidenceUsage.ExternalInstallerID

Column	Details
Evidence	<i>Type:</i> text (max 32 characters). Key. Nullable
	Identifier for the type of installer evidence.
	Destination:
	ImportedInstallerEvidence.ExternalInstallerID
	ImportedInstallerEvidence.Evidence
	ImportedInstalledInstallerEvidence.ExternalInstaller
	EvidenceID
	${\tt ImportedInstalledInstallerEvidenceUsage.ExternalInstallerID}$
ProductCode	<i>Type:</i> text (max 55 characters). Nullable
	The product code of the evidence. This is usually the MSI product code.
	Destination:
	ImportedInstallerEvidence.ProductCode
AccessMode	<i>Type:</i> text (max 128 characters). Key. Nullable
	The access mode of the installer evidence. Leave this blank unless this row is
	a virtualized application. In that case choose one of the values below that
	matches your application or desktop virtualization infrastructure.
	Possible values:
	• Local
	• App-V
	• XenApp
	• XenDesktop
	VMware View
	Office 365
	Destination:
	ImportedInstallerEvidence.ExternalInstallerID
	ImportedInstallerEvidence.AccessModeID
	ImportedInstalledInstallerEvidence.ExternalInstaller
	EvidenceID
	${\tt ImportedInstalledInstallerEvidenceUsage.ExternalInstallerID}$
InstallDate	<i>Type:</i> text (max 10 characters). Nullable
	The install date of the installer evidence. The date must be specified in the following format: 'yyyyMMdd'.
	Destination:
	ImportedInstalledInstallerEvidence.InstallDate

Column	Details
DiscoveryDate	<i>Type</i> : text (max 10 characters). Nullable
	The date that the installer evidence was first seen. The date must be specified in the following format: 'yyyyMMdd'.
	Destination:
	ImportedInstalledInstallerEvidence.DiscoveryDate
NumberOfSessions	<i>Type</i> : big integer. Nullable
	The number of sessions that the installer evidence was in use by the user specified in the UserID column during the usage tracking period. If multiple users used the same application on the computer, create one row for each user with usage.
	Destination:
	ImportedInstalledInstallerEvidenceUsage.NumberOfSessions
StartDate	<i>Type:</i> text (max 10 characters). Nullable
	The start date of the usage. The date must be specified in the following format: 'yyyyMMdd'.
	Destination:
	ImportedInstalledInstallerEvidenceUsage.StartDate
LastUsedDate	<i>Type:</i> text (max 10 characters). Nullable
	The last used date of the usage. The date must be specified in the following format: 'yyyyMMdd'.
	Destination:
	ImportedInstalledInstallerEvidenceUsage.LastUsedDate
UserID	<i>Type:</i> big integer. Key. Nullable
	The DOMAIN/SAMAccountName for the user that the installer evidence was used by. If this software was used by multiple users, create one row for each user of the software on the computer.
	Destination:
	ImportedInstalledInstallerEvidenceUsage.ExternalUserID
	ImportedUser.ExternalID
	ImportedUser.UserName (Element 2 after splitting on '\')
	ImportedUser.Domain (Element 1 after splitting on '\')
	<pre>ImportedUser.SAMAccountName (Element 2 after splitting on '\')</pre>

ConsolidatedOracleDatabaseUser Template

ConsolidatedOracleDatabaseUser provides a list of the users for each Oracle database instance.

Column	Details
UserID	<i>Type</i> : big integer. Key
	The identifier used in the source connection for the instance end-user. This may be an integer or a string.
	Destination:
	ImportedInstanceUser.ExternalID
	ImportedLicenseUser.ExternalID
ComputerID	<i>Type:</i> big integer. Key
	The identifier used in the source connection for the computer. It must match the ComputerID from the Computer spreadsheet or the row will be ignored.
	Destination:
	ImportedInstanceUser.ExternalID
	ImportedInstanceUser.ComputerID
	ImportedLicenseUser.ExternalID
DatabaseName	<i>Type</i> : big integer. Key
	This field specifies the name of the database. It must match a row in the InstallerEvidence spreadsheet for the same ComputerID or this row will be skipped.
	Destination:
	ImportedInstanceUser.ExternalID
	ImportedInstanceUser.InstanceID
	ImportedLicenseUser.ExternalID
InstanceName	<i>Type</i> : big integer. Key
	This field specifies the name of the database instance. If there are multiple instances, create a row for each instance in this spreadsheet. It must match a row in the InstallerEvidence spreadsheet for the same ComputerID and DatabaseName or this row will be skipped.
	Destination:
	ImportedInstanceUser.ExternalID
	ImportedInstanceUser.InstanceID
	ImportedLicenseUser.ExternalID
Name	<i>Type</i> : text (max 256 characters)
	The name of the user.
	Destination:
	ImportedLicenseUser.UserName

 Table 883: Columns included with ConsolidatedOracleDatabaseUser templates

Column	Details
AccountStatus	<i>Type:</i> text (max 256 characters). Nullable
	The current status of the end-user account.
	Destination:
	ImportedInstanceUser.AccountStatus
CreationDate	<i>Type:</i> datetime. Nullable
	The date and time when the end-user was created. The date must be entered in one of the supported formats.
	Possible values:
	• yyyy/MM/dd
	• yyyy/MM/dd HH:mm:Ss
	• yyyy/MM/dd HH:mm
	• yyyy-MM-dd
	• yyyy-MM-dd HH:mm:Ss
	• yyyy-MM-dd HH:mm
	• yyyyMMdd
	• yyyyMMdd HH:mm:Ss
	• yyyyMMdd HH:mm
	Destination:
	ImportedInstanceUser.CreationDate

Column	Details
LastLogonDate	<i>Type</i> : datetime. Nullable
	The date and time when the end-user last logged on to the computer. The date must be entered in one of the supported formats.
	Possible values:
	• yyyy/MM/dd
	• yyyy/MM/dd HH:mm:Ss
	• yyyy/MM/dd HH:mm
	• yyyy-MM-dd
	• yyyy-MM-dd HH:mm:Ss
	• yyyy-MM-dd HH:mm
	• yyyyMMdd
	• yyyyMMdd HH:mm:Ss
	• yyyyMMdd HH:mm
	Destination:
	ImportedInstanceUser.LastLogonDate
DefaultTablespace	<i>Type</i> : text (max 256 characters). Nullable
	The default tablespace for an Oracle end-user.
	Destination:
	ImportedInstanceUser.DefaultTablespace
TempTablespace	<i>Type</i> : text (max 256 characters). Nullable
	The temporary tablespace for an Oracle end-user.
	Destination:
	ImportedInstanceUser.TempTablespace
DisplayName	<i>Type</i> : text (max 256 characters). Key
	The display name of the software as reported by the installer evidence. It must match a row in the InstallerEvidence spreadsheet for the same ComputerID, Version, Publisher, DatabaseName and InstanceName or this row will be skipped.
	Destination:
	ImportedInstanceUser.ApplicationID

Column	Details
Version	<i>Type:</i> text (max 72 characters). Key
	The version of the software as reported by the installer evidence. It must match a row in the InstallerEvidence spreadsheet for the same ComputerID, DisplayName, Publisher, DatabaseName and InstanceName or this row will be skipped.
	Destination:
	ImportedInstanceUser.ApplicationID
Publisher	<i>Type:</i> text (max 200 characters). Key
	The publisher of the software as reported by the installer evidence. It must match a row in the InstallerEvidence spreadsheet for the same ComputerID, DisplayName, Version, DatabaseName and InstanceName or this row will be skipped.
	Destination:
	ImportedInstanceUser.ApplicationID
Evidence	<i>Type:</i> text (max 32 characters). Key. Nullable
	Identifier for the type of installer evidence.
	Destination:
	ImportedInstanceUser.ApplicationID
AccessMode	Type: text (max 128 characters). Key. Nullable
	The access mode of the installer evidence. Leave this blank unless this row is a virtualized application. In that case choose one of the values below that matches your application or desktop virtualization infrastructure. Possible values:
	• Local
	• App-V
	• XenApp
	XenDesktop
	VMware View
	Office 365
	Destination:
	ImportedInstanceUser.ApplicationID

ConsolidatedRemoteAccessFile Template

The RemoteAccessFile spreadsheet is used for capturing application virtualization information. Systems such as Microsoft AppV and Citrix XenApp allow a user to access applications that are not installed on a local computer. This object allows you to provide applications that a user may access by specifying the file evidence.

When populating the RemoteAccessFile template, please note that an application can be identified by file evidence. If the evidence does not match the ARL then no application will be created. The evidence not recognised will appear under the 'Unrecognised Evidence' screen within Flexnet Manager Suite. From there, you may create applications for any unrecognised evidence as required, and lastly ensure any new application relates to a license. This results in the evidence now being recognised for the new application and may cause license consumption after the next reconciliation. This application virtualization access using files is a special case in application matching. It does not require a mandatory file link to the application and can user a 'not for recognition' file to link to an application. This is because application and desktop virtualization systems rarely provide enough file information for more complex application recognition rules to function.

If entering file evidence, you must provide the following key identifier fields. + 1 = FileName

The following identifier fields are typically requried for matching evidence in the ARL, however are not mandatory. + 1 = Company + 2 = FileVersion + 3 = Description + 4 = FileSize

File evidence does not have to be specified in the FileEvidence spreadsheet as well as here.

Column	Details
ServerID	<i>Type:</i> big integer. Key
	This is the ComputerID of the server that publishes this virtual application. The ComputerID must match a computer from the Computer spreadsheet, and that computer must have an installation of the application this file is part of. If the server does not have an installation of an appropriate application then the user will not be shown as having access to that application. This is a mandatory field.
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalServerID
FileName	<i>Type:</i> text (max 256 characters). Key
	The name of the file used as evidence of software installation. For unix operating systems include the full path in the file name, including the opening '/'. For Windows operating systems the file path is specified in the FilePath column and this column must only contain the file name.
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalFileID
	ImportedFileEvidence.ExternalFileID
	ImportedFileEvidence.FileName

Table 884: Columns included with ConsolidatedRemoteAccessFile templates

Destination:	racters). Key. Nullable the file used as evidence of software installation.
Destination:	the file used as evidence of software installation.
ImportedRemoteUserT	
r · · · · · · · · · · · · · · · · · · ·	OApplicationAccess.ExternalFileID
ImportedFileEvidenc	e.ExternalFileID
ImportedFileEvidenc	e.FileVersion
ProductVersion <i>Type</i> : text (max 200 char	racters). Nullable
The product version nur	mber in the file header.
Destination:	
ImportedFileEvidenc	e.ProductVersion
ProductName <i>Type:</i> text (max 200 char	racters). Nullable
The product name in the	e file header.
Destination:	
ImportedFileEvidenc	e.ProductName
FilePathType: text (max 400 char	racters). Nullable
The path of the file used	d as evidence of software installation.
Destination:	
ImportedFileEvidenc	e.FilePath
Company <i>Type:</i> text (max 100 char	racters). Key. Nullable
The company in the file	header.
Destination:	
ImportedRemoteUserT	OApplicationAccess.ExternalFileID
ImportedFileEvidenc	e.ExternalFileID
ImportedFileEvidenc	e.Company
Description Type: text (max 200 char	racters). Key. Nullable
The description in the fi	le header.
Destination:	
ImportedRemoteUserT	oApplicationAccess.ExternalFileID
ImportedFileEvidenc	e.ExternalFileID
ImportedFileEvidenc	e.Description

Column	Details
FileSize	<i>Type:</i> integer. Key. Nullable
	The size of the file in bytes.
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalFileID
	ImportedFileEvidence.ExternalFileID
	ImportedFileEvidence.FileSize
Language	<i>Type:</i> text (max 200 characters). Nullable
	The language in the file header.
	Destination:
	ImportedFileEvidence.Language
UserID	<i>Type:</i> big integer. Key
	The UserID must be populated with the fully qualified name e.g. Mydomain\ JohnSmith. If not then a User is not created.
	If fully qualified then this field populates the following user related fields. + 1 = The user name of the end-user from the text following the "". + 2 = The login name (SAM account name) of the end-user from the text following the "". + 3 = The domain name of the end-user from the text before the "".
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalUserID
	ImportedUser.ExternalID
	ImportedUser.UserName (Element 2 after splitting on '\')
	ImportedUser.Domain (Element 1 after splitting on '\')
	<pre>ImportedUser.SAMAccountName (Element 2 after splitting on '\')</pre>

Column	Details
AccessMode	<i>Type:</i> text (max 128 characters). Key. Nullable
	The AccessMode states how an application has been accessed.
	Possible values:
	• Local
	• App-V
	• XenApp
	XenDesktop
	VMware View
	Office 365
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalFileID
	ImportedRemoteUserToApplicationAccess.AccessModeID
	ImportedFileEvidence.ExternalFileID
	ImportedFileEvidence.AccessModeID

ConsolidatedRemoteAccessInstaller Template

The RemoteAccessInstaller spreadsheet is used for capturing application virtualization information. Systems such as Microsoft AppV and Citrix XenApp allow a user to access applications that are not installed on a local computer. This object allows you to provide applications that a user may access by specifying the installer evidence.

When populating the RemoteAccessInstaller, please note that an application can be identified by installer evidence. If the evidence does not match the ARL then no application will be created. The evidence not recognised will appear under the 'Unrecognised Evidence' screen within Flexnet Manager Suite. From there, you may create applications for any unrecognised evidence as required, and lastly ensure any new application relates to a license. This results in the evidence now being recognised for the new application and may cause license consumption after the next reconciliation.

If entering installer evidence, you must provide the following key identifier fields. + 1 = DisplayName

The following identifier fields are typically requried for matching evidence in the ARL, however are not mandatory. + 1 =Version + 2 = Publisher + 3 = Evidence

Installer evidence does not have to be specified in the InstallerEvidence spreadsheet as well as here.

Column	Details
DisplayName	<i>Type:</i> text (max 256 characters). Key
	The display name of the software as reported by the installer evidence and is part of the unique identifier for installer evidence.
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalInstaller EvidenceID
	ImportedInstallerEvidence.ExternalInstallerID
	ImportedInstallerEvidence.DisplayName
Version	<i>Type:</i> text (max 72 characters). Key
	The version of the software as reported by the installer evidence and is part of the unique identifier for installer evidence.
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalInstaller
	EvidenceID
	ImportedInstallerEvidence.ExternalInstallerID
	ImportedInstallerEvidence.Version
Publisher	<i>Type</i> : text (max 200 characters). Key
	Publishers of software applications (for example, "Microsoft") as reported by the installer evidence and publisher is part of the unique identifier for installer evidence.
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalInstaller EvidenceID
	ImportedInstallerEvidence.ExternalInstallerID
	ImportedInstallerEvidence.Publisher
Evidence	<i>Type:</i> text (max 32 characters). Key
	The evidence type of the software as reported by the installer evidence and is part of the unique identifier for installer evidence.
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalInstaller EvidenceID
	ImportedInstallerEvidence.ExternalInstallerID
	ImportedInstallerEvidence.Evidence

Table 885: Columns included with ConsolidatedRemoteAccessInstaller templates

Column	Details
ProductCode	<i>Type:</i> text (max 55 characters). Nullable
	The product code of the evidence. This is usually the MSI product code and is not part of the unique identifier.
	Destination:
	ImportedInstallerEvidence.ProductCode
UserID	<i>Type:</i> big integer. Key
	The UserID must be populated with the fully qualified name e.g. Mydomain\ JohnSmith. If not then a User is not created.
	If fully qualified then this field populates the following user related fields. + 1 = The user name of the end-user from the text following the "". + 2 = The login name (SAM account name) of the end-user from the text following the "". + 3 = The domain name of the end-user from the text before the "".
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalUserID
	ImportedUser.ExternalID
	<pre>ImportedUser.UserName (Element 2 after splitting on '\')</pre>
	<pre>ImportedUser.Domain (Element 1 after splitting on '\')</pre>
	<pre>ImportedUser.SAMAccountName (Element 2 after splitting on '\')</pre>
AccessMode	<i>Type:</i> text (max 128 characters). Key. Nullable
	The AccessMode states how an application has been accessed.
	Possible values:
	• Local
	• App-V
	• XenApp
	• XenDesktop
	VMware View
	Office 365
	Destination:
	ImportedRemoteUserToApplicationAccess.ExternalInstaller EvidenceID
	ImportedRemoteUserToApplicationAccess.AccessModeID
	ImportedInstallerEvidence.ExternalInstallerID
	ImportedInstallerEvidence.AccessModeID

ConsolidatedVMPool Template

The VMPool spreadsheet provides a simple method to associate virtual machines with groups (pools) on their host.

Table 886: Columns included with ConsolidatedVMPool templates

Column	Details
PoolName	<i>Type</i> : text (max 100 characters). Key
	The name of the pool.
	Destination:
	ImportedVMPool.PoolName
ParentName	<i>Type</i> : text (max 100 characters). Nullable
	The name of the parent pool.
	Destination:
	ImportedVMPool.ParentName
PoolFriendlyName	<i>Type</i> : text (max 256 characters)
	The friendly name of the pool.
	Destination:
	ImportedVMPool.PoolFriendlyName
HostComputerID	<i>Type</i> : big integer. Key
	The identifier used in the source connection for the computer which is hosting the pool. The HostComputerID should match the ComputerID in the Computer spreadsheet. Otherwise the record will be ignored.
	Destination:
	ImportedVMPool.HostComputerID

Column	Details
ObjectType	<i>Type:</i> text (max 256 characters). Key. Nullable The type of pool. Possible values:
	• Folder
	Datacenter
	ComputeResource
	HostSystem
	ResourcePool
	VirtualMachine
	PhysicalSharedPool
	VirtualSharedPool
	• LPAR
	• RSET
	ClusterComputeResource
	• PSET
	Destination:
	<pre>ImportedVMPool.ObjectType</pre>
ComplianceConnectionID	<i>Type:</i> integer. Key. Nullable The identifier for a data source connection in the ComplianceConnection table. Destination: ImportedVMPool.ComplianceConnectionID
	<i>Type:</i> text (max 256 characters). Nullable
ParentObjectType	The type of pool of the parent.
	Destination:
	ImportedVMPool.ParentObjectType
NumberOfProcessors	<i>Type:</i> decimal. Nullable
	The number of processors in this pool.
	Possible values: 120.45
	Destination:
	ImportedVMPool.NumberOfProcessors

Column	Details
NumberOfCores	<i>Type:</i> decimal. Nullable
	The number of cores in this pool.
	Possible values:
	120.45
	Destination:
	ImportedVMPool.NumberOfCores

ConsolidatedWMIEvidence Template

ConsolidatedWMIEvidence provides a simpler interface to specify Windows Management Instrumentation (WMI) properties on computers. Other Web-Based Enterprise Management (WBEM) properties are supported from Unix computers as well. The most important data to provide in this spreadsheet is operating system installs. The 'Win32_OperatingSystem' class and the 'Name' property contains this data.

Table 887: Columns included with ConsolidatedWMIEvidence templa	ates
---	------

Column	Details	
ComputerID	<i>Type:</i> big integer. Key	
	The identifier used in the source connection for the computer. It must match the ComputerID from the Computer spreadsheet or the row will be ignored.	
	Destination:	
	ImportedInstalledWMIEvidence.ExternalComputerID	
ClassName	<i>Type:</i> text (max 50 characters). Key	
	The WMI class name of the evidence. An example is 'Win32_OperatingSystem'.	
	Destination:	
	ImportedWMIEvidence.ExternalEvidenceID	
	ImportedWMIEvidence.ClassName	
	ImportedInstalledWMIEvidence.ExternalEvidenceID	
PropertyName	<i>Type:</i> text (max 50 characters). Key	
	The WMI property name of the WMI evidence. An example is 'Name'.	
	Destination:	
	ImportedWMIEvidence.ExternalEvidenceID	
	ImportedWMIEvidence.PropertyName	
	<pre>ImportedInstalledWMIEvidence.ExternalEvidenceID</pre>	

Column	Details
PropertyValue	<i>Type:</i> text (max 256 characters). Key
	The value of the property of the WMI evidence. An example is 'Microsoft Windows 7 Enterprise'
	Destination:
	ImportedWMIEvidence.ExternalEvidenceID
	ImportedWMIEvidence.PropertyValue
	ImportedInstalledWMIEvidence.ExternalEvidenceID
InstanceName	<i>Type:</i> text (max 256 characters). Key. Nullable
	The name of the WMI class instance. This is important when there a multiple instances of a WMI class on a computer. An example is the 'Win32_VideoController' class that may have many instances with the same properties. In this case you need to specify the name of the instance here, 'Intel(R) HD Graphics Family' or 'NVIDIA Quadro K2100M' for example.
	Destination:
	ImportedWMIEvidence.ExternalEvidenceID
	ImportedInstalledWMIEvidence.ExternalEvidenceID
	ImportedInstalledWMIEvidence.InstanceName

Flexera Data Models

FlexNet Manager Suite includes Flexera Analytics, a technology that enables you to create reports and to customize dashboards, either for your enterprise or for personal use. You can build and/or customize reports and dashboards using data contained in the Flexera data models.

To help you use this data when customizing dashboards, widgets, and reports, Flexera Analytics provides two data models that organize your asset-management data and define how the data relates to each another. Within the data models, folders organize and structure the data into subject-area categories. Each folder in the subject area contains two types of data: measures and attributes. Measures represent numbers and facts, and attributes represent categories of descriptive data.

The two data models are:

- Relational model (see Relational model)
- Dimensional model (see Dimensional model)

Note: It is recommended that you use data from one data model or the other when creating widgets and dashboards. You need to keep this in mind and plan ahead before you begin to create a dashboard.

	Add

Relational model

The relational model organizes data using measures and attributes but uses a flat structure. There is no ability to drill up or drill down on units of data to see how other data relates to them. There are also some attributes and measures that are specific to the relational model, such as the Inventory subject area.

Dimensional model

The dimensional model organizes data using measures and attributes but uses a hierarchy structure that enables you to drill up and drill down to see how data relates to other functionality.

Figure 11: Dimensional model

Relational Model Categories

The set of data categories in the relational model documented here includes:

• Publisher Filter (see Publisher Filter)

- Applications (see Applications)
- Application Installations (see Application Installations)
- Licenses (see Licenses)
- Assets (see Assets)
- Inventory (see Inventory)
- Contracts (see Contracts)
- Purchases (see Purchases).

Publisher Filter

Use this attribute when creating and customizing the Publisher filter widget in Flexera Analytics.

Folder	Measure/Attribute	Description
Publisher filter	Publisher filter	An attribute that describes the Publisher name of an application.

Applications

Folder	Measure/Attribute	Description
Application measures	Installation count	A measure that defines the number of installations of a single application.
	Unlicensed installation count	A measure that defines the number of installations of a single application that do not have an associated license.
	Installed application count	A measure that defines the number of applications that report a valid installation.
Application	Publisher and Product	A combined attribute that describes the Publisher name and Product name of an application.
Application category	Application category	An attribute that describes the category of an application. For example, Software, File Versioning, Data Management, etc.
Application classification	Application category	An attribute that describes the classification of an application. For example, Commercial, Freeware, Component, etc.
Application status	Application status	An attribute that describes the status of an application. For example, Authorized, Unauthorized, Unmanaged, etc.
EOSL Filter	End of extended support (90 days)	A measure that defines applications whose end of extended support is within 90 days.

Folder	Measure/Attribute	Description
	End of life (90 days)	A measure that defines applications whose end of life is within 90 days.
	End of sales (90 days)	A measure that defines applications whose end of sales is within 90 days.
	End of support (90 days)	A measure that defines applications whose end of support is within 90 days.

Application Installations

Use these measures and attributes when creating and customizing widgets related to application installations in Flexera Analytics.

Folder	Measure/Attribute	Description
Application Installation cour installation measures		A measure that defines the number of installations for all applications.
	Installation count (<= 90 days)	A measure that defines the number of installations for all applications in the last 90 days.

Licenses

Folder	Measure/ Attribute	Description
License measures	Entitlement count	A measure that defines the total number of entitlements.
	Consumption count	A measure that defines the number of entitlements consumed.
	Installation count	A measure that defines the number of installations by device.
	Over- consumption count	A measure that defines the number of licenses at risk to expire or exceed entitlement.
	Financial risk	A measure that defines the dollar amount associated with the licenses at risk to expire or exceed entitlement.
	Consumption %	A measure that defines the percentage of entitlements in use.

Folder	Measure/ Attribute	Description
License	Publisher and product	A combined attribute that describes the Publisher name and Product name of a license.
	License name	An attribute that describes the name of the license entitled.
License classification	License classification	An attribute that describes the classification of a license. For example, "Commercial," "Freeware," "Component," etc.

Assets

Use these measures and attributes when creating and customizing widgets related to assets in Flexera Analytics.

Folder	Measure/Attribute	Description
Asset measures	Asset count	A measure that defines the number of hardware assets.
Asset status	Asset status	An attribute that describes the status of a hardware asset. For example, Installed, Disposed, In Storage, Purchased, etc.
Asset type	Asset type	An attribute that describes the type of a hardware asset. For example, Workstation, Laptop, Server, etc.
Asset activity measures	New asset count (<= 30 days)	A measure that defines the number of hardware assets acquired in the last 30 days.
	Reported inventory count (> 30 days)	A measure that defines the number of hardware assets reported in inventory more than 30 days ago.

Inventory

Folder	Measure/Attribute	Description
Duplicate device name	Inventory device name	An attribute that describes the duplicate hostname for a device.
	Duplicate count	A measure that defines the number of duplicate devices.
Duplicate serial number	Serial number	An attribute that describes the duplicate serial number for a device.
	Duplicate count	A measure that defines the number of duplicate devices.
Discovered devices activity	Missing inventory count (<= 90 days)	A measure that defines the number of devices missing an inventory count in the last 90 days.

Contracts

Folder	Measure/ Attribute	Description
Contract measures	Contract amount	A measure that defines the amount of the contract, in dollars.
	Contract count	A measure that defines the total number of contracts.
Contract linked status	IsLinkedToLicense	An attribute that defines whether the contract is linked to a license.
Contract	Contract	Attribute that defines the contract ID or number.
	Contract name	An attribute that defines the name of the contract.
	Contract expiry date	An attribute that defines the date the contract expires.
	Contract review date	An attribute that defines the date the contract will be reviewed.
	Contract renewal date	An attribute that defines that date that the contract will be renewed.
	Is evergreen	An attribute that defines whether the contract will have an expiry date. If there is no expiry date, the conract is considered evergreen.
Contract status	Contract status	An attribute that defines the status of a contract, such as "Active," "Cancelled," or "Expired," etc.
Contract type	Contract type	An attribute that defines the contract type such as "Hardware maintenance and support," "Software license," "Software maintenance and support, etc."
Contract event filter	Contracts expiring within (30 days)	A measure that defines contracts that expire in 30 days.
	Contracts expiring within (45 days)	A measure that defines contracts that expire in 45 days.
	Contracts expiring within (90 days)	A measure that defines contracts that expire in 90 days.
	Contracts for renewal within (30 days)	A measure that defines contracts that will be renewed in 30 days.
	Contracts for renewal within (45 days)	A measure that defines contracts that will be renewed in 45 days.

Folder	Measure/ Attribute	Description
	Contracts for renewal within (90 days)	A measure that defines contracts that will be renewed in 90 days.
	Contracts for review within (30 days)	A measure that defines contracts that will be reviewed in 30 days.
	Contracts for review within (45 days)	A measure that defines contracts that will be reviewed in 45 days.
	Contracts for review within (90 days)	A measure that defines contracts that will be reviewed in 90 days.

Purchases

Folder	Measure/ Attribute	Description
Lastest purchase measures	Pruchase amount	A measure that defines the purchase amount over the last 30 days, in dollars.
	Effective quantity	A measure that defines the total number of license entitlemets brought in by a purchase.
	Purchase count	A measure that defines the total number of purchases over the last 30 days.
Purchase spend measures	Purchase spent	A measure that defines the purchase amount, in dollars, of purchases that have been bought in the last 12 months.
Unprocessed purchases	Available entitlements	A measure that defines the number of entitlements that are available with this purchase.
	Unprocessed purchase count	A measure that defines the number of unprocessed purchases.
Purchase	Purchase No	An attribute that defines the purchase number.
	Purchase description	An attribute that describes the product, such as "Windows Web Server," "Outlook 2016," etc.
	Purchase date	An attribute that defines the date of the purchase.
	Creation date	An attribute that defines the date the purchase record was created.

Folder	Measure/ Attribute	Description
	Publisher name	An attribute that defines the publisher name of the purchase such as "Adobe," "IBM," and "Microsoft," etc.
	Vendor name	An attribute that defines the vendor name of the purchase, such as "Adobe," "IBM," and "Microsoft," etc.
Purchase type	Purchase type	An attribute that defines the purchase type, such as "Hardware," "Service," or "Software," etc.
Purchase status	Purchase status	An attribute that defines the status of the purhcase such as "Cancelled," "Completed," "New," or "Pending."

Dimensional Model Categories

The set of data categories in the dimensional model documented here includes:

- Publish Filter (see Publisher Filter)
- Applications (see Applications)
- Application Installations (see Application Installations)
- Licenses (see Licenses)
- Assets (see Assets)
- Contracts (see Contracts)
- Purchases (see Purchases).

Publisher Filter

Use this attribute when creating and customizing the Publisher filter widget in Flexera Analytics.

Folder	Measure/Attribute	Description
Publisher filter	Publisher filter	An attribute that describes the Publisher name of an application.

Applications

Use these measures and attributes when creating and customizing widgets related to applications in Flexera Analytics.

Folder	Measure/Attribute	Description
Application measures	Installation count	A measure that defines the number of installations of a single application.
	Unlicensed installation count	A measure that defines the number of installations of a single application that do not have an associated license.
	Installed application count	A measure that defines the number of applications that report a valid installation.
Application	Publisher and Product	A combined attribute that describes the Publisher name and Product name of an application.
Application category	Application category	An attribute that describes the category of an application. For example, Software, File Versioning, Data Management, etc.
Application classification	Application category	An attribute that describes the classification of an application. For example, Commercial, Freeware, Component, etc.
Application status	Application status	An attribute that describes the status of an application. For example, Authorized, Unauthorized, Unmanaged, etc.
EOSL Filter	End of extended support (90 days)	A measure that defines applications whose end of extended support is within 90 days.
	End of life (90 days)	A measure that defines applications whose end of life is within 90 days.
	End of sales (90 days)	A measure that defines applications whose end of sales is within 90 days.
	End of support (90 days)	A measure that defines applications whose end of support is within 90 days.

Application Installations

Folder	Measure/Attribute	Description
Application installation measures	Installation count	A measure that defines the number of installations for all applications.
	Installation count (<= 90 days)	A measure that defines the number of installations for all applications in the last 90 days.

Licenses

Use these measures and attributes when creating and customizing widgets related to licenses in Flexera Analytics.

Folder	Measure/ Attribute	Description
License measures	Entitlement count	A measure that defines the total number of entitlements.
	Consumption count	A measure that defines the number of entitlements consumed.
	Installation count	A measure that defines the number of installations by device.
	Over- consumption count	A measure that defines the number of licenses at risk to expire or exceed entitlement.
	Financial risk	A measure that defines the dollar amount associated with the licenses at risk to expire or exceed entitlement.
	Consumption %	A measure that defines the percentage of entitlements in use.
License	Publisher and product	A combined attribute that describes the Publisher name and Product name of a license.
	License name	An attribute that describes the name of the license entitled.
License classification	License classification	An attribute that describes the classification of a license. For example, "Commercial," "Freeware," "Component," etc.

Assets

Folder	Measure/Attribute	Description
Asset measures	Asset count	A measure that defines the number of hardware assets.
Asset status	Asset status	An attribute that describes the status of a hardware asset. For example, Installed, Disposed, In Storage, Purchased, etc.
Asset type	Asset type	An attribute that describes the type of a hardware asset. For example, Workstation, Laptop, Server, etc.
Asset activity measures	New asset count (<= 30 days)	A measure that defines the number of hardware assets acquired in the last 30 days.

Folder Measure/Attribute Description

Reported inventory count (> 30 days) A measure that defines the number of hardware assets reported in inventory more than 30 days ago.

Contracts

Folder	Measure/ Attribute	Description
Contract measures	Contract amount	A measure that defines the amount of the contract, in dollars.
	Contract count	A measure that defines the total number of contracts.
Contract linked status	IsLinkedToLicense	An attribute that defines whether the contract is linked to a license.
Contract	Contract	Attribute that defines the contract ID or number.
	Contract name	An attribute that defines the name of the contract.
	Contract expiry date	An attribute that defines the date the contract expires.
	Contract review date	An attribute that defines the date the contract will be reviewed.
	Contract renewal date	An attribute that defines that date that the contract will be renewed.
	Is evergreen	An attribute that defines whether the contract will have an expiry date. If there is no expiry date, the conract is considered evergreen.
Contract status	Contract status	An attribute that defines the status of a contract, such as "Active," "Cancelled," or "Expired," etc.
Contract type	Contract type	An attribute that defines the contract type such as "Hardware maintenance and support," "Software license," "Software maintenance and support, etc."
Contract event filter	Contracts expiring within (30 days)	A measure that defines contracts that expire in 30 days.
	Contracts expiring within (45 days)	A measure that defines contracts that expire in 45 days.
	Contracts expiring within (90 days)	A measure that defines contracts that expire in 90 days.

Folder	Measure/ Attribute	Description
	Contracts for renewal within (30 days)	A measure that defines contracts that will be renewed in 30 days.
	Contracts for renewal within (45 days)	A measure that defines contracts that will be renewed in 45 days.
	Contracts for renewal within (90 days)	A measure that defines contracts that will be renewed in 90 days.
	Contracts for review within (30 days)	A measure that defines contracts that will be reviewed in 30 days.
	Contracts for review within (45 days)	A measure that defines contracts that will be reviewed in 45 days.
	Contracts for review within (90 days)	A measure that defines contracts that will be reviewed in 90 days.

Purchases

Folder	Measure/ Attribute	Description
Lastest purchase measures	Pruchase amount	A measure that defines the purchase amount over the last 30 days, in dollars.
	Effective quantity	A measure that defines the total number of license entitlemets brought in by a purchase.
	Purchase count	A measure that defines the total number of purchases over the last 30 days.
Purchase spend measures	Purchase spent	A measure that defines the purchase amount, in dollars, of purchases that have been bought in the last 12 months.
Unprocessed purchases	Available entitlements	A measure that defines the number of entitlements that are available with this purchase.
	Unprocessed purchase count	A measure that defines the number of unprocessed purchases.

Folder	Measure/ Attribute	Description
Purchase	Purchase No	An attribute that defines the purchase number.
	Purchase description	An attribute that describes the product, such as "Windows Web Server," "Outlook 2016," etc.
	Purchase date	An attribute that defines the date of the purchase.
	Creation date	An attribute that defines the date the purchase record was created.
	Publisher name	An attribute that defines the publisher name of the purchase such as "Adobe," "IBM," and "Microsoft," etc.
	Vendor name	An attribute that defines the vendor name of the purchase, such as "Adobe," "IBM," and "Microsoft," etc.
Purchase type	Purchase type	An attribute that defines the purchase type, such as "Hardware," "Service," or "Software," etc.
Purchase status	Purchase status	An attribute that defines the status of the purhcase such as "Cancelled," "Completed," "New," or "Pending."
